Response Update to NRC Generic Letter 89-13
Service Water System Problems Affecting Safety-Related Equipment

Reference: Letter from T M Parker (NSP) to Director of NRR dated January 29, 1990 titled: "Response to Generic Letter 89-13 Service Water System Problems Affecting Safety-Related Equipment"

We originally responded to Generic Letter 89-13 on January 29, 1990 (see above Reference). On page 3 of our response, we stated that we would complete a study of the effectiveness of our chlorination (biocide) program by December 31, 1990. However, we are in the process of replacing the chlorination system with a hypobromous acid feed system in order to eliminate the hazards associated with the storage of chlorine onsite. Therefore, the study of the effectiveness of our biocide program will continue after the new system has been placed in service. We will complete this study by July 1, 1991.

Please contact us if you have any questions related to our updated response.
