MEMORANDUM FOR: D. Haverkamp, Lead Operations Inspector
FROM: H. Kister, Chief, TMI Resident Office
SUBJECT: TMI UNIT ONE RESTART PROGRAM

*Ray She
very
dated*

Due to the complexity of the Unit One restart program there is a need to develop, implement, and document a formal inspection plan to include all the identified licensee activities contemplated for restart. The plan should be developed to include all the inspections we should conduct to assure ourselves that the licensee is complying with all his commitments, NRC orders, and applicable regulations.

In this regard, you should begin scoping all the restart activities and from this, develop a proposal for conducting inspections within each area.

It is presently anticipated that any additional inspection manpower will be provided by the Region I office. However, based on the outcome of your proposed inspection plan, we should be sensitive to the need for assignment of additional personnel to the permanent staff.

You are requested to have the inspection plan developed, including your proposed manpower requirements, by November 21, 1979.
