Docket Nos. 50-266
and 50-301

Mr. C. W. Fay
Assistant Vice President
Wisconsin Electric Power Company
231 West Michigan Street
Milwaukee, Wisconsin 53201

Dear Mr. Fay:

On June 27, 1978 we sent you a letter containing our evaluation that your previous submittals had provided an acceptable basis for continued operation of the Point Beach Nuclear Plant while long-term efforts continued toward developing an Emergency Core Cooling System (ECCS) analysis which specifically treats upper plenum injection. We are aware that long-term development of an ECCS model has been proceeding in a satisfactory manner with the Westinghouse Electric Corporation, supplier of fuel for the Point Beach Nuclear Plant. We request that you submit the ECCS model which specifically treats upper plenum injection on your docket for our review. Included with the model should be a set of sample calculations encompassing spectrum of large-break LOCAs. We request that you provide this information by December 15, 1982.

When our review of the generic model is complete, we may request plant specific calculations to verify the model's applicability to your facilities.

The reporting and/or recordkeeping requirements of this letter affect fewer than ten respondents; therefore, OMB Clearance is not required under P. L. 96-511.

Sincerely,

[Signature]
