EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

[0] [2] During plant operation, the RCIC System automatically isolated twice due to the
 [0] [3] receipt of spurious steam line ambient temperature high signals. In accordance with
 [0] [4] technical specifications an LCO was initiated on the RCIC System. At the time of this
 [0] [5] event the HPCI System was operable. This event did not affect the health and safety
 [0] [6] of the public.

Technical Specifications 3.3.2, 3.7.4, 6.9.1.9b

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

[1] [0] The cause of the isolation signals is unknown. Performance of the RCIC System isola-
 [1] [1] tion channel functional and operability test, PT-02.1.9P, d reveal any instru-
 [1] [2] mentation operability problems. The applicable LCO was canceled and the RCIC System
 [1] [3] was returned to normal standby readiness. It is felt that the monthly performance
 [1] [4] of PT-02.1.9P will help detect any instrumentation failures.
