Mr. L. L. Kintner  
U. S. Nuclear Regulatory Commission  
Office of Nuclear Reactor Regulation  
Division of Licensing  
Washington, D. C. 20555

Dear Mr. Kintner:

Reference: Enrico Fermi Atomic Power Plant, Unit 2  
NRC Docket No. 50-341

Subject: Reactor Pressure Vessel  
Water Level Sensing Lines

In response to the September 21, 1982 letter from B. J. Youngblood on the above subject, Detroit Edison is pleased to provide the following information.

As you know, the NRC Staff (Division of Systems Integration, NRR) has requested information on this subject from the BWR Owners Group (BWROG) as the basis for a generic review.

The Detroit Edison Company is a member of the BWROG and is a sponsor of the work that has been undertaken on this subject. On August 13, 1982, the BWROG by letter (BWROG-8253) from T. J. Dente to H. R. Denton, transmitted a report titled, "Review of BWR Reactor Vessel Water Level Measurement Systems", SLI-8211, prepared for the BWROG by S. Levy, Inc. It is our understanding that this report is still under review by the NRR Staff and that followup items, if any, have not yet been developed for NTOL plants. We will continue to follow this review aspect and will respond to the outcome of the generic review.

Sincerely,

Harry Tauber  
Group Vice President
