Re: License No. SUA-1471

Dear Mr. Hall:

As per the annual soil sampling and gamma survey report submitted September 28, 1990, the attached map shows the results of the resampling performed.

The area on the NW sector exceeding 10.5 pCi/g Ra226 has been scraped and is being resampled to insure the area is below 10.5 pCi/g Ra226. The area being scraped is believed to be an isolated area previously missed during the initial soil cleanup.

The resurvey of all other areas, where initial samples indicated Ra226 greater than 10.5 pCi/g, show to be well below 10.5 pCi/g Ra226.

If you have any questions or comments please don't hesitate to contact me.

Very truly yours,

HOMESTAKE MINING COMPANY
