with Mr. Wilms. Mr. Wilms also offered some other suggestions which we believe will further enhance the technical quality of state inspection reports.

We hope that the Department's proposed regulatory plan will be formalized in the near future. Our comments are based on a formal strategic emergency plan which sets a clear responsibility, capabilities and commitments for each of the state departments to a state's overall radiation control program.

We have urged the Department to take the time to review the plan and to discuss them personally to them. We are confident that the Department is already current with the Commission's Regulations. In fact, many of the Department's Regulations will probably be revised before the end of this fiscal year.

If you have any questions concerning the review meeting or our comments, please let me know.

Sincerely,

Edward R. Price

Edward R. Price, Director  
Division of State and  
Insurance Relations
