*File Solid Waste*

Subject Hittman Testing Program

Location TMI-II-R-2531

Trailer #24

Date April 15, 1980

To Arshad Nawaz

From C. A. Negin *CAN*

At an April 11, 1980 meeting GPU told NRC that duplicate samples of solidification test specimens would be provided to Brookhaven for leaching testing to characterize them. We will only provide samples that we consider "successful." NRC requests two of each sample we provide. To avoid excessive casting, the following action is recommended:

- 1) When resins are mixed and depleted, keep sufficient amounts of each batch to replicate successful samples
- 2) After we have reduced the bonds of acceptability, cast a sufficient number of samples to cover the range of mixes and depletions we successfully test

Please instruct Hittman to include this in their planning, and provide us an estimate of additional cost, including shipment to Brookhaven. The address is:

Dr. Donald Schweitzer  
Brookhaven National Lab, Building 830  
Upton, N. Y. 11973

We will also have to provide characteristic information for each sample.

If the cost is low of merely casting two additional samples of each unique sample we cast, then perhaps this is easier. It's your decision.

The NRC contact is Tim Johnson, (301) 427-4433. Tim will also initiate a letter through NRC to allow Brookhaven Personnel to observe the chemistry testing and sample preparation.
