Gentlemen:

Licensee Event Report (LER) 90-17 discusses a possible common mode failure of the instrument channels which provide the primary trip protection for a total loss of forced reactor coolant flow. In the LER, Portland General Electric Company (PGE) committed to revise Chapter 15 of the Final Safety Analysis Report (FSAR) by December 31, 1990 and to inform the Nuclear Regulatory Commission (NRC) of our plans for restoration of departure from nucleate boiling (DNB) margin by January 31, 1991.

PGE is still committed to informing the NRC of the plans for restoration of the DNB margin by January 31, 1991. However, the plans for restoration will affect the revision to Chapter 15 of the FSAR. Therefore, PGE will address the plans for revising Chapter 15 in the January 31, 1991 submittal.

Sincerely,

W. R. Robinson for
W. R. Robinson
General Manager
Trojan Nuclear Plant
