A routine, announced safety inspection of your facility was conducted on December 12-14, 1990 by Mr. Thomas Dragoun of this office of activities authorized by NRC License No. R-70. Discussions of our findings were held by Mr. Dragoun with Dr. Wuttig and other members of your staff at the conclusion of this inspection.

Areas examined during this inspection included organization and staffing, audits and management oversight, reactor operator requalification program, surveillances, calibrations, and routine health physics surveys.

Within the scope of this review no violations or deviations were identified. The reactor operations program is fundamentally sound with excellent documentation and recordkeeping.
