

JAN 15 1991

Docket No. 50-213

Connecticut Yankee Atomic Power Company  
ATTN: Mr. E. J. Mroczka  
Senior Vice President - Nuclear  
Engineering and Operations Group  
Post Office Box 270  
Hartford, Connecticut 06141

Gentlemen:

This is to confirm our plans to escort three representatives of GOSPROMATOMNADZOR USSR on a visit to your site on February 4-8, 1991, which were discussed with Mr. Stetz and me on January 11, 1991.

GOSPROMATOMNADZOR (GPAN) is the USSR equivalent of the U.S. Nuclear Regulatory Commission (NRC). The three GPAN representatives will be in the United States (U.S.) as guests of the NRC during the approximate period of January 8 - February 11, 1991, and will be hosted by the NRC Region I Office for portions of time between January 17 - February 9, 1991. Their visit to the United States is the second part of an inspector-exchange program (the first was conducted during the summer of 1989), which is included in the Protocol of the third meeting of the Joint Coordinating Committee on Civilian Nuclear Reactor Safety (JCCNRS) signed by the NRC and GPAN in Moscow during October 1990.

The names and titles of our Soviet guests are:

Anatoly I. Demjanenko, Head of the Southwest Regional Office of GPAN (in Kiev, Ukraine)

Victor P. Koltunov, Head of the GPAN Site Inspection Office at the six-unit Zaporozhye Nuclear Power Plant (located on the Dneiper River in southern Ukraine)

Andrey Y. Gluchov, region-based inspector in the Southwest Regional Office of GPAN (in Kiev)

The Soviet guests will be accompanied by an interpreter supplied by the U.S. State Department and will be escorted by myself as an NRC representative from the Region I office.

Connecticut Yankee Atomic Power Co. 2

Consistent with the intent of the US-USSR exchange program, the purposes of the Soviet group's visit are to allow it to gain a better knowledge and understanding of NRC activities at U.S. reactor facilities and to gain an appreciation for how the U.S. industry manages several key issues.

Consequently, the group is interested in observing and discussing the NRC reactor inspection program with our resident staff. Further, it is interested in observing and discussing the Electrical Distribution System Functional Team Inspection.

Additionally, the group is interested in discussing with your staff the following issues:

- The general layout of the electrical grid supplied by Haddam Neck and the general considerations that go into decisions on how the unit is to be employed (e.g., outage scheduling, load-following considerations, buying/selling of electrical power with other utilities).
- Financial planning for the facility including budgeting and interaction with rate-setting organizations.
- Considerations that go into decisions on plant staff size and organization, and decisions on budget size and priorities.
- Affects of NRC requirements and inspections on your activities and decision-making processes, including those affects associated with the NRC Systematic Assessment of Licensee Performance (SALP) program.
- Roles played by industry organizations (e.g., INPO, NUMARC, Westinghouse Owners Group, Region I Utilities Group) and their affect on your activities.
- Relationships with local governments and populations, particularly as they apply to the emergency preparedness process.
- Your perspective on the particular challenges you face in attempting to operate a nuclear power plant safely and efficiently in today's U.S. society and economy.

I will be in contact with you separately to coordinate a detailed schedule for the Soviet tour.
