SUMMARY OF SIGNIFICANT CHANGES
FIRE PROTECTION PLAN REVISION 7

1. Updated Fire Protection Staff duties and responsibilities as a result of the addition of the Senior Fire Protection Engineer position.
2. Changed the responsibility for control of the Fire Hazards Analysis document from Nuclear Engineering to the Senior Nuclear Fire Protection Engineer to enhance control and consistency.
3. Incorporated a description of the Fire Protection QA Program (FPQAP) into the Fire Protection Plan. The FPQAP was previously included in the Fire Protection Plan by reference only.
4. Deleted the titles of "Fire Chief" and "Assistant Fire Chief" from the Fire Protection Plan. The duties and responsibilities assigned these titles have been incorporated into the existing fire team leader and fire protection staff functions to assure consistency of control during fire emergencies and to provide technical support to the fire team leader as needed.
