License No. 12-20227-01

As a result of the inspection conducted on October 14, 1982, and in accordance with the NRC Enforcement Policy, 47 FR 9987 (March 9, 1982), the following violations were identified:

1. License Condition No. 16 states: The licensee shall conduct a physical inventory every six months to account for all sealed sources received and possessed under the license. The record of inventory shall include the quantities and kinds of byproduct material, location of sealed sources, and the date of the inventory.

Contrary to this requirement, as of the date of this inspection a physical inventory of sealed sources has not been conducted.

This is a Severity Level IV violation (Supplement VI).

2. 10 CFR 71.5 states: No licensee shall transport any licensed material unless the licensee complies with the applicable requirements of the regulations of the Department of Transportation in 49 CFR Parts 170 through 189.

Contrary to this requirement, as of the date of this inspection a complete certification of the package used to transport the sources for the calibrations of dose calibrator units was not available in accordance with 49 CFR 173.395(a) such that the packaging design for the specific material transported was not included. The certification available from the licensee included packaging design for carrying shielded syringes; however, the certification did not take into account shields of different geometrical configurations and sizes. In addition, the yellow labels affixed to the packages were not complete with information as required by 49 CFR 172.403.

This is a Severity Level IV violation (Supplement V).

3. 10 CFR 19.11(a) and/or (b) states: each licensee shall post current copies of the documents specified in this regulation or may post a notice which describes these documents and states where they may be located and examined.
