Mr. Donald A. Nussbaumer, Chief
Source and Special Nuclear Materials Branch
Division of Licensing and Regulation
U. S. Atomic Energy Commission
Washington 25, D. C.

Dear Mr. Nussbaumer:

This is to supplement our letter of January 29, 1964
concerning termination of SNM-154 (Docket No. 70-146).

We have now received the results of activity counts on
smear samples taken at various points throughout the
building. The highest alpha activity was 271 d/m/
100 cm² and the highest beta activity was 874 d/m/
100 cm². In all cases the gamma activity was found to
be not significantly different from background.

Very truly yours,

NA Greenlee

N. A. Greenlee
