SUBJECT: James A. FitzPatrick Nuclear Power Plant
Docket No. 50-333
**Proposed Changes to the Technical Specifications
Regarding the Deletion of Table 3.7-1
Primary Containment Isolation Valves (JPTS-89-027)**

- REFERENCES:
1. NYPA letter, J.C. Brons to D.R. Muller, dated December 19, 1986 (JPN-86-60), regarding Deletion of Table 3.7-1, "Process Piping Penetrating Primary Containment."
 2. NYPA letter, J.C. Brons to NRC, dated May 31, 1989 (JPN-89-035), regarding Deletion of Table 3.7-1, "Process Piping Penetrating Primary Containment."

Dear Sir:

This application for an amendment proposes to delete Table 3.7-1 (entitled, "Primary Containment Isolation Valves" on pages 198 through 209) along with any associated notes and any references to this table from the James A. FitzPatrick Technical Specifications. References to a similar table in the updated FitzPatrick Final Safety Analysis Report (FSAR) will replace the deleted table. This application is similar to license amendments the NRC has approved for Crystal River 3 and Davis-Besse.

A table of containment isolation valves was added to the FSAR as part of the July 1986 FSAR update.

This application amendment supersedes the two prior applications (References 1 and 2) where the Authority applied for similar changes.

Enclosed for filing is the signed original of a document entitled "Application for Amendment to Operating License," with Attachments I and II thereto, comprising a statement of the proposed changes to the Technical Specifications and the associated Safety Evaluation.

In accordance with 10 CFR 50.91, a copy of this application and the associated attachments are being provided to the designated New York State official.
