SUMMARY AND ACTION REQUIRED (IF ANY)				
NRC Participants: Chris Allen				
<p>The NRC explained that the information needed to address question 5.3 in the staff's second request for additional information (ML19301A144) was the height of the container in which the thorium content would be transported. Since the applicant had not provided this information, the staff informed the applicant that either Drawing 1C-7975 needed to be revised to identify the minimum lid height which would prevent the thorium content from escaping from the container, or the staff could impose a condition in the certificate of compliance which would specify a minimum lid height for the container. The applicant chose to condition the certificate of compliance.</p>
