2
3 JUDGE COTTER: The hearing will come to order.
4 Docket No. 03030870-OM, in the matter of Fewell Geotechnical
5 Engineering, Limited. The action was precipitated by an
6 order issued by the Deputy Executive Director for Nuclear
7 Materials Safety Safeguards and Operations Support on
8 November 2, 1990, which provided that Fewell Geotechnical
9 Engineering, Limited shall not utilize Mr. Thomas E. Murray
10 in any licensed activities, including, but not limited to
11 activities performed radiographers, radiographers'
12 assistants and helpers for a period of three years.

13 By letter dated November 18, 1990, Mr. Murray
14 requested a hearing and that is why we are here today. I am
15 B. Paul Cotter, Jr. I'm the Chairman of this panel. To my
16 right is Judge Peter Lam. Judge Lam is a nuclear engineer.
17 To my left is Judge Richard Foster. Judge Foster is a
18 fisheries expert or environmental scientist.

19 I guess with that preliminary statement, let me
20 ask the parties to enter their appearance. Mr. Bachmann?

21 MR. BACHMANN: Yes, sir. My name is Richard G.
22 Bachmann. I am counsel for the staff of the Nuclear
23 Regulatory Commission. Also present beside me and whom I
24 intend to call later on as a witness is Mr. James Lieberman,
25 who is the Director of the Office of Enforcement of the NRC.

1 JUDGE COTTER: Thank you, Mr. Bachmann. Mr.
2 Murray, would you identify yourself for the record and give
3 your address, please?

4 MR. MURRAY: Thomas Edward Murray. My address is
5 802 Prospect Street, Apartment 601, Honolulu, Hawaii.

6 JUDGE COTTER: Thank you. Do you wish to make an
7 opening statement, Mr. Bachmann?

8 MR. BACHMANN: Yes, sir, we do. I wish to inform
9 the Board that I had a conversation with Mr. Murray on the
10 telephone last night wherein no promises were made,
11 recognizing that I'm an attorney, he is not, he is
12 representing himself. We made certain suggestions going
13 along with perhaps an inclination of the Board that perhaps
14 we could settle the case.

15 Subsequent to that fairly lengthy discussion in
16 which I explained to Mr. Murray all of his rights, similar
17 to what Your Honor has explained to him this morning, I
18 consulted my client, which is basically the staff and, more
19 succinctly, the Office of Enforcement. The decision was
20 made that we would proceed with the hearing as it was
21 originally set up.

22 It is my client's belief that at this stage, there
23 is no real room for a settlement. I informed Mr. Murray
24 that I would talk to my client about what we had spoken
25 about the previous evening, but that I could not promise

1 anything. I think Mr. Murray will verify that.

2 Therefore, going on to my opening statement, the -

3 -

4 JUDGE COTTER: What was the purpose of that? Is
5 there any point in any further conversations at this point?

6 MR. BACHMANN: Yes, there is. The reason why no
7 settlement was necessary is the belief of the staff that the
8 actions or shall we say, in this case, the admissions of Mr.
9 Murray, based on those admissions which led to the
10 violations of either the regulations or the operating
11 procedures of Fewell Corporation, amply support the sanction
12 that was imposed.

13 While a hearing may become somewhat lengthy and
14 somewhat tedious, it is the staff's position that, in this
15 case, it is necessary to go forward, explain not only what
16 Mr. Murray did, but also to explain why we consider it
17 significant enough to justify the three-year suspension from
18 the Fewell Operating License.

19 The reason I had brought up the earlier settlement
20 terms was, first, of course, to keep the Board informed that
21 I had talked to Mr. Murray, since he is not represented by
22 counsel. Second was to emphasize the point that the staff's
23 position is very strongly that the sanction imposed is as
24 stated in the order.

25 Do you wish me to proceed or do you wish Mr.

1 Murray to make a statement at this point?

2 JUDGE COTTER: I'm going to give him the option
3 before you proceed. Does that conclude your opening
4 statement?

5 MR. BACHMANN: That concludes my opening
6 statement, sir.

7 JUDGE COTTER: Do you wish to make an opening
8 statement, Mr. Murray?

9 MR. MURRAY: Yes, sir. I'm primarily here to, as
10 you gentlemen know from our conversation over the phone a
11 few weeks ago, that I'm trying to get it reduced, that I
12 think that the punishment is too strict, and that a lot of
13 the things they bring up they're saying I did willfully, and
14 I don't believe I did anything willfully.

15 I think there was some carelessness in the way I
16 performed radiography, but I also don't believe I
17 compromised the public safety. These are things I'm going
18 to clear up. There's a lot of things that we'll bring up
19 that I'm not going to refute; for instance, the stipulation.

20 So if we want to attack these things first, I
21 think it will save everyone a lot of time. I have the
22 letter and the stipulation is right here, Mr. Bachmann.

23 MR. BACHMANN: Responding to that stipulation,
24 until it was executed, it obviously had no legal
25 significance. I have sent a letter, a cover letter with a

1 stipulation to Mr. Murray wherein he would agree to the
2 operative facts of the five statements that are in the
3 order.

4 I indicated in the letter he would not be, by so
5 signing, admitting a violation or anything else, other than
6 on the days in question, he did or failed to do the things
7 that were listed in the order. I believe, if Mr. Murray
8 wishes to stipulate thereto, we could move right on to
9 another segment of our presentation.

10 Let me lay a better foundation.

11 JUDGE COTTER: I'm a little leery of that, since
12 Mr. Murray doesn't have counsel.

13 MR. BACHMANN: Let me lay a little better --

14 JUDGE COTTER: I find some considerable
15 ambivalence in the record that I've seen so far in the
16 discovery materials.

17 MR. BACHMANN: I will be off the record while I'm
18 approaching the Bench to hand out to the Board copies of the
19 order itself.

20 JUDGE COTTER: We'll stay on the record while you
21 walk, Mr. Bachmann.

22 [Pause.]

23 JUDGE COTTER: I'm sorry. I thought you were
24 giving me something related to a stipulation.

25 MR. BACHMANN: Yes, sir. It is related to it. I

1 will explain it moment. On Page 2 of the order, starting
2 at the bottom, there is a number one in parentheses, which
3 then goes on to Page 3 through number five on Page 3. What
4 Mr. Murray and I discussed about stipulating is to the facts
5 contained after those numbers that are in parentheses.

6 JUDGE COTTER: This is language identical to that
7 in the Federal Register Notice.

8 MR. BACHMANN: Yes, sir, it is. In fact, just to
9 make the record complete, the Federal Register Notice
10 citation is 55 Federal Register 47409, dated November 13,
11 1990. I used the original order because I believed that the
12 Federal Register's print is a little bit small to keep
13 referring to.

14 As I said, what I have discussed with Mr. Murray
15 is --

16 JUDGE COTTER: Let me, just for the record. If
17 it's not clear, what Mr. Bachmann has just given to the
18 Board -- did you give a copy to Mr. Murray?

19 MR. BACHMANN: Yes, I did.

20 JUDGE COTTER: Is a copy of the November 2, 1990
21 order modifying license effective immediately that I
22 referred to at the outset of this proceeding. It consists
23 of the cover sheet dated November 2, 1990, a second cover
24 sheet which is addressed -- the first cover sheet is a
25 letter to Fewell Geotechnical Engineering, Limited. The

1 second page is a copy of a similar letter to Mr. Murray.

2 The balance of the item is the order itself, which
3 numbers eight pages, including the distribution list on the
4 last page. The order itself is seven pages.

5 Go ahead, Mr. Bachmann.

6 MR. BACHMANN: Judge Cotter, at this point, having
7 given the citation and having had the description of the
8 document put into the record, I would move that this
9 document be received into evidence as Staff Exhibit No. 1
10 and bound into the record for the convenience of anyone who
11 may be reading the transcript.

12 JUDGE COTTER: Is there any objection to that, Mr.
13 Murray?

14 MR. MURRAY: No, sir.

15 JUDGE COTTER: It will be so received and bound.
16 [Staff Exhibit No. 1 was marked
17 for identification and received
18 into evidence.]

19 JUDGE COTTER: Is this preliminary to a
20 continuation of the subjects of stipulation or are you going
21 into your case?

22 MR. BACHMANN: No, sir. This was preliminary to
23 the stipulation, because I wish to point out to the Board
24 just specifically what it is that Mr. Murray would be
25 agreeing to, no more and no less. That is the facts as

1 stated on the items one through five on Pages 2 and 3 of the
2 order that has been entered into evidence.

3 I believe that it would be appropriate at this
4 point, if the Board wishes, to ask Mr. Murray if he fully
5 understands what he would be agreeing to.

6 JUDGE COTTER: Do you understand what you're
7 agreeing to here, Mr. Murray?

8 MR. MURRAY: On the stipulations?

9 MR. BACHMANN: Right. Just those five items.

10 JUDGE COTTER: You have a choice here, Mr. Murray.
11 You can either stipulate that these are the facts or you can
12 require them to put on evidence to prove it.

13 MR. MURRAY: No, I don't think that's necessary.
14 What I would like to explain, I would like to address each
15 one of these stipulations.

16 JUDGE COTTER: You can do that after --

17 MR. MURRAY: After.

18 JUDGE COTTER: -- he finishes putting on his case.

19 MR. MURRAY: While they're presenting their
20 evidence. I think that's the best way to go, then, because
21 I just don't want to go through here and leave it sit just
22 like this.

23 JUDGE COTTER: I understand that.

24 MR. MURRAY: I need to explain my actions on this
25 particular day.

1 JUDGE COTTER: What you're saying is that these
2 were the actions that you took.

3 MR. MURRAY: Yes. Basically, yes.

4 JUDGE COTTER: When you say basically, does that
5 mean that this is an inaccurate description or is some other
6 part of it that's missing?

7 MR. MURRAY: Well, I'll give you a for instance
8 here. There are some things -- okay. Now, failed to
9 prevent entry in the restricted area of individuals other
10 than radiographers and radiographic assistants. This ties
11 into how I establish boundaries and restricted areas, and
12 the fact that I --

13 JUDGE COTTER: Let's start at the top, Mr. Murray.
14 Let's take the first one. It says that you conducted
15 radiographic operations without performing surveys to
16 establish the radiation boundary on October 25, 1990. Is
17 that correct?

18 MR. MURRAY: That's correct.

19 JUDGE COTTER: Item 2 says on October 23 and 25,
20 1990, Mr. Murray failed to rope off any portion of the
21 radiation boundary and failed to post signs for most of that
22 boundary. Is that correct?

23 MR. MURRAY: That's correct.

24 JUDGE COTTER: Item 3, on October 23, 1990, on at
25 least 12 occasions, and on October 25, 1990, on at least

1 five occasions, Mr. Murray failed to perform surveys of the
2 exposure device to determine that the sealed source had been
3 returned to its shielded position after radiographic
4 exposures. Is that correct?

5 MR. MURRAY: No. I don't know that. This is when
6 --

7 JUDGE COTTER: That means that you do not wish to
8 stipulate to Item 3, that that is a fact.

9 MR. MURRAY: Correct. To go back to No. 1 --
10 okay. That will come later. Go ahead.

11 JUDGE COTTER: I'm sure there are a lot of
12 explanations and additional information.

13 MR. MURRAY: Sure. Okay, sir.

14 JUDGE COTTER: That's not what we're talking about
15 here. We're talking about whether these events took place.

16 MR. MURRAY: I see. All right.

17 JUDGE COTTER: So far, if I understand you
18 correctly, you are willing to stipulate to Items 1 and 2,
19 but not Item 3.

20 MR. MURRAY: Let's put it this way. Item 3, on 12
21 occasions, I can't say that I exactly did -- if I didn't do
22 it one time, and I'm sure there was one time I didn't do,
23 then --

24 JUDGE COTTER: You don't know whether the number
25 12 is right or whether the number five is right.

1 MR. MURRAY: Exactly. But I can say that I've
2 seen the videotape and I did not survey a number of times.

3 JUDGE COTTER: Then you do not stipulate to Item
4 3.

5 MR. MURRAY: Okay.

6 MR. BACHMANN: Do I understand correctly that the
7 lack of agreement is the numbers, the specific numbers and
8 nothing else?

9 JUDGE COTTER: Mr. Murray?

10 MR. MURRAY: They're saying that on October 23,
11 1990, on at least 12 occasions. I don't know if there was
12 any occasions on the 23rd of October that I did not survey
13 the exposure device. Number two, I -- well. There were two
14 different situations on those two particular days, and I'm
15 referring to my survey meter when I bring this up, and it
16 did make a difference in the way I performed radiography,
17 not having this particular survey meter as opposed to an
18 older survey meter.

19 JUDGE COTTER: Right.

20 MR. BACHMANN: I understand there is no agreement
21 on Item 3.

22 JUDGE COTTER: Item 4, on October 25, 1990, Mr.
23 Murray failed to secure the radiographic source in the
24 fully-shielded position after each of several source
25 exposures. Is that the case?

1 MR. MURRAY: That is the case.

2 JUDGE COTTER: Then you agree to stipulate to Item
3 4?

4 MR. MURRAY: Yes.

5 JUDGE COTTER: Item 5, on October 23, 1990, Mr.
6 Murray failed to prevent entry into the restricted area of
7 individuals other than radiographers and radiographers'
8 assistants.

9 MR. MURRAY: This is one that I'll have to not
10 stipulate, that I'll have to go over with the NRC people.

11 JUDGE COTTER: All right. As it stands, you agree
12 to stipulate to Items 1, 2 and 4.

13 MR. MURRAY: Yes.

14 JUDGE COTTER: All right.

15 MR. BACHMANN: Your Honor, the next item I wish to
16 bring to the Board's attention is the Fewell Geotechnical
17 Engineering, Limited materials license. As with the order,
18 this has been previously supplied to the Board by me and it
19 comes with certain attachments, which include the amendment
20 to the license which put Mr. Murray on it, on the license as
21 a named individual.

22 It includes the pertinent operating procedures
23 which are Roman Numerals I and IV, which are cited in the
24 November 2 order.

25 JUDGE COTTER: Wait a minute. You said the

1 license includes what?

2 MR. BACHMANN: The operating procedures, Roman
3 Numerals I and IV, which are cited in the November 2 order
4 modifying the license, as being violated. In other words, I
5 am providing the Board, again, with the exact same documents
6 that I mailed to the Board and to Mr. Murray previously.

7 JUDGE COTTER: Let's do them separately. Why
8 don't you do the license first? I take it what you're doing
9 is offering that as an exhibit.

10 MR. BACHMANN: Yes, I am, sir. The reason I put
11 it together is because on the last page of the license,
12 there is item No. 15. It then references three documents,
13 which would be the documents that would be -- which,
14 together with this license, comprises the entire license.

15 Mr. Murray, here is a copy of the document we're
16 talking about. I think it would be easier for the Board if
17 I had their particular --

18 [Pause.]

19 MR. BACHMANN: I'd like the Reporter to mark this
20 as Staff Exhibit No. 2 for identification at this time.
21 This would be both documents; the three-page license and the
22 attachments.

23 [Staff Exhibit No. 2 was
24 marked for identification.]

25 JUDGE COTTER: Do you want to identify the

1 attachments in a little bit more detail, Mr. Bachmann?

2 MR. BACHMANN: Yes, sir. The attachments, if you
3 will look, as I said, at Page 3 of the license, there is
4 Item 15. The license states that "Except as specifically
5 provided otherwise in this license, the licensee shall
6 conduct its program in accordance with the statements,
7 representations, and procedures contained in the documents,
8 including any enclosures listed below."

9 "The Nuclear Regulatory Commission" --

10 JUDGE COTTER: You don't have to read all that.

11 MR. BACHMANN: All right, sir. The documents
12 listed below are, A, NRC Form 313, dated October 24, 1988;
13 two letters, one dated January 13, 1989 and a letter dated
14 September 12, 1989. What the attachment consists of is that
15 form, the January 13, 1989 letter, and the September 12,
16 1989 letter.

17 JUDGE COTTER: The January 13, 1989 letter, for
18 the record, is two pages?

19 MR. BACHMANN: No. It's a number of pages, sir.

20 JUDGE COTTER: How many pages is it?

21 MR. MURRAY: It basically was a resubmittal of
22 items, as you can see on the face of the letter dated
23 January 13, 1989, a resubmittal of certain items that were
24 originally attached to the Form 313, which is the first
25 page. I do not represent that this letter -- the

1 attachments are all of the attachments.

2 What I have submitted are the same attachments
3 that I have previously mailed to the Board and Mr. Murray,
4 the pertinent parts of the operating procedures. There are
5 a number of parts of the operating procedures which were not
6 cited as being in violation and, therefore, have not been
7 attached to your -- to keep the record a little bit more
8 clean.

9 However, Section I and Section IV are attached to
10 the January 13, 1989 letter and those are the ones that were
11 cited in the staff's November 2, 1990 order.

12 JUDGE COTTER: The January 13, 1989 letter, then,
13 is a little confusing since you're excerpting a document.
14 What I have before me is your NRC Form 313, dated October
15 24, 1988 and signed by Richard B. Fewell, President, one
16 page. I then have a one-page January 13, 1989 letter,
17 followed by seven pages of attachments, which I understand
18 were not all of the attachments which were included in the
19 January 13, 1989 letter, is that correct?

20 MR. BACHMANN: That is correct, Your Honor. This
21 is the complete --

22 JUDGE COTTER: Let me finish describing it.

23 MR. BACHMANN: Sorry.

24 JUDGE COTTER: Then I have a September 12, 1989
25 letter from Fewell -- excuse me. Let me elaborate. The

1 January 13, 1989 letter is from Fewell to the United States
2 Nuclear Regulatory Commission, and signed by Mr. Fewell.
3 The September 12, 1989 letter is also from Fewell to the
4 United States Nuclear Regulatory Commission, also Region V,
5 and the attachment to it is three pages, in this case,
6 describing Mr. Murray's prior educational and radiographic
7 experience.

8 MR. BACHMANN: Your Honor, to the best of my
9 knowledge, the attachments to the September 12, 1989 letter
10 are complete as they stand. I did not excerpt it. The
11 prior letter was about two inches thick and I believed that
12 it would probably unnecessarily clutter the record. The
13 September 12, 1989 letter is --

14 JUDGE COTTER: Maybe you'd better describe each
15 page of the attachments to the January 13 letter.

16 MR. BACHMANN: All right. The January 13, 1989
17 letter was a resubmittal of information originally contained
18 with the NRC Form 313. It supplements and supports the
19 Fewell application for its license. The first page after
20 the cover letter states the types of equipment and the
21 radiation activity of each piece of equipment that Fewell
22 will have under its NRC license.

23 JUDGE COTTER: That's the page that's captioned
24 "NRC License Application, Item 5."

25 MR. BACHMANN: That is correct, sir.

1 JUDGE COTTER: All right. The next attachment.

2 MR. BACHMANN: The next page is basic information
3 on the --

4 JUDGE COTTER: Why don't you start with the
5 caption, sir?

6 MR. BACHMANN: All right. This page is headed, at
7 the top, "Source Changes," which gives the model number of
8 the equipment used to change the sources.

9 JUDGE COTTER: Changers.

10 MR. BACHMANN: Changers. Yes, sir. Used to
11 change the sources. That's followed then by item 6 and Item
12 7, which describes how the license material will be used.
13 It names Gary Martin as the Radiation Safety Officer and
14 gives some of his background, which is continued on the
15 following page which is headed "Construction Engineering
16 Consultants," Loflandtown, Pennsylvania. This is a
17 continuation of the description of Mr. Martin's experience.

18 Item 8 indicates that the training will be
19 conducted by Mr. Martin.

20 JUDGE COTTER: I think it's sufficient to identify
21 that that next page has headers which read Item 8, Item 9,
22 Item 10 and Item 11.

23 MR. BACHMANN: Thank you, sir. The next page is
24 taken out of the operating procedures. This is labelled
25 Section I, General Safety Rules. There are six paragraphs,

1 beginning with 1.0 and going to 6.0.

2 The next page after that is Section IV. It's
3 entitled "Radiographic Operations." It has paragraphs
4 starting with 1.0, with subparagraphs, going through
5 Paragraph 2.9.

6 JUDGE COTTER: That's two pages.

7 MR. BACHMANN: That is two pages. Yes, sir. The
8 second page begins with Paragraph 2.6.

9 JUDGE COTTER: Very good.

10 MR. BACHMANN: The next item is the September 12,
11 1989 letter from Fewell to the NRC. This consists of one
12 cover letter and three enclosed pages. This letter was sent
13 to the NRC to amend the Fewell license to add Mr. Murray, by
14 name, as a radiographer.

15 The enclosed three pages; the first one is titled
16 "Thomas E. Murray." It gives his address and provides his
17 radiographic experience, starting in June of 1978,
18 proceeding on to the next page and ending in February 1989
19 on the second page.

20 The last page is a note or memo from H.G. Juan
21 Lopez, who has signed it as an NDT, non-destructive testing
22 examiner, and the subject is radiographic assistant
23 qualifications of T.E. Murray.

24 JUDGE COTTER: Very good. I realize that's
25 tedious, but if someone were to have to look at this a year

1 from now, they'd know exactly what we were looking at.

2 Do you have a question?

3 JUDGE FOSTER: Yes. The January 13 letter from
4 Mr. Fewell would appear to be a tender of this information
5 to the NRC. Is there something that goes along with this
6 package that says it was accepted by the NRC as a part of
7 the license?

8 MR. BACHMANN: Yes, sir. If you will look at the
9 license, which is the three-page document, on the third page
10 --

11 JUDGE COTTER: That's the Item 15 reference on the
12 license, the license itself.

13 JUDGE FOSTER: So it was accepted.

14 MR. BACHMANN: Yes, it was and it's incorporated
15 by reference into the license. Having gone through that,
16 Your Honor, I would request or move the Board that the
17 document which I have described as Staff Exhibit No. 2 for
18 identification be accepted into evidence as Staff Exhibit
19 No. 2.

20 JUDGE COTTER: I think to dot a procedural I, Mr.
21 Bachmann, what you want to do is get Mr. Murray to stipulate
22 to that.

23 MR. BACHMANN: That would certainly be easier.
24 Mr. Murray, do you have any objection to entering the
25 documents that I just described into evidence?

1 MR. MURRAY: No, not at all.

2 MR. BACHMANN: There being no objection, Your
3 Honor, I move that it be accepted into evidence.

4 JUDGE COTTER: It will be admitted.

5 [Staff Exhibit No. 2 was
6 received into evidence.]

7 MR. BACHMANN: Considering the somewhat complexity
8 of the detail here, I would also ask that this be bound into
9 the transcript for future reference, more easily than
10 attempting to retain the documents themselves. These are
11 the only exhibits that I intend to ask be bound into the
12 record.

13 JUDGE COTTER: That's fine. Ms. Bryson, would you
14 make a note of that? Thank you.

15 MR. MURRAY: Your Honor, would you have any
16 objections of me having Phil Manly up here with myself?
17 He's not my legal representative.

18 JUDGE COTTER: No. That's fine, if there's no
19 objection.

20 MR. BACHMANN: The staff has no objection.

21 [Pause.]

22 JUDGE COTTER: Let's go off the record for a
23 minute.

24 [Discussion off the record.]

25 JUDGE COTTER: Back on the record. Call your

1 witness.

2 MR. BACHMANN: Your Honor, the staff, the initial
3 two staff witnesses which will be testifying as a panel are
4 Mr. David Skov, S-k-o-v, and Mr. Philip Joukoff, J-o-u-k-o-
5 f-f. Mr. Skov is an inspector for the NRC. Mr. Joukoff is
6 an investigator for the NRC.

7 JUDGE COTTER: Never having met either gentleman,
8 who is who?

9 MR. BACHMANN: Mr. Joukoff is the one on the left.
10 Mr. Skov is the one on the right.

11 JUDGE COTTER: Gentlemen, would you stand please
12 and raise your right hand?

13 Whereupon,

14 DAVID SKOV,
15 a witness, was called for examination by counsel on behalf
16 of the Nuclear Regulatory Commission, and, having been first
17 duly sworn, was examined and testified as follows:

18 Whereupon,

19 PHILIP JOUKOFF,
20 a witness, was called for examination by counsel on behalf
21 of the Nuclear Regulatory Commission, and, having been first
22 duly sworn, was examined and testified as follows:

23 JUDGE COTTER: Please be seated.

24 MR. BACHMANN: Your Honor, I will now approach the
25 Bench and provide the Board and the Reporter with the

1 professional qualifications of my two witnesses.

2 [Documents proffered.]

3 MR. BACHMANN: Your Honor, I have provided the
4 Board and Mr. Murray with documents entitled, in
5 alphabetical order, Professional Qualifications of Philip
6 Victor Joukoff and, the second document, Professional
7 Qualifications of David D. Skov.

8 JUDGE COTTER: Are you going to mark these for the
9 record?

10 MR. BACHMANN: Yes. I'd like them to be marked in
11 alphabetical order as Staff Exhibits 3 and 4 for
12 identification.

13 [Staff Exhibit Nos. 3 and 4
14 were marked for identification.]

15 JUDGE COTTER: Mr. Joukoff's professional
16 qualifications would be Exhibit 3?

17 MR. BACHMANN: That is correct. Mr. Skov's would
18 be Exhibit 4. At this point, I would like to ask Mr.
19 Joukoff, because he comes ahead in alphabetical order, and
20 then Mr. Skov, but first Mr. Joukoff if the information
21 contained in his professional qualifications is true and
22 correct to the best of his knowledge and belief?

23 WITNESS JOUKOFF: Yes, it is.

24 MR. BACHMANN: Are there any modifications or
25 changes that you wish to make or any typographical errors

1 that we may have not caught?

2 WITNESS JOUKOFF: No. On a very fast review, it
3 appears to be accurate.

4 MR. BACHMANN: Mr. Skov, I will ask you the same
5 question. Are the professional qualifications, Staff
6 Exhibit 4 for identification, true and correct to the best
7 of your knowledge and belief?

8 WITNESS SKOV: From a brief review of this, it
9 appears that they are.

10 MR. BACHMANN: I'd like to ask Mr. Murray if he
11 has any objection to admitting these professional
12 qualifications into evidence?

13 MR. MURRAY: No. Not at all, sir.

14 MR. BACHMANN: I, therefore, move, absent any
15 objection, Staff Exhibits 3 and 4 to be admitted into
16 evidence.

17 JUDGE COTTER: They will be admitted.

18 [Staff Exhibit Nos. 3 and 4
19 were received into evidence.]

20 MR. BACHMANN: At this point, I would like to
21 proceed with my direct examination of the witnesses. Since
22 we have one microphone and the witnesses will be testifying
23 together, there may be a slight delay as we move the sound
24 system around. I beg the Board's indulgence on that matter.

25 I will also address these questions basically in

1 alphabetical order, because it would be just simpler to
2 understand. Therefore, Mr. Joukoff, the question we address
3 to you, and then Mr. Skov, in that order.

4 DIRECT EXAMINATION

5 BY MR. BACHMANN:

6 Q On Page 2 of the staff's November 2, 1990 order,
7 towards the bottom of the page; in fact, the last full
8 paragraph prior to the (1), it states "An NRC investigator
9 and an NRC inspector observed Mr. Murray conduct
10 radiographic operations on October 23 and 25, 1990 at Candle
11 Industrial Park, Oahu, Hawaii." I will just stop at that
12 point.

13 Mr. Joukoff, Mr. Skov, were you that investigator
14 and were you that inspector?

15 A [Witness Joukoff.] Yes, I was.

16 A [Witness Skov.] Yes, I was.

17 Q Is it true that you observed Mr. Murray on the two
18 dates stated in the order?

19 A [Witness Joukoff.] Yes, I did.

20 A [Witness Skov.] That's correct.

21 Q Prior to your testimony in this hearing, and you
22 have been in the Courtroom and have listened to Mr. Murray,
23 you understand that of the five items on Pages 2 and 3 of
24 the staff's November 2, 1990 order, that Mr. Murray
25 disputes, to whatever extent, Items 3 and 5. You are aware

1 of that, is that correct?

2 A [Witness Joukoff.] Yes, I am.

3 A [Witness Skov.] That's correct.

4 Q I want to proceed to Item 3. Item 3 states on
5 October 23, 1990, on at least 12 occasions, and October 25,
6 1990, on at least five occasions, Mr. Murray failed to
7 perform surveys of the exposure device to determine if the
8 sealed source had been returned to its shielded position
9 after radiographic exposures.

10 Did you gentlemen witness these omissions as
11 stated in the order?

12 A [Witness Joukoff.] I was present both times on
13 October 23 and the 25th, and I did observe Mr. Murray fail
14 to conduct the surveys of the camera after returning the
15 sealed source to the shielded position.

16 A [Witness Skov.] I also was present on October 23
17 and October 25, 1990. I observed Mr. Murray failing to
18 perform the surveys of the exposure device to determine that
19 the source had been returned to its shielded position.

20 JUDGE COTTER: Speak up, please. We can't hear
21 you. Do you want to start again?

22 WITNESS SKOV: On October 23, 1990 and also on
23 October 25, 1990, I also observed Mr. Murray failing to
24 perform radiation surveys of the exposure device to verify
25 that the sealed source had been returned to its shielded

1 position after each radiographic exposure.

2 BY MR. BACHMANN:

3 Q The statement of facts in the order mentions 12
4 occasions on October 23 and five occasions -- let me go
5 back. It mentions at least 12 occasions on October 23 and
6 at least five occasions on October 25. Is this accurate
7 according to your recollection as to what you observed on
8 those days, the number of occasions on which Mr. Murray
9 failed to perform surveys of the exposure device, etcetera,
10 as stated in the order?

11 JUDGE COTTER: The record will be clearer if you'd
12 address your questions seriatim and identify who you're
13 addressing them to.

14 MR. BACHMANN: All right.

15 BY MR. BACHMANN:

16 Q Mr. Joukoff and then Mr. Skov, did you understand
17 the question I asked you? The question was we are faced
18 with a statement of on at least 12 occasions on the 23rd and
19 on at least five occasions on the 25th. Is it your
20 testimony that those numbers are accurate; that on the 23rd,
21 on at least 12 occasions, and on the 25th, on at least five
22 occasions, Mr. Murray failed to perform the surveys as
23 stated?

24 JUDGE COTTER: Who are you addressing your
25 question to?

1 BY MR. BACHMANN:

2 Q In order from Mr. Joukoff and then Mr. Skov.

3 A [Witness Joukoff.] On October 23, 1990, while we
4 were observing Mr. Murray, Mr. Skov watched him the entire
5 time that we were present. I did not watch him the entire
6 time that we were present because I had to reload the
7 camera. And Mr. Skov, being the inspector whose specialty
8 is materials licensees, he watched him during the entire
9 time we were there through binoculars. So I'd have to defer
10 that question to Mr. Skov.

11 On the 25th of October of 1990, I personally
12 operated a video camera that was videoing Mr. Murray and I
13 can testify to the fact that it was on at least five
14 occasions he failed to do the survey of the camera after the
15 sealed source had been returned to the shielded position.

16 Q Mr. Skov, would you address October 23, please?

17 A [Witness Skov.] Yes. On October 23, I was
18 watching Mr. Murray with binoculars during the radiographic
19 operations that he was performing. It was my estimate that
20 he had failed to perform these required surveys on the 12
21 occasions, at least 12 occasions, that he was performing
22 those operations.

23 Also, on October 25, I was watching Mr. Murray
24 with binoculars and on five occasions he also had failed to
25 perform the radiation surveys of the exposure device.

1 Q On your answer just previous to the last answer or
2 the last statement, you used the phrase "you estimated at
3 least 12 occasions."

4 A [Witness Skov.] Yes.

5 Q Could you state categorically it was at least 12
6 occasions?

7 A [Witness Skov.] My estimate of that number is
8 that it was possibly more than 12, but I felt it was at
9 least 12 occasions.

10 Q Thank you. Returning to the November 2 NRC staff
11 order, Item 5 states that on October 23, 1990, Mr. Murray
12 failed to prevent entry into a restricted area of
13 individuals other than radiographers and radiographers'
14 assistants. You gentlemen have testified already that you
15 were present and observing Mr. Murray on October 23, 1990.
16 Did you observe him failing to prevent entry as stated in
17 the order?

18 A [Witness Joukoff.] Yes, I did. I observed Mr.
19 Murray while he failed to prevent individuals other than
20 radiographers or radiographers' assistants from entering
21 into the restricted area during source exposures.

22 Q Mr. Joukoff, before you pass the microphone, on
23 what do you base your statement that these were individuals
24 other than radiographers and radiographers' assistants?

25 A [Witness Joukoff.] Being specific, I was watching

1 Mr. Murray on that date through the lens of a 35mm camera
2 with a telephoto lens on the camera. I observed a number of
3 individuals who were workmen working on a pipeline project
4 in Campbell Industrial Park. In my professional opinion,
5 these individuals were workmen from their dress attire. And
6 I also observed two employees of another testing laboratory
7 in Hawaii and I observed them to be inside the area, also.

8 I also, previous to going out to do this
9 investigation, reviewed the Fewell license and I understood
10 that the only individuals on the Fewell license were Mr.
11 Murray and Mr. Gary Martin, the Radiation Safety Officer.
12 So I identified those two individuals. Consequently, any
13 other individuals inside the restricted area would have to
14 qualify as being non-radiographic personnel.

15 Q Mr. Skov, do you wish to add to Mr. Joukoff's
16 statements regarding the 23rd and the unauthorized entry?

17 A [Witness Skov.] Let me also add that the only
18 individual who was observed operating the camera was Mr.
19 Murray. Since there were no other individuals listed on the
20 license, as Mr. Joukoff has stated, I concluded that all of
21 the other personnel present on the site were not directly
22 associated with the radiographic operations as either
23 radiographers or assistant radiographers.

24 Q I'll go back to Mr. Joukoff again. There appears
25 to be a dispute as to what would have constituted the

1 restricted area. I believe Mr. Murray, and, of course, he
2 can correct me if I'm wrong, indicated that as to where the
3 particular boundary would be or not be might have been in
4 dispute.

5 Why is it your belief that these individuals
6 entered the restricted area?

7 A [Witness Joukoff.] It is my belief that these
8 individuals entered the restricted area for a number of
9 different reasons. On one side of the trench where Mr.
10 Murray was conducting radiography, Mr. Murray posted signs
11 that delineated what was, in his opinion, the restricted
12 area. As a radiographer, he formed the restricted area by
13 placing these signs.

14 Consequently, if an individual were to cross the
15 signs and come inside that area, then I would assume that
16 they are inside the restricted area. On the other side of
17 the trench where Mr. Murray was conducting radiography, Mr.
18 Murray failed to post any signs delineating the restricted
19 area.

20 From my observations and my professional
21 experience, I know that radiation would also go to that side
22 of the trench and although there was no posting there, that
23 there should have been posting and there was a restricted
24 area boundary, be it imaginary in this particular case
25 because it was not posted, and I also watched one individual

1 walk through that area.

2 That is why I feel that individuals entered into
3 the restricted area.

4 Q Do you have anything to add, Mr. Skov?

5 A [Witness Skov.] I don't believe so. I believe
6 that Mr. Joukoff has stated correctly why the area that was
7 posted constituted the boundary of the restricted area,
8 which is in accordance with the operating procedures of the
9 license or referenced by the license.

10 MR. BACHMANN: Your Honor, at this time, the staff
11 has for the Court, at its option, a re . . . entation of a unit
12 similar to that used by Mr. Murray. It's our belief that it
13 might make the descriptions, the additional evidence a
14 little bit more understandable, but it is strictly at the
15 Board's option. I do not consider this particular
16 demonstration as having evidentiary value, but merely to
17 allow the Board to see what is happening.

18 We also have a further constraint that, from the
19 placement of the microphones the explanation, we will
20 probably not be able to make a very coherent on-the-record
21 description. We could go off the record for it or we could
22 stay on the record and do our best. The staff does not want
23 to use this for evidentiary value, merely so that the Board
24 can better understand how these cameras work, at the Board's
25 option at this point.

1 JUDGE COTTER: I'm tempted to ask you whether
2 you're offering your irrelevant incoherent evidence, but I
3 won't do that. Let's go off the record here for a minute.

4 [Discussion off the record.]

5 JUDGE COTTER: On the record. We'll proceed. We
6 think that this would be useful for illustrative purposes to
7 give the Board some sense of how this kind of device
8 operates, and certainly not for the purpose of giving any
9 evidence as to what specifically Mr. Murray may or may not
10 have done with the device that he used at the time that he
11 was be observed on October 23 and October 25.

12 MR. BACHMANN: That's correct, sir.

13 JUDGE COTTER: Do you have any objection to that,
14 Mr. Murray?

15 MR. MURRAY: No, I don't, sir.

16 MR. BACHMANN: We can either remain on the record
17 or go off the record. There is a question out from Judge
18 Cocter to Mr. Skov on the similarities and differences
19 between this and Mr. Murray's device.

20 BY MR. BACHMANN:

21 Q Could you answer that now, please?

22 A [Witness Skov.] Yes, Your Honor. The device that
23 we have here for demonstration purposes is a mockup Model
24 660 Tech Ops Camera, which is the same model device and
25 manufacturer that was used by Mr. Murray during the

1 radiographic operations on October 23 and October 25, 1990.

2 JUDGE COTTER: It's called a Tech Ops Camera?

3 WITNESS SKOV: That's correct.

4 JUDGE COTTER: Tech as in T-e-c-h and Ops as in O-
5 p-s?

6 WITNESS SKOV: That's correct, Your Honor.

7 JUDGE COTTER: You might give the Reporter a hand
8 in this case when we get into jargon. Is this device used
9 for training purposes?

10 WITNESS SKOV: Yes, it is, Your Honor.

11 MR. BACHMANN: At this point, I'm going to ask Mr.
12 Skov to proceed over to counsel table so that the Board will
13 have a better view of the camera, and then he can explain
14 its workings at that time.

15 JUDGE COTTER: You might just pull that mike loose
16 and carry it, speak into it.

17 WITNESS SKOV: I'm going to need my hands free.

18 JUDGE COTTER: Then Mr. Bachmann gets to hold the
19 mike under your chin.

20 MR. BACHMANN: I will attempt to get the mike to
21 where Mr. Skov can speak into it while he's explaining the
22 use of the camera.

23 WITNESS SKOV: Your Honor, this Tech Ops Model 660
24 exposure device mockup is used for training purposes and
25 we'll illustrate how the device itself operates. What I'd

1 like to do first is to just generally identify the various
2 parts, the major parts of the camera and the connectors and
3 the tubing attached to it.

4 First of all, we have the exposure device itself
5 and attached to it is a representation, this is just a
6 plastic tube that represents the source guide tube. It has
7 a stop at the end of the source guide tube to essentially
8 stop the source from moving beyond or outside of the tube.

9 JUDGE COTTER: What normally is that tube made of?
10 Is it normally plastic?

11 WITNESS SKOV: No. It's made out of flexible
12 stainless steel material.

13 JUDGE COTTER: Thank you.

14 WITNESS SKOV: At the other end of the camera is
15 what is known as a control cable or a drive cable. It is
16 coupled to a lock mechanism of the exposure device. At the
17 other end of the control cable is a crank mechanism. The
18 particular type of crank mechanism that Mr. Murray used on
19 October 23 and October 25, 1990 was a reel type crank
20 mechanism.

21 This particular type of crank mechanism is
22 referred to as a pistol grip type of crank. The major
23 difference with a reel type is that it allows the ability to
24 reel in or to more easily wrap the control cable around this
25 control mechanism as opposed to with the pistol grip type of

1 mechanism, you just have to carry the cables loose.

2 JUDGE COTTER: I'm not sure I understood that.

3 WITNESS JOUKOFF: Your Honor, the pistol grip,
4 when you disconnect this mechanism from the camera, it
5 leaves the cords dangling and consequently, typically, the
6 cords are longer than this, also, so that the radiographer
7 can get further from the device.

8 In the reel type, it's very similar to a hose reel
9 like on a residential hose, where you have a crank typically
10 on most people's residences. If you have a reel, you can
11 take the control cables and wrap them around the reel,
12 making a compact unit that's easier to move in the field
13 rather than dragging your cables through the dirt.

14 WITNESS SKOV: Your Honor, this is a picture of
15 the reel control crank assembly.

16 JUDGE FOSTER: I have a question. When you're
17 operating the crank, how does that move the source?

18 WITNESS SKOV: Your Honor, the way that it would
19 move the source would be -- first of all, let me just back
20 up here by explaining that the lock mechanism prevents the
21 source, which, in this particular case, is connected to a
22 pigtail assembly

23 JUDGE COTTER: Pigtail?

24 WITNESS SKOV: Yes. That's another term that's
25 used, it's jargon used in the industry for a sealed source

1 assembly. Basically, you have a source capsule, which is
2 attached to a cable, which, in turn, would be attached to
3 this control or drive cable.

4 I've already attached all these parts to show you
5 how it's set up in the field. However, before the
6 radiographer actually starts making radiographs or starts
7 radiographic operations, he would need to assemble both the
8 source guide tube and the drive cable to the camera. He
9 would need to make those couplings.

10 The block mechanism here has to be rotated to the
11 operate position from the lock position on the selector ring
12 in order to allow the cable which is driven this crank
13 mechanism to be pushed out of the exposure device, and I can
14 demonstrate how that's accomplished.

15 Normally, this control cable would be something on
16 the order of 20 to 25 feet long. So that would allow the
17 radiographer to be positioned at a relatively safe distance
18 away from the exposure device.

19 JUDGE LAM: So the locking mechanism prevents the
20 control cable from moving the source.

21 WITNESS SKOV: That's correct, provided that the
22 selector ring has been turned to the lock position.

23 JUDGE COTTER: Presumably it can't be turned to
24 the lock position if the cable has been pushed through there
25 and pushed the source out into the guide tube

1 WITNESS SKOV: That's correct. There are three
2 positions on this selector ring. One is connect, and it has
3 to be turned to the connect position in order to make this
4 coupling between the drive cable and the camera. That is
5 between the drive cable and the pigtail source assembly.

6 Then once that coupling is made, this is rotated
7 to the lock position in preparation for radiography. The
8 radiographer would make sure that the end of the source
9 guide tube would be positioned at the radiographic focus;
10 that is, the position where he wants to make the radiograph.

11 There is one piece of equipment is missing from
12 this demonstration. That is that there is no collimator
13 that's positioned on this source guide tube, whereas in the
14 case where Mr. Murray was operating on October 23 and 25,
15 there was a collimator.

16 JUDGE LAM: Are there indications anywhere
17 indicating where the source is, because the source could be
18 anywhere within that shielded box or anywhere in the guide
19 tube?

20 WITNESS SKOV: That's correct, Your Honor. Once
21 this source is in -- I'll go ahead and demonstrate it right
22 now by turning this to the operate position. Perhaps you
23 can see that this is -- the drive cable is now moving the
24 source assembly out. You can possibly see it exiting into
25 the source guide tube until it reaches the end.

1 JUDGE LAM: My question is is there an indication,
2 do you have an indicator, a precision indicator, mechanical
3 or electrical telling you where the source is?

4 WITNESS SKOV: Yes, there is, Your Honor. There
5 is an odometer on the control assembly, which would indicate
6 in feet where the source is located. However, this is not a
7 foolproof mechanism because odometers can slip. They can be
8 reset. Therefore, they may not be accurate.

9 If a radiographer, at the end of the exposure,
10 cranks the source back in and does not crank it in all the
11 way or if even if he believes that it has been cranked in
12 all the way and it has not been, it is impossible for him to
13 actually rotate this to the lock position, the selector ring
14 to the lock position.

15 So that would be another way that he would be able
16 to determine that the source, which is now here, has not
17 been fully retracted to the fully shielded position. But
18 the only sure way that the radiographer can determine that
19 the source is in the fully shielded position is to perform a
20 radiation survey with a survey instrument.

21 That is the primary method that all radiographers
22 need to use to establish that there is no radiation hazard
23 associated with the end of the operation, since the source
24 can now be fully retracted to the fully shielded position.

25 In the exposure device here, we have a cutout

1 which shows a shield which, in this particular case,
2 represents a depleted uranium shield. So the depleted
3 uranium shield --

4 JUDGE COTTER: Are you referring to the black
5 curve?

6 WITNESS SKOV: Yes. It's the dark color in here
7 surrounding the tube.

8 JUDGE COTTER: Right.

9 WITNESS SKOV: The purpose of the depleted uranium
10 is to provide an effective way for shielding the radiation
11 from exceeding dangerous radiation levels and to ensure that
12 there's not going to be a hazard once the source has been
13 retracted to the fully shielded position.

14 Now, when it has been retracted to the fully
15 shielded position, only then can this source selector ring
16 be rotated to the lock position. So at that point, it is
17 impossible to actually move the source assembly.

18 So one of the very important steps that a
19 radiographer needs to make after each radiographic exposure
20 is as he walks up to the camera with the radiation survey
21 instrument, he needs also to be able to reach down and turn
22 the selector ring to the lock position. What that does is
23 ensure -- and also to depress this -- it's not doing it now.

24 He would need to rotate this to the lock position
25 and that would prevent the source from accidentally being

1 moved out of the camera into a non-shielded configuration.
2 So that is basically a brief description of how the
3 radiographic exposure device operates. There are two key
4 safety components associated with the radiographic
5 operation. One is to lock the source in the secure
6 position.

7 That prevents the source from accidentally being
8 moved out of the camera, which could happen, for example, if
9 the crank were accidentally hit. This has happened in
10 certain cases, incidents where there have been exposures,
11 over-exposures. The second, of course, is to use a
12 radiation survey instrument to survey around the
13 radiographic exposure device and the source guide tube.

14 JUDGE FOSTER: Why are there two tubes, control
15 tubes going to the camera from the reel?

16 WITNESS SKOV: Your Honor, one tube, this one --
17 you're referring to, I believe, the second tube here.

18 JUDGE FOSTER: Yes.

19 WITNESS SKOV: That would be the take-up cable,
20 because you have to have some cabling available to -- once
21 you rotate or crank back the source, that excess cable has
22 to go somewhere.

23 JUDGE FOSTER: All right.

24 WITNESS SKOV: So there is cabling in both tubes.

25 JUDGE FOSTER: One of them is just a chamber.

1 WITNESS SKOV: Correct. The second cable is
2 emptied once you crank out the source. Once you crank it
3 back in, then it occupies both spaces, both tubes.

4 JUDGE LAM: You are saying there are basically
5 three levels of safeguards in terms of telling where the
6 source is; one, the control cable odometer; two, the locking
7 mechanism would only be in the lock position if the source
8 is fully retracted; and, third is the radiation survey.

9 WITNESS SKOV: That's correct. The odometer,
10 however, is not what I would consider to be part, a primary
11 part of the safe operation. That is it can be used as a
12 supplementary means of indicating where the source was
13 located. However, it's not foolproof and should not be
14 relied on.

15 JUDGE LAM: Then how reliable is the locking
16 mechanism, by which I mean if the source is not fully
17 retracted, can you still lock it?

18 WITNESS SKOV: No, you cannot, not with this
19 particular camera. You cannot.

20 JUDGE LAM: So that is a reliable safeguard.

21 WITNESS SKOV: That's correct, Your Honor. But I
22 should also point out that that is the way the lock device
23 is designed. Of course, there have been certain incidents
24 regarding different various parts of cameras which have
25 become defective, as lock mechanisms can, for one reason or

1 another, malfunction. So again, you're left with the
2 radiation survey as the really only primary reliable method
3 of determining the location of the source.

4 JUDGE COTTER: How close to the source device --
5 in the case of verifying that it's fully retracted to the
6 shielded position by using the locking mechanism, you're
7 right on top of the machine. With the survey devices, how
8 close do you get to the machine, the source?

9 WITNESS SKOV: Before you would be able to detect
10 that you have an exposed source?

11 JUDGE COTTER: Yes.

12 WITNESS SKOV: The way that would be accomplished
13 would be with the survey meter in hand as the radiographer
14 approaches the exposure device.

15 JUDGE COTTER: Right. So how many feet does he --

16 WITNESS SKOV: As he continues to approach the
17 exposure device, if the radiation survey meter indicator
18 keeps going up, changes scales in an upward fashion, that
19 would indicate that there is a radiation hazard, that there
20 possibly maybe an exposed source.

21 JUDGE COTTER: Assuming he was 25 feet away when
22 he finished cranking and he then starts approaching with the
23 meter. How many feet is he before he gets a pretty good
24 idea that it's not fully retracted?

25 WITNESS SKOV: Yes. If he's using a survey meter,

1 he should be able to determine that at 25 feet.

2 JUDGE COTTER: So in terms of the radiographer's
3 safety, the survey meter is the most effective.

4 WITNESS SKOV: That's correct, Your Honor.

5 JUDGE COTTER: Is there anything further on this?

6 WITNESS SKOV: I don't have anything to add, Your
7 Honor, unless you have additional questions.

8 JUDGE COTTER: Is this an appropriate point to
9 take a break?

10 MR. BACHMANN: Yes, sir. Upon return, the staff
11 will move to introduce the video tape.

12 JUDGE COTTER: All right. We'll take a ten-
13 minute break.

14 [Brief recess.]

15 JUDGE COTTER: The hearing will come to order.
16 Proceed, Mr. Bachmann.

17 MR. BACHMANN: Your Honor, I would like to draw
18 the attention of the witnesses to the November 2, 1990
19 order. The first page of the order itself, and specifically
20 the paragraph that is titled Roman Numeral II.

21 BY MR. BACHMANN:

22 Q Gentlemen, do you have that in front of you?

23 A [Witness Joukoff.] Yes, I do.

24 A [Witness Skov.] Yes, I do.

25 Q In that paragraph, certain sections of Fewell's

1 operating and emergency procedures are referenced. They are
2 referred to as OEP, as indicated on the second line of Roman
3 Numeral II. At the time you observed Mr. Murray, did you
4 have some familiarity with the operating procedures at
5 Fewell? First Mr. Joukoff.

6 A [Witness Joukoff.] As an NRC investigator, I
7 would only have a general knowledge of those. My staff and
8 investigation defers these specific types of areas to agency
9 experts, like Mr. Skov. So my knowledge is only general.
10 Mr. Skov has specific knowledge.

11 Q Is that correct, Mr. Skov?

12 A [Witness Skov.] Yes. I have specific knowledge
13 of the operating and emergency procedures as contained in
14 the Fewell license and have reviewed those before conducting
15 the inspection on October 23 and 25, 1990.

16 Q I would refer you -- do you have a copy of
17 Sections I and IV of those procedures in front of you?

18 MR. BACHMANN: These procedures, as earlier
19 indicated, Your Honor, are contained in Staff Exhibit 2.

20 WITNESS SKOV: Yes, I do.

21 BY MR. BACHMANN:

22 Q Mr. Skov, I refer you to Section IV under
23 Radiographic Operations, Paragraph 2.0, Job Site Operations,
24 Subparagraph 2.5, do you see Paragraph 2.5?

25 A [Witness Skov.] Yes, I do.

1 Q Do you see where that is cited in the order under
2 Roman Numeral II?

3 A [Witness Skov.] Yes, I do.

4 Q Would you read the first sentence of Subparagraph
5 2.5 of the operating procedures, please?

6 A [Witness Skov.] It says, "Expose the source and
7 conduct a survey of the radiation boundary."

8 Q Mr. Skov, in your experience with radiography, how
9 would you interpret that sentence? What sort of
10 requirement, in your opinion, what does that require?

11 A [Witness Skov.] That would require a radiographer
12 to, after the radiation source had been exposed initially,
13 after the entire operation had been set up, at the beginning
14 of site operations, that a confirmatory radiation survey
15 with a survey instrument would need to be used in order to -
16 - and I say confirmatory because it would be needed to
17 confirm the location of the calculated boundary, radiation
18 boundary, so as to exclude public access into the restricted
19 area.

20 Q Mr. Skov, would you ever consider it acceptable to
21 base that boundary on calculations, past experiences, or
22 anything else other than an actual survey with a survey
23 meter?

24 A [Witness Skov.] No, I would not. In every case,
25 a confirmatory radiation survey with a survey instrument

1 would need to be conducted in order to verify that the
2 radiation level at the boundary of the restricted area was
3 correct.

4 JUDGE COTTER: Excuse me a minute, Mr. Bachmann.
5 When you say survey, Mr. Skov, do you mean actually
6 physically walking -- assume a square -- physically walking
7 the four sides of the square with a survey instrument in
8 your hand?

9 WITNESS SKOV: Yes, Your Honor, that is
10 essentially correct. It would not necessarily need to be a
11 square, but it would be -- the radiographer would need to
12 conduct an instrument survey basically at the perimeter,
13 wherever radiation levels from the source could be expected
14 to occur.

15 JUDGE COTTER: Would that mean that you could
16 satisfy that requirement by taking it at given points on the
17 perimeter?

18 WITNESS SKOV: That is correct. However, that
19 would depend upon the actual configuration, the specific
20 configuration of the setup, because in many radiographic
21 operations there are going to exist obstacles or other areas
22 where radiation levels can be expected to vary as a result
23 of any shielding that may be provided or as a result of any
24 radiation scatter that may reach a particular point along
25 the perimeter.

1 JUDGE COTTER: So that's a judgmental exercise on
2 the part of the radiographer.

3 WITNESS SKOV: It's not necessarily a judgmental
4 exercise because the radiographer would need to confirm what
5 the radiation level actually was --

6 JUDGE COTTER: What I meant by judgmental was to
7 what points he would go to take a reading.

8 WITNESS SKOV: Yes, that's correct.

9 JUDGE COTTER: Excuse me, Mr. Bachmann. Thank
10 you.

11 BY MR. BACHMANN:

12 Q Mr. Skov, is there any situation that you can
13 imagine, and I'm asking this as a hypothetical question,
14 where --

15 JUDGE COTTER: I take it we're assuming that these
16 witnesses are qualified as expert witnesses, is that what
17 you're doing?

18 MR. BACHMANN: Yes, sir. Their professional
19 qualifications have been put into the record as evidence.
20 Rather than have them recite their background, I introduced
21 their professional qualifications as documents. Is there
22 any question in the Board's mind as to whether they're
23 qualified or not to testify?

24 JUDGE COTTER: You didn't specifically qualify
25 them as experts. I thought that was just sort of general

1 information.

2 MR. BACHMANN: Then I stand corrected and quite
3 embarrassed. Mr. Skov is a qualified witness, as attested
4 to in his professional qualifications, which, if you would
5 like to refer back to Staff Exhibit 4 in evidence, indicates
6 a very extensive background in the field of radiation.

7 JUDGE COTTER: I guess I'm not clear of the
8 boundaries that you're putting on his expertise, if any.

9 MR. BACHMANN: As far as his ability to testify as
10 to the procedures, the proper procedures used in
11 radiography, I see no boundaries as to what he would know.
12 If there is any doubt as to his qualifications or ability to
13 testify, I would certainly be happy to perform a voir dire
14 or entertain any questions from the Board as to Mr. Skov's
15 qualifications for his testimony.

16 JUDGE COTTER: So you're offering him as an expert
17 on radiographic procedures.

18 MR. BACHMANN: That is correct, and effects of
19 radiation, if that comes up.

20 JUDGE COTTER: What kind of effects?

21 MR. BACHMANN: Such as what it would take, for
22 instance, and I'm just using this as a general example, to
23 cause an overexposure; not just simply the procedures of
24 radiography, but the reasons for doing these things and why
25 certain procedures would prevent, for instance,

1 overexposures, to that extent.

2 JUDGE COTTER: Do you have any objection to Mr.
3 Skov testifying as an expert on radiographic procedures, Mr.
4 Murray?

5 MR. MURRAY: No, not at all. This is strictly
6 radiographic procedures and NRC rules and regulations,
7 correct?

8 MR. BACHMANN: That's correct.

9 MR. MURRAY: No, not at all.

10 JUDGE COTTER: Then he will be so treated. But I
11 do not think the record reflects anything other than we got
12 his resume.

13 MR. BACHMANN: Then I stand corrected. In my zeal
14 to move along the procedure, I perhaps --

15 JUDGE COTTER: That's deeply appreciated, Mr.
16 Bachmann.

17 MR. MURRAY: Let me add something, also. The
18 survey points and things like this, if it pertains strictly
19 to saying what is in the 10 CFR, yes; but, for instance,
20 when he says that it's necessary to take -- go run and do a
21 full perimeter in order to get -- no. I don't think he can
22 actually say that that is a requirement and that that should
23 be done.

24 JUDGE COTTER: You can cross examine him on that.

25 MR. BACHMANN: I also might indicate that he not

1 only will have the advantage of cross examination of these
2 points, but, of course, Mr. Murray is free to put himself
3 under oath and testify to his own knowledge in rebuttal to
4 whatever is said here.

5 I'm not certain where we were as to the last
6 question.

7 WITNESS SKOV: Survey site, if I call, the
8 boundaries.

9 BY MR. BACHMANN:

10 Q Mr. Skov, based on your experience, and I'm going
11 to ask you a hypothetical question, would it be adequate for
12 a radiographer to return to the same site, let's say, a day
13 later and since he had established, let us assume, the
14 previous day, would it be all right for him not to perform
15 the survey since he's already done it the day before? Do
16 you understand my question?

17 A [Witness Skov.] Would you rephrase the question?

18 Q I was asking you a hypothetical question where a
19 radiographer would return to a site to perform radiography
20 let's say the day after he had already done some radiography
21 and had done the survey the previous day, had gone out to
22 the boundaries; therefore, he was using the same camera,
23 believed -- would it be, in your opinion and based on your
24 experience, acceptable for that radiographer to say, well, I
25 knew what the boundaries were yesterday because I did the

1 survey, I don't need to do the survey today? Would that be
2 acceptable?

3 A [Witness Skov.] No, it would not.

4 Q Could you explain to the Board why not?

5 A [Witness Skov.] First of all, it would not be
6 acceptable to do that because the -- first of all, it's not
7 allowed by the licensee's operating and emergency
8 procedures. Secondly, in all likelihood, the positioning of
9 the sources relative to the job site would be different on
10 the second day versus the first day.

11 The actual positions of the source used, in this
12 particular case, on October 23 or October 25 at the job
13 site, the positioning of the source relative to the pipes,
14 the positioning of the source relative to the ground, the
15 earth embankment and the trench, and the area surrounding
16 the job site would differ.

17 The only way that I can see where one could expect
18 the radiation levels to be exactly the same would be where
19 there have been no changes in the positioning of the source
20 or in the location of the job site.

21 Q You indicated earlier, I understood this was
22 originally a hypothetical question, but for Mr. Murray, in
23 particular, that the source was, indeed, moved, is that
24 correct, and, therefore, was not in the same position each
25 day?

1 A [Witness Skov.] That is correct.

2 WITNESS JOUKOFF: If it please the Court, Your
3 Honor, perhaps I could interject just a little bit here on
4 the physical description of the area where the radiography
5 was conducted and some of the factors involved there. The
6 pipes that Mr. Murray was radiographing were located in a
7 trench. Without being an expert in the area, I myself know
8 that depending upon which pipe Mr. Murray was working on,
9 there would be either no pipes between that pipe and the
10 public roadway or an accessible area or there would be some
11 pipes in the way.

12 Obviously, if we have some pipes in the way,
13 they're made out of steel and there is some shielding
14 capability involved. That is one factor that has to be
15 considered; where -- of the series of four pipes laying in a
16 trench, which one of the four was being radiographed with
17 varied radiation levels.

18 The other consideration that I think is important
19 to note here is that in order to radiograph a pipe weld on a
20 360-degree circumference that Mr. Murray has to make
21 multiple exposures in order to do this. Not just one
22 exposure will capture the weldment all the way around the
23 perimeter of the pipe.

24 So if we were to look at a cross-section of the
25 pipe and inscribe a clock face on that, it takes three

1 exposures typically to shoot the weldment all the way around
2 360 degrees. One exposure is typically made the 12:00
3 position, wherein the source is located on top of the pipe
4 and the radiation is directed down, basically into the
5 ground which is located underneath.

6 The other two exposures are made at the 4:00 and
7 8:00 positions on the clock. Consequently, the way these
8 pipes were configured, that would put the radiation envelope
9 either towards the public roadway at an up angle because
10 you're at the 4:00 position and not the 3:00 position. The
11 other exposure at the 8:00 would direct the radiation the
12 opposite direction.

13 So it's important to remember when we're talking
14 about surveys and radiation levels here that there are
15 numerous variables involved as far as making the surveys
16 each time that the work is done in the field.

17 JUDGE COTTER: How close was the October 23 work
18 to the October 25 work?

19 WITNESS JOUKOFF: My estimate is it was within 200
20 feet. We'd estimate 200 feet, Your Honor.

21 MR. BACHMANN: Your Honor, just to ensure the
22 record is correct, I have not put forward Mr. Joukoff as an
23 expert in radiography. So I would ask Mr. Skov at this
24 point to indicate his agreement or non-agreement with what
25 Mr. Joukoff stated insofar as the radiation fields are

1 concerned.

2 WITNESS SKOV: I would agree with the statements
3 that Mr. Joukoff has made. I would also add that the
4 October 23 and October 25 operations also differed in their
5 geography inasmuch as there was a piece of -- there was an
6 area that was at a different distance from the actual site
7 of the operations which was accessible to the public, and
8 that was the area -- the berm area that overlooked the site.

9 MR. MURRAY: Can I interrupt for one second?

10 JUDGE COTTER: You'll get a chance to ask him
11 questions after he's finished.

12 MR. MURRAY: I didn't want to ask him a question.
13 I wanted to go back to is he an expert in radiography or is
14 he an expert in NRC rules and regulations? I must have
15 misunderstood this. If you're saying he's an expert in
16 radiography, I don't accept it. If you're saying within the
17 NRC rules and regs. I accept it. I don't know if I
18 misunderstood that or didn't hear it correctly.

19 WITNESS SKOV: Perhaps I should --

20 MR. MURRAY: To me, there's a difference.

21 WITNESS SKOV: Perhaps I should interject here by
22 stating that I would not consider myself to be an expert in
23 radiography inasmuch as the art of radiography; that is the
24 interpretation of film, the actual ways in which radiography
25 is to be taken of welds; in that area.

1 My expertise would only be limited to areas
2 dealing with rules and regulations, NRC rules and
3 regulations, and health physics, safe practices, and in the
4 field of radiation in general.

5 JUDGE COTTER: With those qualifications, we'll
6 accept your testimony as an expert.

7 MR. BACHMANN: Your Honor, I, at this point, would
8 like to ask the Board to take official notice of two parts
9 of the NRC regulations. They are brief and I will read them
10 into the record. We are talking 10 CFR Section 34.43, which
11 is entitled "Radiation Surveys." It has alphabetically
12 listed sections. However, it begins with "The licensee
13 shall ensure that," and then -- the general topic of this, I
14 hasten to add, is precautionary procedures in radiographic
15 operations. Then we are down to radiation surveys, then we
16 are down to Section (b).

17 "The licensee shall ensure that a survey with a
18 calibrated and operational" --

19 JUDGE COTTER: I'm sorry. What's the section
20 number?

21 MR. BACHMANN: I'm sorry. It's 10 CFR 34.43(b).
22 And this is required. "The licensee shall ensure that a
23 survey with a calibrated and operable radiation survey
24 instrument is made after each exposure to determine that the
25 sealed source has been returned to its shielded position.

1 The entire circumference of the radiographic exposure device
2 must be surveyed. If the radiographic exposure device has a
3 source guide tube, the survey must include the guide tube."

4 I would ask the Board to take official notice of
5 that NRC regulation.

6 JUDGE COTTER: All right.

7 MR. BACHMANN: I also have a second regulation.
8 This is under Equipment Control. This entire section,
9 beginning with Part 34, applies to radiography. 10 CFR
10 Section 34.22(a) is entitled "Locking of Radiographic
11 Exposure Devices, Storage Containers and Source Changers."

12 (a) reads, and it's relatively brief, so I'll read
13 it into the record, "Each radiographic exposure device shall
14 have a lock or outer lock container designed to prevent
15 unauthorized or accidental removal of the sealed source from
16 its shielded position. The exposure device or its container
17 shall be kept locked when not under the direct surveillance
18 of a radiographer or radiographer's assistant or as
19 otherwise may be authorized in Section 34.41."

20 The operative sentence is "In addition, during
21 radiographic operations, the sealed source assembly shall be
22 secured in the shielded position each time the source
23 returned to that position."

24 Now, I am going to ask a couple of questions, but,
25 first, I would ask the Board to take official notice that

1 that is an NRC regulation.

2 JUDGE COTTER: Very well.

3 BY MR. BACHMANN:

4 Q Mr. Skov, the second section I read, and I'm
5 referring to 10 C.F.R. 34.22, what is your understanding where
6 it states "During the radiographic operations, the sealed
7 source assembly shall be secured in the shielded position
8 each time the source is returned to that position," what is
9 your understanding of that regulation?

10 A [Witness Skov.] My understanding of that
11 regulation is that on each and every exposure of the source;
12 that is on each and every time a radiographer or a
13 radiographer's assistant would crank out the source to the
14 exposed position outside of the camera, and that after the
15 source was returned to the exposure device, that the source
16 would be secured in the lock position.

17 Q And that is the lock position as you demonstrated
18 earlier to the Board as being the locked -- where it can
19 only be locked if the source is fully retracted, is that
20 correct?

21 A [Witness Skov.] That's correct. In this
22 particular case, that would require the radiographer or
23 radiographer's assistant to actually reach down and
24 physically rotate the selector ring from the operate
25 position to the lock position. In so doing, that would

1 prevent the source from accidentally moving out of the
2 shielded position. Therefore, it would be secured within
3 the camera, the camera's shielded position.

4 Q A few minutes ago I read into the record 10 CFR
5 34.43(b), which referred to making surveys after each
6 exposure. Is this requirement the same requirement that you
7 were referring to when you were responding to Judge Lam's
8 question as to the necessity of surveying earlier?

9 A [Witness Skov.] Yes, that is correct.

10 MR. BACHMANN: Your Honor, at this time, after
11 I've laid the proper foundation, I would like to present the
12 videotape which has been sent to all parties. I would also
13 like to have Mr. Skov and Mr. Joukoff do a bit of narration
14 as we proceed, since they were there. Let me lay the
15 foundation, though, first.

16 JUDGE COTTER: Can't you just stipulate there was
17 a tape taken on October 25 by these two gentlemen with Mr.
18 Murray? Is there any objection to the use of this tape, Mr.
19 Murray?

20 MR. MURRAY: No, not at all.

21 JUDGE COTTER: It is, in fact, a tape that was
22 made on October 25 by Mr. Joukoff and Mr. Skov --

23 MR. MURRAY: Yes.

24 JUDGE COTTER: -- from your work at the site.

25 MR. MURRAY: And what was the woman's name?

1 WITNESS JOUKOFF: One other Federal employee was
2 assisting us, Lynn Meara, Criminal Investigative Service.

3 MR. MURRAY: No. I have no objection.

4 JUDGE COTTER: I take it this is an exhibit, then?

5 MR. BACHMANN: Yes, sir. I would like to have it
6 marked Staff Exhibit 5 for identification.

7 [Staff Exhibit No. 5 was
8 marked for identification.]

9 MR. BACHMANN: I would note for the record that a
10 copy of this tape has been sent -- one copy to Judges Cotter
11 and Lam at East-West Towers in Bethesda, one copy to Judge
12 Foster in Oregon, and a copy was mailed to Mr. Murray at the
13 same time. I'm rather unfamiliar with the evidentiary rules
14 on videotapes, but we will try to proceed.

15 MR. BACHMANN: Mr. Joukoff, would you plug in the
16 tape? I would also like to ensure that the x-ray machine
17 didn't do something to the tape on the way out.

18 JUDGE COTTER: We'll go off the record for a
19 minute.

20 [Discussion off the record.]

21 JUDGE COTTER: On the record.

22 [Whereupon, a video presentation was made.]

23 MR. BACHMANN: I request that Mr. Joukoff or Mr.
24 Skov provide comments to the Board.

25 WITNESS SKOV: The time recorded on the tape here

1 is 2:17 p.m.

2 JUDGE COTTER: Just a minute. Can you stop it a
3 second?

4 REPORTER: Do you want this all on the record?

5 JUDGE COTTER: Yes.

6 MR. BACHMANN: I would ask that we don't need the
7 narration on the tape on the transcript and only --

8 JUDGE COTTER: Right. Just their comments.

9 MR. BACHMANN: -- only their comments.

10 [Video presentation resumed.]

11 WITNESS SKOV: This was shortly after arrival of
12 Mr. Murray at the job site.

13 [Video presentation continues.]

14 WITNESS SKOV: On the video, you can see at time
15 2:21:44, you can see on the black tool box is the Victoreen
16 survey meter.

17 [Video presentation continues.]

18 WITNESS SKOV: At this point in time, on the video
19 it says 2:23 p.m., you can see that Mr. Murray had taken the
20 Tech Ops Model 660 camera and placed it on the ground.

21 JUDGE COTTER: The what camera?

22 WITNESS SKOV: The Tech Ops Model 660 camera.

23 [Video presentation continues.]

24 WITNESS SKOV: At 2:23:51 p.m., Mr. Murray placed
25 a traffic cone on the ground and placed a radiation warning

1 sign on the cone.

2 JUDGE COTTER: That's all self-evident. What are
3 we adding here?

4 MR. BACHMANN: Nothing. Your Honor, I'm aware
5 that the Board has reviewed this. I know Mr. Murray has. I
6 wanted at the very least to ensure that the item that was
7 being placed into evidence contained a usable picture. The
8 staff would not require that we play this through to the end
9 unless the Board believes that it's necessary.

10 JUDGE COTTER: If all you're going to do is replay
11 the tape, no. We can look at the tape. Are you going to
12 add something to what we're seeing on the tape?

13 MR. BACHMANN: Excuse me just for a moment.

14 [Pause.]

15 MR. BACHMANN: We would waive any further showing
16 of the tape if we could put it into evidence without -- if
17 the Board allows us to put it into evidence without rolling
18 the entire tape.

19 JUDGE COTTER: If you can you make a
20 representation that this is identical to the tape that
21 you've sent us, I see no reason for us to go through it all
22 again.

23 MR. BACHMANN: Thank you, Your Honor. I do
24 represent to the Board that this is an identical copy of the
25 tape that was sent to the Board and Mr. Murray, that it

1 contains the events of October 25, 1990. It's been marked
2 as Staff Exhibit 5. At this point, if Mr. Murray has no
3 objection, I would move it into evidence as Staff Exhibit
4 No. 5.

5 JUDGE COTTER: Any objection, Mr. Murray?

6 MR. MURRAY: No, sir.

7 JUDGE COTTER: It will be received as Staff
8 Exhibit No. 5.

9 [Staff Exhibit No. 5 was
10 received into evidence.]

11 MR. BACHMANN: Your Honor, we are going to be
12 quicker than I anticipated because of not showing the entire
13 tape. We are at a natural break in the staff's case. We're
14 approximately three-quarters of the way through. I would
15 suggest we might consider an early lunch and then we can
16 wrap up our presentation inside of an hour.

17 JUDGE COTTER: Do you have any additional direct
18 testimony from these two gentlemen?

19 MR. BACHMANN: Yes. I have one more piece, but,
20 as I said, this would be a natural place to break or we can
21 go for another hour.

22 JUDGE COTTER: We'll go off the record for a
23 minute.

24 [Discussion off the record.]

25 JUDGE COTTER: Back on the record.

1 BY MR. BACHMANN:

2 Q Mr. Joukoff, Mr. Skov, I would like you to refer
3 to Page 3 of the staff's order. I refer you to the last
4 paragraph, wherein the order states "On October 25, 1990,
5 Mr. Murray was asked by NRC personnel whether, during the
6 NRC-observed operations of October 23 and 25, he had
7 complied with the above referenced NRC requirements for the
8 conduct of surveys to ensure that the source had been
9 retracted to its fully shielded position, with a securing of
10 the source in the shielded position after each exposure, and
11 for preventing the entry of unauthorized personnel into the
12 restricted area."

13 Then it goes on to say "He stated that he had
14 complied and also demonstrated to the NRC personnel the
15 survey procedures he stated that he had used on those
16 occasions; that is, conducting a survey with a survey meter
17 as he approached the radiographic exposure device and
18 circumferentially surveying the device with a survey meter."

19 Let me ask you, starting with Mr. Joukoff, in
20 turn, and then Mr. Skov. The NRC personnel referenced here,
21 are they you?

22 A [Witness Joukoff.] Yes. The NRC personnel
23 referenced here are Mr. Skov and I.

24 Q Now, it says here that on the 25th, Mr. Murray was
25 asked whether he had complied with the three requirements

1 that I just read to you on October 23 and 25. Did Mr.
2 Murray, on the 25th, tell you, Mr. Joukoff, and then I'll
3 ask Mr. Skov, that he had complied with those requirements
4 on those days?

5 A [Witness Joukoif.] Yes. On October the 25th,
6 1990, when I contacted Mr. Murray, Mr. Skov and I questioned
7 him about these three points and Mr. Murray told us that he
8 had complied with these requirements during the conduct of
9 radiographic operations.

10 Q Mr. Joukoff, is there any question in your mind
11 whether Mr. Murray, and I'm only asking for your opinion in
12 this case, but is there any question that you asked Mr.
13 Murray about what he did on those particular days and not
14 just in general?

15 A [Witness Joukoff.] Yes. My questioning --

16 JUDGE COTTER: If you're not asking him for his
17 opinion, you're asking for the fact.

18 MR. BACHMANN: Yes, sir. I got a little tangled
19 up in that one.

20 WITNESS JOUKOFF: Yes. When I questioned Mr.
21 Murray on October 25, 1990, as part of my questioning, I
22 asked him very directed questions that included the date
23 that I was referring to. In other words, I said on this
24 date, did you survey the camera after each exposure, and I
25 elicited an answer from Mr. Murray that, yes, he had, on

1 this date, surveyed the camera after each exposure.

2 The questioning continued also to the securing of
3 the camera after each exposure and when I asked him about
4 the entry of unauthorized personnel into the radiation area,
5 Mr. Murray told me that this never happened at any time. It
6 was an all-encompassing response.

7 BY MR. BACHMANN:

8 Q Mr. Skov, do you have anything to add to what Mr.
9 Joukoff has just stated?

10 A [Witness Skov.] I have nothing to add, other than
11 to verify that the responses that Murray made to the
12 questioning was as Mr. Joukoff has stated.

13 Q Referring back to the November 2 order and going
14 to Page 4, Section III. The second sentence, which begins
15 on the sixth line down, states "In addition, Mr. Murray gave
16 the NRC false information concerning his actions contrary to
17 the observation of two NRC employees."

18 Mr. Joukoff, Mr. Skov, are you the two NRC
19 employees referred to here?

20 A [Witness Joukoff.] Yes. Mr. Skov and I are the
21 two NRC employees referred to here.

22 Q The false information referred to here refers to
23 the statements that Mr. Murray made to you, Mr. Joukoff, on
24 October 25, 1990?

25 A [Witness Joukoff.] That is correct.

1 Q Backing up just a little bit here, there's one
2 more point I want to ensure we cover. On the order, at the
3 bottom of Page 3, the very last fragmentary sentence where
4 it starts out "He stated that he," and going on to Page 4,
5 "He stated that he had complied and also demonstrated to the
6 NRC personnel the survey procedures he stated that he had
7 used on those occasions," and the sentence goes on.

8 Again, Mr. Joukoff, the NRC personnel were you and
9 Mr. Skov, is that correct?

10 A [Witness Joukoff.] That is correct.

11 Q It says here that Mr. Murray demonstrated the
12 survey procedures that he had used on those occasions.
13 Would you explain what you mean by "he demonstrated?"

14 A [Witness Joukoff.] Yes. During the time that Mr.
15 Skov and I were with Mr. Murray on October 25, 1990, Mr.
16 Skov conducted an NRC inspection of Mr. Murray's field
17 radiographic activities. I assisted Mr. Skov in this
18 inspection and we also conversed with Mr. Murray about his
19 activities on October 25 and his activities in general when
20 conducting field radiography.

21 At one point during this inspection, Mr. Skov
22 asked that Mr. Murray expose the radiographic source in a
23 configuration on one of the pipes such that Mr. Skov could
24 take a radiation survey meter and Mr. Skov could make
25 radiation surveys of the restricted area boundary and other

1 radiation surveys in general to determine what the radiation
2 intensities were at different locations around the trench in
3 which Mr. Murray was conducting radiography.

4 Mr. Murray was asked to expose the source a number
5 of times. I did not count the exact number. It would be
6 approximately four or five times. I watched Mr. Murray
7 during these exposures and I noted that every time that he
8 retracted the source back into the camera, that he then
9 picked up his survey meter in his hand and approached the
10 camera with a survey meter in his hand while looking at the
11 survey meter to see if there was a radiation reading on it
12 and that he would then approach the camera, that he would
13 bend over with his hand, reach down, turn the locking
14 mechanism on the camera and then would utilize the survey
15 meter to conduct a survey of the camera and the source guide
16 tube.

17 Q Mr. Skov, do you agree with or have any comments
18 on what Mr. Joukoff has stated?

19 A [Witness Skov.] I agree with all the statements
20 that Mr. Joukoff has made. I don't have anything to add,
21 other than the fact that upon questioning, Mr. Murray also
22 demonstrated separately to us how he conducted a survey of
23 the camera and also how he did lock the camera after
24 conducting radiographic exposures.

25 Q Just so we are totally clear about the statements

1 you have just made, all of these demonstrations made by Mr.
2 Murray occurred after your observations on the 23rd and 25th
3 and essentially after the end of the videotape, which is
4 Staff Exhibit 5, is that correct?

5 A [Witness Joukoff.] That is correct.

6 Q But during your observations, is it not true that
7 Mr. Murray did none of these things?

8 A [Witness Joukoff.] That is correct.

9 MR. BACHMANN: I just wanted to set the record
10 straight, Your Honor, as to when the demonstration occurred.
11 Your Honor, the staff, as I indicated earlier, has attempted
12 to break down its prime case into three parts. The first
13 was the establishment of the facts. The second one was
14 basically a general commentary and explanation of the Board,
15 which we have now completed. The third part of the case
16 would involve the appropriateness of the sanction.

17 For that, Mr. James Lieberman, the Director of the
18 Office of Enforcement, will testify as to the reasons for
19 the particular sanction chosen. At this stage, I believe it
20 might be more efficient if we held Mr. Lieberman's direct
21 and allowed the cross examination of Mr. Joukoff and Mr.
22 Skov rather than proceed all the way through to Mr.
23 Lieberman and then come back.

24 JUDGE COTTER: We would do that anyway, Mr.
25 Bachmann. Are you finished with your direct?

1 MR. BACHMANN: I am finished with the direct
2 examination of Mr. Joukoff and Mr. Skov for this portion of
3 the case. I would, of course, reserve the right to have
4 rebuttal testimony based on cross.

5 JUDGE COTTER: Mr. Murray, do you have any
6 questions for these two gentlemen?

7 MR. MURRAY: Yes, just a few.

8 MR. BACHMANN: Excuse me, Your Honor. Just one
9 small -- I would almost call it a housekeeping thing. It
10 might make it easier. Mr. Murray is not a lawyer and, as
11 such, there's probably a good case that some of his
12 questions may become statements and vice versa.

13 If he were sworn --

14 JUDGE COTTER: He wouldn't be alone in that, Mr.
15 Bachmann.

16 MR. BACHMANN: Were he sworn at this time, then we
17 could consider his statements as part of his testimony and
18 it might save some time later.

19 JUDGE COTTER: We'll wait until he makes a
20 decision about whether he wants to put on a case or not.

21 MR. BACHMANN: Could I ask him if he understood
22 what we -- I mean, I feel funny going up this way and back
23 this way.

24 JUDGE COTTER: I think we'll just proceed the way
25 we are. Go ahead with your questioning, Mr. Murray.

CROSS EXAMINATION

1
2 BY MR. MURRAY:

3 Q The 23rd in particular. Did you observe whether I
4 had a survey meter?

5 JUDGE COTTER: One, speak into the mike and, two,
6 be specific as to who you're addressing.

7 MR. MURRAY: Okay.

8 BY MR. MURRAY:

9 Q I guess, Dave, I'll address that to you. This is
10 on the 23rd of October. This is because Phil said you
11 weren't watching all the time and Dave was. But did you
12 notice that I had a survey meter and can you explain where I
13 had it, how I carried it?

14 A [Witness Skov.] On October 23, 1990, when we were
15 observing your operations, I noticed that you had a piece of
16 equipment on your belt. It was yellow in color. At that
17 particular time, I did not realize until later, after we had
18 interviewed you two days later on October 25, that you had
19 apparently been wearing a Victoreen Model 400 radiation
20 survey meter.

21 So at the time of our inspection of your
22 activities on October 23, I did observe a piece of equipment
23 being worn on your belt. I did not realize that was a
24 survey meter. At the same time, I also noted that there was
25 another radiation survey meter that was positioned on the

1 truck at the job site and had not been moved.

2 I did not observe any other radiation survey
3 meters, for example, in the trench.

4 Q Okay.

5 A [Witness Skov.] I would also like to add that at
6 no time did I observe you actually using your survey meter,
7 which I later found out, as I said before, that was
8 positioned on your belt. That is you did not actually
9 remove the survey meter from your belt and conduct a survey
10 with it, nor did I observe you actually looking down at the
11 survey meter.

12 Q You never observed me looking down at it.

13 A [Witness Skov.] No.

14 Q Explain how you would ensure that the source -- I
15 know you've done it once, but how would you ensure that the
16 source was retracted into the fully shielded position on a
17 camera, the 660 in particular, the camera I was using?

18 A [Witness Skov.] How I --

19 Q Yes. How do you know that it's fully retracted,
20 other than -- I'm talking particularly about the survey
21 meter. How would you know that it was retracted yourself?

22 A [Witness Skov.] If I were conducting the
23 radiographic operations, is that what you're asking?

24 Q Yes.

25 A [Witness Skov.] If I were conducting the survey,

1 I would be using a survey meter, hand-held, in front of me
2 and I would be conducting a circumferential survey around
3 the camera and the source guide tube. And only with that
4 step would I be able to confidently -- and this is assuming
5 that the survey instrument was operable and was calibrated.
6 Using a calibrated and operable survey instrument would be
7 the only method that I would consider as confirming for sure
8 that the source had been fully retracted in its shielded
9 configuration.

10 Q Okay. Say you're at the crank, you're
11 approaching, what would make you lead to believe that it was
12 in the shielded position and, if not, would you know before
13 you approached the camera that it wasn't in the shielded
14 position? How would you know it wasn't?

15 A [Witness Skov.] The answer to that question would
16 be I wouldn't know, not unless I had a survey meter and was
17 using it as I approached the camera.

18 Q So you're saying if it's in the collimator or if
19 it's in the hose and you're 25 feet away, you wouldn't know
20 until you came up and you surveyed around the camera.

21 A [Witness Skov.] No, that is not correct. I would
22 not know that until I was using my survey meter as I
23 approached the camera and was at the same time conducting
24 the survey as I was approaching the radiographic exposure
25 device.

1 Q But you'll get a reading, you'll know that it's
2 been retracted. I mean, you will suspect that it's been
3 retracted at a distance of 25 feet or more because the
4 intensities are high enough to be able to do that.

5 A [Witness Skov.] Well, that is a --

6 Q I say suspect. I don't say that you -- you can't
7 ensure that it's in until go up there.

8 A [Witness Skov.] The only way that I would be --
9 let me back up. Let's suppose that the source had not been
10 fully retracted and it was at some point, at some location
11 in the source guide tube, including the collimator. I would
12 expect that the radiation level would increase as I
13 approached that location, as I was walking towards the
14 camera.

15 However, that would not necessarily indicate that
16 the source was fully shielded, because it's possible that
17 the source, even if you had fully retracted the source, if
18 you had retracted the source into the camera, that it was
19 not fully retracted; that is, the source could be retracted
20 only to a point where the source capsule, the iridium-192
21 source was just within the exit port of the exposure device.

22 Therefore, you would have a collimated beam of
23 radiation. So, yes, a survey meter would be necessary in
24 approaching the camera and would tell you if the source was
25 out somewhere in the source guide tube. However, if the

1 source had been retracted even in a position where it were
2 not fully retracted in the camera, the only way you would be
3 able to tell that the source -- where the source was in that
4 particular situation would be if you were to conduct a
5 survey around the circumference of the exposure device.

6 Q You know about the meter that I had, the 400, the
7 Victoreen. Explain why --

8 A [Witness Skov.] The one that you were using on
9 your belt.

10 Q Yes, the yellow one. You've had enough of the
11 literature, the nomenclature to understand how it operated.

12 A [Witness Skov.] Correct.

13 Q The way it does operate is when it pegs off-scale,
14 the alarm activates. Now, explain to me why or, better yet
15 -- well, why I would have to -- why I'd have to take it off
16 and read it while I'm approaching as opposed to listening to
17 it. In your opinion, why would you want to read it as
18 opposed to listening to the alarm?

19 A [Witness Skov.] The answer to that is that the
20 alarm is an output. It's reading off the output of the
21 survey meter. Therefore, you've got two separate devices,
22 basically. You've got an alarm device which gives an audio
23 indication and you've got a survey meter which reads off the
24 detector, basically.

25 I would not want to rely on a speaker only because

1 the speaker itself perhaps could even malfunction as opposed
2 to actually looking at the meter itself, the survey meter.

3 Q This particular, it's not like an audible rate
4 meter. This thing -- the 400, in fact, does peg out -- when
5 it pegs off-scale -- if you put it on a two MR scale and it
6 hits ten MR, it pegs out, it alarms, and it goes by what the
7 meter reads. They aren't separate. The audible rate meter
8 is part of the meter itself. So when the meter rises up and
9 pegs out, that's when the meter goes off, whether it be ten
10 or 100 MR.

11 In fact, the two are the same. So if the meter
12 didn't work, if I looked down and the meter didn't work,
13 then the alarm wouldn't work.

14 A [Witness Skov.] You're describing a situation
15 that's true as designed. However, I'm certainly not
16 convinced that the alarming mechanism would give an audio
17 signal which is dependent only upon the signal output from
18 the survey meter. It's possible that the alarm couldn't
19 alarm by itself, not in response to radiation intensity.

20 Q Let me take it a step further. While you're
21 cranking in and out, as you know, the intensities rise and
22 fall from the collimation position to the shielded position.
23 They will rise and fall and this meter will activate.
24 Knowing that, wouldn't you -- I mean, what I'm getting at,
25 you're accusing me of being unsafe.

1 I'm not refuting what you and Philip found, that I
2 didn't survey. What I'm trying to do is bring this back
3 down to a -- to moderate what you and Philip found. So I
4 guess what I'm getting at is that the meter sounds oif. If
5 I crank out, the meter automatically sounds. I know -- and
6 when it gets to the collimator, it goes off.

7 When I return it, it goes off. While it's being
8 retracted and it returns to the camera, it goes off. When I
9 approach, without having to look down, the meter, if it's
10 (, even if -- the thing is that if it isn't out, it will
11 keep going off.

12 You've brought up the situation where it could and
13 it could very well be stuck. In most cases, if a source is
14 stuck, it's stuck right there at the porthole. But whether
15 you're looking at the meter or not or you have it in your
16 hand, you're still there within that range of the front of
17 the camera. You'll know it when you get there. Regardless
18 of whether it's an alarm, whether it's a meter, you're still
19 going to know it's exposed.

20 A [Witness Skov.] What you're describing is a
21 situation similar to the way you would be wearing an
22 alarming pocket dosimeter. First of all, in that light, an
23 alarming pocket dosimeter is only meant -- and that's the
24 way basically you're describing this situation, even though
25 it is a survey meter.

1 An alarming pocket dosimeter is only meant to be a
2 redundant device, to give additional indication of a
3 possible radiation hazard; in a high radiation field, in
4 other words. So what you're saying basically, the way I see
5 it, is that you're using it as a substitute for conducting
6 your radiation survey.

7 The fact that the survey meter was on your belt
8 and you're only using it as an audible indicator indicates
9 that you're using it as a pocket -- basically as an alarming
10 pocket dosimeter.

11 Secondly, the survey meter was not placed
12 properly. You would have to place it in front of you and
13 not on your hip, because your body itself is going to
14 provide some shielding effect from the radiation field,
15 particularly if you're walking up to an exposure device and
16 you're trying to determine whether or not the source is in a
17 safe configuration, safe shielded configuration.

18 Having the survey meter on your belt completely
19 opposite of a collimated beam of radiation is certainly an
20 inadequate type of survey, at the very minimum.

21 Q When you say the opposite side of --

22 A [Witness Skov.] In order to determine where the
23 source was located, let's say that the source was at the
24 exit port and was only partially shielded by the camera and
25 the only remaining radiation was being emitted out the exit

1 port. I don't believe that you would be able to actually
2 determine if there was a high radiation field by having a
3 survey meter on your belt.

4 First of all, you would have to actually reach --
5 I could demonstrate to you, but you would have to actually
6 reach around where the exit port is and conduct a survey at
7 that point to pick up or detect any radiation field at that
8 location. But if you have a survey meter that's on your
9 belt, first of all, you're several feet away. Secondly,
10 your body is partially shielding whatever increased
11 radiation field that may exist due to scatter.

12 So I am certainly not convinced that the way --

13 Q I'm not trying to convince you. What was the
14 other thing? First of all, if a source, even with it fully
15 retracted, it will get a high beam of radiation at the exit
16 port because you don't have shipping plug in and there is no
17 lead, like your cap here is lead-filled or filled. So
18 you'll always have a high radiation field there if you put
19 it in, if you put your meter in front of that hose. You're
20 always going to get something.

21 Now, if you're talking about if it's sticking out
22 a little bit, you'll know it. You'll know it whether --
23 well, like I say, I'm not going to defend the fact that it
24 was on my belt or whether I had rate meters or on it and
25 things like this.

1 This states that it's supposed to be a survey and
2 it should be surveyed. What I'm getting at is -- let me go
3 on with the next question. On this date, you stated that
4 surveys weren't taken, that there were people inside the
5 restricted boundaries. I was wondering why you and Phil
6 didn't come out on that day, come down and shut down my
7 operation and bring it to my attention then if you thought
8 unsafe operations were going on.

9 A [Witness Skov.] Because, first of all, I could
10 observe that you were using a collimator and that the
11 radiation field was reduced considerably from what it would
12 be if you had not been using a collimator. Secondly, I
13 noticed that all of the personnel, even though they were
14 within the restricted area, they were still some
15 considerable distance away, at least 25 feet, I estimate,
16 away from the source.

17 Thirdly, I would have stopped the operation if I
18 had seen the individuals who had entered the restricted area
19 actually walk towards the collimator with the exposed
20 source.

21 Q You would have had to do that. Why was this
22 particular job that I was on surveyed and no others during
23 that week, because I was at several other jobs and you and
24 Phil waited on top of this coral bank for me to arrive at
25 this one. Why was it just this job that was isolated and

1 really had not that much public traffic? When I say public
2 traffic, this isn't a place where pedestrians walk. It was
3 in an isolated area off of a highway, 50 feet from the edge
4 of the throughway or the thoroughfare. Why this job?

5 A [Witness Joukoff.] To answer your question, the
6 Office of Investigations of the NRC has conducted numerous
7 investigations in the Hawaiian Islands regarding the
8 activities of NRC licensees that conduct radiography similar
9 to your company. I know I've discussed these with you in
10 the past and you're aware personally of the other
11 investigations that have been done.

12 One of the problems that we have encountered in
13 conducting these investigations, as I was the investigator
14 that conducted two of them, was that the oil refineries
15 where you were working at other times -- in particular, I
16 remember you mentioned the Hawaiian Independent Refinery,
17 the Chevron Refinery.

18 You were working inside the controlled gates and
19 fences of the owner of the refinery. And at other times
20 when we have attempted to make surveillances and find out
21 exactly what our licensees are doing in the field with the
22 radiographic sources that we license them to use, every time
23 that we appear at the gate, our licensees are advised in de
24 that the NRC is at the gate.

25 Consequently, we're not able to get a true

1 indication of what our radiographers really do in the field.
2 In this particular instance, it was occurring out at a
3 public area, which made us able to observe, without going
4 through any intermediaries, specifically what was
5 transpiring by an NRC licensee while he conducted licensed
6 activities.

7 Q I was wondering on that day, on the 23rd, I guess
8 that was a Tuesday because you showed up on Thursday and
9 that's when you talked to me. Did you figure the doses of
10 the people that you witnessed coming into the restricted
11 area? Do you have that? Do you know what the dose rates
12 were and do you know what the doses that would have been
13 acquired by these personnel?

14 A [Witness Skov.] I had a rough indication. When I
15 was observing the operations on the 23rd, I had a rough
16 indication of what the approximate radiation exposure levels
17 would be or the exposures that the individuals would receive
18 at the locations that they occupied.

19 Subsequent to that date, after the inspection, I
20 did calculate the actual exposures that the individuals
21 would have mostly likely received under very conservative
22 conditions.

23 Q Tell me if these sound reasonable. The man on the
24 dirt road you said walked through my boundary, I've got
25 six MR per at that point; not six MR that he acquired,

1 but six MR per hour as a dose rate.

2 JUDGE COTTER: Is this October 23?

3 MR. MURRAY: Excuse me. This is October 23.

4 BY MR. MURRAY:

5 Q This is a man that was walking on what was
6 considered by myself an inaccessible area of coral landfill.
7 It was a worker. I take it you guys had a picture of him.
8 Would six MR per hour be unreasonable? Do you recall that?
9 He was approximately 60 feet from where I was shooting.

10 A [Witness Skov.] Those numbers don't correspond to
11 what I believe the situation refers to. In my mind, the
12 individual that had walked on the north side of the trench -
13 -

14 Q Your side.

15 A [Witness Skov.] North side of the trench, which
16 would be towards the berm, was approximately at a distance
17 of 25 feet from the source at the closest point that the
18 individual walked. On the 25th, I made a radiation survey -
19 -

20 Q You're correct. Excuse me. That is correct.

21 Fifteen to 20 feet I have and that's what this intensity is
22 based on, is 15 to 20 feet, the six MR. So 25 feet would be
23 -- you're right, Dave.

24 A [Witness Skov.] On October 25, I attempted to
25 make a radiation survey to determine what approximate

1 radiation levels the individual was exposed to. One source
2 configuration that I used was to have the source pointed
3 towards the road so that the individual would be exposed to
4 the radiation that had already passed through the collimator
5 and was considerably attenuated, and I measured 15 MR per
6 hour.

7 Q When did you do this?

8 A [Witness Skov.] On the 25th.

9 Q When I had my source pointing towards you, towards
10 the road.

11 A [Witness Skov.] No. The source in that
12 configuration was pointed towards the road. On the opposite
13 side, I made a survey to indicate what the radiation level
14 was at the location where the individual walked.

15 Q Near the coral --

16 A [Witness Skov.] To try to reconstruct the
17 exposure levels.

18 Q And you came up with what on this thing?

19 A [Witness Skov.] I came up with approximately 15
20 MR per hour.

21 Q On the day that I pointed my source towards the
22 bank and you stood on the bank, you came up with --

23 A [Witness Skov.] No. No. To use the clock face
24 again as a description here, the source was located at 8:00.

25 Q Okay.

1 A [Witness Skov.] So it was pointed towards the
2 road, Malakole Street.

3 Q Okay. It's pointed toward the --

4 A [Witness Skov.] The paved road. And I measured
5 15 MR per hour on the opposite side; in other words, the
6 north side of the trench at a location where the individual
7 had walked.

8 Q And you did this on the 25th when I exposed the
9 source.

10 A [Witness Skov.] Yes. After -- you remember that
11 we made a number of exposures and I was conducting surveys.

12 Q Yes. I recall.

13 A [Witness Skov.] One of those surveys was made at
14 a location which I tried to reproduce as the position where
15 the individual had walked on the north side of the trench on
16 the 23rd of October, to try to get an indication of what
17 kinds of radiation levels that individual would have been
18 exposed to.

19 Q I recall two. I recall one I pointed towards the
20 road. You came up with 6. --

21 A [Witness Skov.] 6.5. That was a separate
22 radiation survey. Correct.

23 Q I turned it the opposite way. You came up with
24 three. You told me you came up with three on the road on
25 that day. You didn't tell me 15. And it was pointing at

1 you, it wasn't collimated the opposite way.

2 A [Witness Skov.] No. You're confusing the
3 radiation level that I measured up on the berm. That was,
4 in fact, three MR per hour.

5 Q Then I don't understand where the other -- because
6 that's where the man would have been on that road. No, no,
7 no. Okay. You were on the dirt road, further down from the
8 23rd naturally. We were on the other side of the loop,
9 correct? There was a bank in front of me. My non-
10 collimated end was pointing into the bank, if you recall.
11 The pipe went over the bank and down back into the ditch.

12 You were up towards the coral, on the road. You
13 told me to expose that side and I did so. I asked you what
14 you got, you told me three MR as opposed to 6.5 towards the
15 road, which would have been correct because that bank is
16 higher by a couple of feet.

17 The bank that you were on -- not only that, the
18 pipe is situated farther towards that bank, so you have an
19 angle hitting earth that isn't quite the same as the side
20 you were on, the road side, the roadway. I recall you
21 coming up with three MR. I don't recall any 15 MR at that
22 point.

23 A [Witness Skov.] Well, there were a number of
24 different surveys that I made.

25 Q This one I don't remember.

1 A [Witness Skov.] It's really beside the point. I
2 measured the 15 MR per hour, the individual was there for
3 only a short period of time. So he would not have received
4 anywhere near two millirem exposure.

5 Q Well, would this person -- naturally, I went back
6 because of what had happened, reenacted the whole thing. By
7 your pictures, I could tell where the forklift was and
8 things of this nature. This man told me where he had
9 walked. We reenacted that and this is how I came up with my
10 figures. Like I say, where he walked would have been a six
11 MR per hour. He would have been walking -- in fact, if I
12 posted this, if this side was posted on that day, he would
13 have still been walking beyond my posted area because I only
14 had several -- a few exposures there and I based it on an
15 isodose.

16 I did not base it on the intensity at that point.
17 It was based on the number of exposures made within one hour
18 at that point, during that point of my inspection.

19 JUDGE COTTER: Mr. Murray, you're going to have a
20 chance to testify directly yourself.

21 MR. MURRAY: Okay. Sorry. I knew this would
22 happen.

23 JUDGE COTTER: Maybe this would be an appropriate
24 time to break and you can think about what specific
25 questions you had for these two witnesses.

1 MR. MURRAY: Then I'll forget. Can I just ask him
2 about the boundaries?

3 BY MR. MURRAY:

4 Q You indicated that you feel that the whole
5 perimeter of the restricted area should be surveyed, and I
6 want to know why you think that and why it should be, why
7 there are not other methods of surveying the boundaries as
8 opposed to walking the line, walking the entire controlled
9 area.

10 A [Witness Skov.] If you're implying that the
11 entire, every inch of the perimeter needs to be surveyed,
12 that was not what I meant. What I had meant was that enough
13 of the perimeter had to be surveyed to give you a very
14 positive indication and you were satisfied that there were
15 no areas that the radiation levels were different than from
16 what you knew would exist at those locations.

17 Obviously, in a situation where you have an open
18 field, it would not be necessary -- let's say you're using a
19 non-collimated source. It would not be necessary to survey
20 around the entire circumference of the boundary, because
21 basically you've got a panoramic radiation field which is of
22 uniform intensity around the entire perimeter.

23 But once you introduce the situation where you
24 have obstacles, earth embankments, anything that could
25 possibly reduce or even increase the radiation levels as a

1 result of radiation scatter, then you have to get into a
2 mode where you're going to be conducting enough radiation
3 surveys of the perimeter to positively establish that the
4 boundary is set at the proper point.

5 In this particular case, it's two MR per hour. In
6 the situation where you were conducting radiographic
7 activities, you had a trench as one variable and you had a
8 number of different locations where the source was being
9 placed. So you had a multiple number of different types of
10 exposure configurations which would lead to different
11 radiation intensities at different locations.

12 Q I recall you bringing that up and that you said --
13 well, it would change. As opposed to the 23rd, I moved
14 to another point on the 25th and that the conditions changed
15 because of that movement.

16 A [Witness Skov.] Yes.

17 Q On this particular job, I'm dealing with four
18 pipes. On each one of these days, I'm x-raying four pipes.
19 I'm doing the one near the side of the bank, the one in the
20 center. As opposed to the one in the center and the one
21 against the bank, the shielding -- the only difference
22 between the two is the bank.

23 If I'm shooting at 60 -- well, we'll use the clock
24 like you were using. You're up at the bank. When I'm
25 shooting up, there's a bank on this side, there's a bank on

1 this side. The pipes in between, like Phil said, don't make
2 that much of a difference. It's the bank, it's the earth
3 that offered me more shielding than anything else.

4 So whether I moved to the outside or whether I
5 moved to the center, the only difference was that the beam,
6 the radiation was actually at a different angle. So if I
7 moved to this side and over here it would be a little less.
8 On this side, I would be shooting right into the bank and
9 right into the soil.

10 All the readings I have taken, taken prior to
11 these, are based on calculations -- were based on prior
12 surveys. When there's people around, then naturally I'll go
13 up and I'll survey these certain sections or where they are
14 to make sure, in fact, that they're not in a high radiation
15 area.

16 So when you say that -- when I came back on
17 Thursday, and I was there on Tuesday, that I can't guarantee
18 that the radiation levels are going to be -- what I based it
19 on was an isodose and they're far less than two MR and I
20 know this because of my calculations, because of the number
21 of exposures I'm making.

22 You say that I can't guarantee this. I want to
23 hear you say -- explain again how I can't guarantee this in
24 a situation like that, because these situations are
25 identical. They're exact. It doesn't vary that much. It

1 doesn't vary more than one MR.

2 JUDGE COTTER: I think I heard a question in
3 there, Mr. Murray.

4 MR. MURRAY: I tried to fit one in. Maybe I
5 should stop.

6 JUDGE COTTER: The question I heard was why,
7 based on his prior experience and calculations, is he
8 presenting a risk to the public health and safety.

9 WITNESS SKOV: I'm sorry. Would you repeat that,
10 Your Honor?

11 JUDGE COTTER: If I understood his question
12 correctly, he was saying that based on his prior experience
13 with that site and his calculations and whatnot, why you
14 think that he is presenting risk to the public health and
15 safety?

16 WITNESS SKOV: Well, the basis for my reasoning is
17 that there were enough differences in the location of the
18 source, with the collimator being used, inside the trench
19 and its location relative to any areas that may be occupied.

20 Now, I've stated that before. The radiation
21 levels can change dramatically if you're in a trench and,
22 yes, it does depend upon the angle at which the source is
23 directed towards the wall of the trench.

24 So what you've got is one factor which takes into
25 account the position of the source inside the trench, the

1 depth the source is relative to the top of the ground, any
2 pipes that are in the way which may serve as shielding or
3 scattering. You've got the walls of the trench itself which
4 are not all uniform along that entire trench.

5 MR. MURRAY: That's correct.

6 WITNESS SKOV: There are areas that the slope of
7 the trench wall was very gradual and at other points they
8 were very acute; in other words, they were almost at like a
9 90-degree angle, where the ground and the trench meet. The
10 depth of the trench itself varied. So that means that the
11 position of the source relative to ground level varied.

12 Also, you had the berm, the position of the berm
13 where we were located on the 25th. We were certain far
14 closer to the exposed source than we were on the 23rd.
15 That's an entirely new variable. I think you admitted that
16 there weren't any surveys conducted on the berm, for
17 example.

18 BY MR. MURRAY:

19 Q No. You mean up where you two were.

20 A [Witness Skov.] That's correct.

21 Q No.

22 A [Witness Skov.] So I think I have described
23 enough variables in this whole scenario where you conducted
24 radiographic activities on the 23rd and 25th, there were
25 enough variables which would lead to different or differing

1 radiation levels that could be measured at various points
2 around that trench and above the trench to justify the need
3 for conducting a radiation survey with an instrument at
4 certain portions of the radiation restricted area.

5 Q Isn't it possible from a point which isn't exactly
6 where the boundary is, I can estimate, I can calculate where
7 that boundary should be just by taking a reading?

8 A [Witness Skov.] That is correct. However, I
9 think you also know that it is an NRC requirement that
10 radiographers conduct a confirmatory survey to verify that
11 the position of that boundary is correct and can't be done
12 only by calculation.

13 Q Can I tell you what it says? Would this be all
14 right if I just read this?

15 JUDGE COTTER: What are you referring to?

16 MR. MURRAY: He said that the NRC --

17 JUDGE COTTER: What is it you're --

18 MR. MURRAY: -- requires you to make surveys,
19 physical surveys of your boundaries. I'm going to read in
20 the NRC 10 CFR exactly what it says on surveys. Survey
21 means an evaluation of the radiation hazards incident to the
22 production, use, release, disposal, or presence of
23 radioactive materials. I'll skip a little bit, and when
24 appropriate, such evaluations indicate a physical survey of
25 the location of the materials and measurements of the levels

1 of radiation or concentration of radioactive material
2 present.

3 JUDGE COTTER: Are you talking about the
4 definitions in Part --

5 MR. MURRAY: This is the definition of a survey.

6 MR. BACHMANN: Do you have the citation?

7 MR. MURRAY: This is 20.201.

8 JUDGE COTTER: I have a feeling this would be a
9 good point to take a break. We'll recess for lunch. You
10 can continue your questioning when we resume.

11 MR. MURRAY: Can I just say one thing?

12 JUDGE COTTER: You can say anything you want when
13 it's your time to put direct testimony in, but saying
14 something now doesn't mean anything.

15 MR. MURRAY: I mean just one question.

16 JUDGE COTTER: Sure.

17 MR. MURRAY: I don't want Phil and Dave here to
18 feel like I'm --

19 JUDGE COTTER: Just give me the question.

20 BY MR. MURRAY:

21 Q I want to ask David and Phil, either can answer or
22 both can answer, but -- and I'm asking you personally.
23 Knowing this situation, do you feel that I'm unsafe as a
24 radiographer, that you would not trust me out on the field,
25 that I don't have enough knowledge --

1 JUDGE COTTER: You can't ask that question.

2 MR. MURRAY: I can't ask that?

3 JUDGE COTTER: That is the question we are
4 supposed to answer.

5 MR. MURRAY: I'm sorry. Forget that. We'll take
6 a break, I guess.

7 JUDGE COTTER: Good. We will recess until 1:30.

8 [Whereupon, at 12:20 p.m., the hearing was
9 recessed for lunch, to reconvene this same day at 1:30 p.m.]

[1:37 p.m.]

JUDGE COTTIR: Back on the record. The hearing will come to order. Mr. Murray, do you want to continue with your questioning?

Whereupon,

DAVID SKOV,

a witness, was called for examination by counsel on behalf of the Nuclear Regulatory Commission, and, having been previously duly sworn, was further examined and testified as follows:

Whereupon,

PHILIP Joukoff,

a witness, was called for examination by counsel on behalf of the Nuclear Regulatory Commission, and, having been previously duly sworn, was further examined and testified as follows:

CROSS EXAMINATION

BY MR. MURRAY [resuming]:

Q Just two things, Dave. The doses that were received by the people in the restricted area and the next thing was the dose levels in the restricted area. Again, the 2th when you showed up and you took the levels.

A [Witness Skov.] Yes.

Q I wanted to know what you came up with as far as

1 my boundaries. What I'm getting at, were my boundaries
2 correct on where they were as far as my signs and things? I
3 mean, I understand it wasn't rope, but I'm talking primarily
4 about the posted restricted area.

5 A [Witness Skov.] On the south side of the trench,
6 you had cones marked "radiation area" as a boundary, as a
7 posted boundary.

8 Q That's the direction that you and Phil came from
9 when you approached me.

10 A [Witness Skov.] Correct.

11 Q Okay.

12 A [Witness Skov.] During one of the simulated
13 exposures with the source pointed towards Malakole Road, I
14 measured 6.5 MR per hour at the position of the cone, which
15 would represent your restricted area boundary. That
16 compares with the two MR per hour boundary which is
17 established by your operating and emergency procedures.

18 JUDGE COTTER: Did you take any other
19 measurements, Mr. Skov?

20 WITNESS SKOV: I took other measurements on the
21 north side of the trench; one at approximately 25 feet from
22 the source and I measured 15 --

23 JUDGE COTTER: No. At the boundaries. Did you
24 measure at any of the other boundaries and find --

25 WITNESS SKOV: No, not at the other boundaries,

1 other than at a position on the bluff overlooking the job
2 site.

3 JUDGE COTTER: So there was only the one
4 measurement at the one cone.

5 WITNESS SKOV: And the other measurement would e
6 at the bluff position.

7 JUDGE COTTER: The result of that was?

8 WITNESS SKOV: It was three MR per hour at one
9 point and two MR per hour at another point in time.

10 JUDGE COTTER: Thank you.

11 WITNESS SKOV: I would also like to mention that
12 since this whole matter has come up concerning the two MR
13 per hour significance, there's nothing really magical about
14 the two MR per hour as a number. The real purpose of
15 establishing a restricted area boundary, whether it's two MR
16 per hour or two MR in any one hour, is to prevent the
17 possibility that members of the public could enter the high
18 radiation area.

19 So the purpose of setting that outer boundary, the
20 outer restricted area boundary is to preclude individuals
21 from not only crossing that boundary, but also entering the
22 high radiation area boundary and seriously receiving high
23 radiation exposures. So the actual number is immaterial.

24 MR. MURRAY: And I agree with that.

25 WITNESS JOUKOFF: If it please the Court, Your

1 Honor, also getting back to the surveys being made, that Mr.
2 Skov made at the restricted area boundary, there was no
3 posting of a restricted area boundary on the north side of
4 the trench. There were no cones and no measurements were
5 made there because it didn't exist. I just wanted to
6 clarify that point.

7 BY MR. MURRAY:

8 Q The doses received by the people that were
9 suspected of being -- or witnesses being inside the
10 controlled area, the restricted area.

11 A [Witness Skov.] The doses that I calculated using
12 fairly conservative assumptions probably were less than two
13 millirem. So as was already stated in the inspection
14 report, the maximum doses that any of the six individuals
15 likely would have received, even though they were within the
16 restricted area, were less than two millirem.

17 However, the potential did exist for those
18 individuals to receive much higher doses.

19 MR. MURRAY: I think that's all I have, sir.

20 JUDGE COTTER: All right.

21 JUDGE FOSTER: I have a question or two for Mr.
22 Skov. These go to the survey of the boundary, the two MR
23 per hour boundary. From your earlier discussions, it seemed
24 to me that it would almost be indicated that a separate
25 survey be made each time the source was changed in some way;

1 located on a different pipe, aimed in a different direction.

2 Could you give us an idea of how often you think
3 that a two MR per hour boundary ought to be established
4 around a job site?

5 WITNESS SKOV: The way I visualize a radiographer
6 conducting this type of survey would be where the
7 radiographer would choose the most conservative exposure
8 situation; that is, a situation in which the orientation of
9 the source would be such that the radiation levels would be
10 at a maximum; and to then position the source such that
11 those levels would be measured at the boundary.

12 So the radiographer would position the source,
13 would make the radiation survey at the start of radiographic
14 operations, and once he knew that the radiation levels at
15 any point around the perimeter of the restricted area
16 boundary were such-and-such value, any additional
17 orientations of the source would produce radiation levels
18 that would be less than that.

19 So the initial radiation survey would be made in a
20 conservative configuration and the boundaries set
21 appropriately. To answer your question, it would not be
22 necessary for the radiographer to, let's say during the
23 day's operation, every time he changes the position of the
24 source on a pipe, it would be necessary for him to conduct
25 another restricted area boundary survey.

1 JUDGE FOSTER: Is there anything in the operating
2 and emergency procedures that would go to that kind of an
3 explanation?

4 WITNESS SKOV: No, sir, they do not. They only
5 provide that a survey will be conducted during -- without
6 reading the requirement -- would be conducted during each
7 radiographic operation.

8 JUDGE FOSTER: Is the language which we read here
9 in the operating procedures fairly typical of that of
10 radiographic operations that you're familiar with? To say
11 it another way, is this particular point about as well
12 explained in the operating procedures for Fewell Company as
13 it is in other radiographic companies' licenses?

14 WITNESS SKOV: My experience with reviewing other
15 applicants' applications for radiography license makes me
16 believe that the description of the circumstances of how the
17 surveys are to be performed and when they're to be performed
18 are less detailed in this particular license application
19 than in some other license applications. However, they do
20 provide enough detail to indicate that the surveys are to be
21 performed corresponding to each radiographic operation.

22 JUDGE FOSTER: When the staff reviews these
23 license applications when they come in, does the staff have
24 any standard review plans or the equivalent of this for
25 cross-checking the kinds of information and the depth to

1 which it goes?

2 WITNESS SKOV: Yes, we do, Your Honor. The
3 particular standard review plan that is keyed to Regulatory
4 Guide 10.6 does establish or provide guidance to the
5 reviewer that radiographer licensee applicants should be
6 conducting surveys at the restricted area boundary using the
7 two MR per hour guideline. And if they do not wish to
8 follow that particular guideline, they need to submit
9 information, additional information, instructions to
10 radiography personnel on how the radiographers are to
11 calculate how much exposure -- what the exposure rate would
12 be taking into account the concept of two MR in any one
13 hour.

14 JUDGE FOSTER: But the license application with
15 these operating procedures, emergency procedures, was able
16 to pass the NRC's standard review plan for radiographic
17 operations, is that correct?

18 WITNESS SKOV: That's correct, because it did
19 contain the very conservative radiation level concept of
20 using two MR per hour.

21 JUDGE FOSTER: But without specifying how
22 frequently that needed to be --

23 WITNESS SKOV: Without specifying that the
24 licensee would use the two MR in any one hour concept. That
25 is the licensee in this particular case, Fewell, did not say

1 that they wished to set up the boundary, the restricted area
2 boundary taking into account the two MR in any one hour and
3 they did not provide information to take into account the
4 number of exposures, the exposure duration, and the maximum
5 radiation level that would be allowed using that concept.

6 JUDGE FOSTER: Thank you.

7 WITNESS SKOV: One of the primary reasons that the
8 NMSS recommends that licensees submit their applications
9 using the two MR per hour concept is that that is a number
10 that is directly readable on a survey instrument. It's much
11 easier for radiographer personnel to follow. And then try
12 to come up with a very dynamic -- in a dynamic situation,
13 they would have to determine the number of exposures that
14 they're planning to make in any one hour.

15 They would have to determine the length of each
16 exposure. They would have to use an equation to determine
17 what the maximum radiation level was at a particular
18 boundary. That's just for planned exposures. If the number
19 of exposures or any other conditions were to change at any
20 time during that one hour, there would have to be a
21 continual adjustment made by the radiographer.

22 So that's a much more difficult thing for the
23 radiographer to do than to simply use the survey instrument
24 to indicate the maximum level that would be allowed and then
25 set their boundary at that level.

1 JUDGE FOSTER: I understand.

2 JUDGE COTTER: Mr. Skov, have you ever worked as a
3 radiographer yourself?

4 WITNESS SKOV: No, I have not.

5 JUDGE COTTER: How often have you observed
6 radiographers as you have in the circumstances before?

7 WITNESS SKOV: I have probably observed
8 radiographers conducting operations on two to three dozen
9 times over the course of ten years.

10 JUDGE COTTER: How many of those were here in
11 Hawaii?

12 WITNESS SKOV: I would estimate that the number
13 would be on the order of perhaps five to ten.

14 JUDGE COTTER: Did I understand you to say that
15 you first began this kind of observation within the last ten
16 years?

17 WITNESS SKOV: No. I've been working for the NRC
18 for ten years and soon after I was employed by the NRC, I
19 started performing industrial radiography inspections.

20 JUDGE COTTER: So about two to three dozen and
21 about ten of them here.

22 WITNESS SKOV: Yes. Now, that is actual
23 performance of radiography. I have conducted roughly 80
24 inspections of radiographer licensees.

25 JUDGE COTTER: I'm not talking about the

1 paperwork. Is that what you meant? On how many occasions
2 did you observe Mr. Murray?

3 WITNESS SKOV: I'm sorry, Your Honor. On how many
4 occasions or over what period of time?

5 JUDGE COTTER: Before that, let me back up again.
6 In the two to three dozen observations that you've mentioned
7 over the last ten years, how many of those were done without
8 the radiographer's knowledge that you were observing him or
9 her, as the case may be?

10 WITNESS SKOV: None, Your Honor.

11 JUDGE COTTER: All of them were done when the
12 radiographer knew you were observing them.

13 WITNESS SKOV: Well, many of the -- most of the
14 radiographic inspections that I've made have been conducted
15 where the radiographer knew at the outset that I was there.
16 There have been some radiography field inspections that I've
17 conducted where I was present at the site, but the
18 radiographer didn't initially know who I was. So I would
19 observe radiography personnel doing operations and at some
20 point during that field inspection, I would announce to them
21 who I was.

22 JUDGE COTTER: Let me go back to the question that
23 interrupted both of us. That was how many times have you
24 observed Mr. Murray perform his radiographic duties?

25 WITNESS SKOV: None previous to the October 23,

1 1990 i ction.

2 JUDGE COTTER: So you have observed him twice.

3 WITNESS SKOV: I've observed him on two different
4 days only.

5 JUDGE COTTER: What prompted you to observe? Was
6 that caused by the October 9 finding of nine violations in
7 the paperwork of Fewell?

8 WITNESS SKOV: That was prompted by a finding by
9 the previous inspection conducted approximately two to three
10 weeks earlier that there needed to be a followup to that
11 particular inspection since there was some doubt by the
12 previous inspection personnel that the program was being
13 operated in full compliance with NRC requirements.

14 There was an additional reason for conducting that
15 particular inspection, and that was for the reason of
16 following up on an allegation.

17 JUDGE COTTER: How many radiographic firms are
18 there in Hawaii?

19 WITNESS SKOV: There are currently three.

20 JUDGE COTTER: How many radiographers are there?

21 WITNESS SKOV: I believe there are approximately
22 six radiographer personnel that would be authorized to
23 perform radiography.

24 JUDGE COTTER: How many of them have you
25 observed?

1 WITNESS SKOV: Of the radiography personnel that
2 are currently authorized to perform radiography, the only
3 person that I've observed is Mr. Murray. There have been
4 other radiographers working for firms in Hawaii in the past
5 that I have observed doing field radiography.

6 JUDGE COTTER: Mr. Joukoff, let me direct the same
7 kinds of questions to you. Have you been involved in any
8 other observation, yourself, of Mr. Murray?

9 WITNESS JOUKOFF: No. The only operations of
10 field RT of Mr. Murray, field radiography of Mr. Murray were
11 made on October 23 and 25, 1990.

12 JUDGE COTTER: Have you been involved in
13 observations of other radiographers here in Hawaii?

14 WITNESS JOUKOFF: Yes, on one other occasion.

15 JUDGE COTTER: Has your office or anyone from your
16 office done any other observations of radiographers in the
17 State of Hawaii?

18 WITNESS JOUKOFF: My office has conducted other
19 investigations of radiography firms for violation of NRC
20 rules and regulations in the Hawaiian Islands, but the only
21 surveillances that have ever been done have been done by me.

22 JUDGE COTTER: Let me ask either one or both of
23 you what you know about Mr. Murray's training.
24 Particularly, has NRC ever conducted any examination or
25 observation in connection with Mr. Murray's training?

1 WITNESS JOUKOFF: I'll answer first since my
2 answer will probably be shorter. The knowledge that I have
3 of Mr. Murray's training is through the review of his
4 training records with Fewell Geotechnical, Limited and on
5 other -- I wouldn't call it training, but there was another
6 NRC inspection done by NRC inspectors that involved his
7 demonstrating his ability to conduct radiography or
8 explaining to our inspectors how he would go about doing
9 field radiography, the results of which are contained in an
10 NRC inspection report.

11 JUDGE COTTER: Do you know when that was done?

12 WITNESS JOUKOFF: The inspection was on October 4
13 or 5 of 1990. The report was issued at the end of October
14 of 1990. Other than that, that's all the knowledge that I
15 have of his training.

16 MR. BACHMANN: Your Honor, I have copies of that
17 inspection report, if you would like to see it or have it
18 introduced into the record.

19 JUDGE COTTER: I think we have to review the
20 bidding on all these exhibits. You've got quite a package
21 that has been spread around in the course of discovery and I
22 think we're going to need to look at which ones of those
23 things should be added to the record formally.

24 Mr. Skov, can you add anything to that?

25 WITNESS SKOV: There's very little to add to that.

1 The only experience that I have with Mr. Murray's
2 qualifications would be those that were provided in the
3 license application.

4 JUDGE COTTER: In the paper record back in Region
5 V.

6 WITNESS SKOV: That's correct.

7 JUDGE COTTER: Is my memory correct that the
8 discovery papers indicate that Mr. Murray should have been
9 audited in at least two consecutive quarters and was not?
10 That is that the performance of his duties should have been
11 examined by his employer?

12 MR. BACHMANN: Your Honor, I believe I've found
13 that particular reference.

14 JUDGE COTTER: You might just describe it.

15 MR. BACHMANN: This is an inspection report of an
16 inspection that was conducted October 4, 1990. It was sent
17 out under a cover letter dated October 25, 1990. On the
18 first page of it, under the heading "Results," it says "non-
19 apparent violations and no deviations were identified during
20 the inspection. The apparent violations are summarized as
21 follows," and then A reads "The radiographer was not audited
22 between February 10, 1990 and June 1, 1990, a period in
23 excess of four months. Radiography was conducted frequently
24 during these dates."

25 That is a summary of the statement. It indicates

1 that there is a -- yes. Section III of the report has a
2 more lengthy discussion of the internal audit program. What
3 I read was the summary.

4 JUDGE COTTER: All right. Does comport with you
5 gentlemen's understanding of when Mr. Murray was or was not
6 audited?

7 WITNESS SKOV: Yes. The same inspection report
8 that I'm looking at now indicates the same period of time,
9 between May 10, 1990 and June 1, 1990.

10 JUDGE COTTER: The reference that Mr. Bachmann
11 just made said February 10, 1990 to June 1, 1990.

12 WITNESS SKOV: I'm sorry. Correction. February
13 10, 1990 to June 1, 1990.

14 JUDGE COTTER: Do you know whether there was any
15 audit of Mr. Murray after June 1, 1990 by Fewell?

16 WITNESS JOUKOFF: If it please the Court, I can
17 look through some records. I believe there was, Your Honor.

18 JUDGE COTTER: If you would.

19 [Pause.]

20 JUDGE COTTER: As a matter of clarification, Mr.
21 Bachmann, on that section from this October 25 cover letter,
22 including the report. The inspection on October 4, the
23 reference is to "the radiographer." Am I correct in
24 assuming that that refers to Mr. Murray?

25 MR. BACHMANN: That is correct, sir.

1 JUDGE COTTER: At that time, did not Fewell have
2 two radiographers?

3 MR. BACHMANN: I've been informed that at that
4 time, that only Mr. Murray was actually performing
5 radiography. I also would like to add that Mr. Gary Martin
6 is listed as Radiation Safety Officer at that time.

7 JUDGE COTTER: I see. So while he could perform
8 radiography, he was not listed as a radiographer.

9 MR. BACHMANN: That is my understanding, Your
10 Honor.

11 WITNESS SKOV: Excuse me, Your Honor. Mr. Gary
12 Martin is authorized also as a radiographer on the license.

13 JUDGE COTTER: Okay. His name is on the --

14 WITNESS SKOV: Yes. But he has not routinely been
15 performing radiography.

16 JUDGE COTTER: So that there's no question in
17 anybody's mind that when this refers to "the radiographer,"
18 it is referring to Mr. Murray, because, in fact, Mr. Martin
19 was not doing radiographic work.

20 WITNESS SKOV: Yes. In the last inspection
21 report, where the activities relate to the October 23 and 25
22 inspection, where the report refers to "the radiographer,"
23 it is referring to Mr. Murray only.

24 JUDGE COTTER: Thank you.

25 WITNESS JOUKOFF: Your Honor, during the course of

1 my investigation involving Fewell Geotechnical, Limited, I
2 reviewed documents indicating that Mr. Murray had
3 radiographer and assistant quarterly audits on December 27,
4 1989, February 10, June 1 and July 20, 1990.

5 JUDGE COTTER: Do you know what the nature of
6 those audits were?

7 WITNESS JOUKOFF: The nature of the audits, to the
8 best of my knowledge, is the Radiation Safety Officer, Mr.
9 Martin, going out into the field with Mr. Murray and
10 observing him during an actual radiographic operation,
11 utilizing a checksheet which contains requirements, license
12 requirements that Mr. Martin would observe Mr. Murray and
13 check off that he was performing the license conditions
14 correctly.

15 JUDGE COTTER: Do you of any other -- well, let me
16 back up. I know you have problems with your investigations
17 in terms of what is disclosable and not disclosable, but you
18 indicated that there was an allegation. Was the allegation
19 directed at Mr. Murray?

20 WITNESS JOUKOFF: I would have to confer with my
21 counsel before I answered that, if I could.

22 JUDGE COTTER: Please do.

23 WITNESS JOUKOFF: Thank you, Your Honor.

24 JUDGE COTTER: We'll go off the record for a
25 moment and let counsel confer.

1 [Witness and counsel for NRC conferring off the
2 record.]

3 JUDGE COTTER: On the record.

4 WITNESS JOUKOFF: The NRC Region V staff received
5 information from an allegor that Mr. Murray was not
6 conducting radiography in compliance with the conditions of
7 10 CFR and NRC rules and regulations.

8 JUDGE COTTER: Had there been -- let me rephrase
9 that. Was that the first occasion upon which any question
10 of Mr. Murray's conduct of his duties was raised?

11 WITNESS JOUKOFF: I can recall that two NRC
12 investigators assigned to the Region V office came to the
13 Hawaiian Islands in approximately March of 1990, at which
14 time I know they contacted Mr. Murray. Unfortunately, I'm
15 not familiar with what the circumstances were surrounding
16 that, Your Honor.

17 JUDGE COTTER: But so far as you know, there
18 weren't any other questions raised as to his competence.

19 WITNESS JOUKOFF: I don't know the answer to your
20 question. I'm sorry.

21 JUDGE COTTER: If I understand correctly, there
22 were some other investigations going on at the same time and
23 it might well have involved Mr. Murray's other employer.

24 WITNESS JOUKOFF: I beg your pardon? I didn't
25 understand you, Your Honor.

1 JUDGE COTTER: I guess what I'm driving at is that
2 so far as you or Mr. Skov know or the records disclose,
3 there has been no other accusation or allegation of
4 deficiency with respect to Mr. Murray's performance of his
5 duties.

6 WITNESS JOUKOFF: To the best of my knowledge,
7 there has not been.

8 JUDGE COTTER: Mr. Skov, in your professional
9 opinion, how important is the licensee's direction to its
10 employees in the quality of performance in their work?

11 WITNESS SKOV: I'm sorry. I didn't hear the first
12 part of your question.

13 JUDGE COTTER: I said in your professional
14 opinion, how important is the licensee's carrying out of its
15 responsibilities under the license, how important is that to
16 the quality of performance of its employees?

17 WITNESS SKOV: I would consider it to be very
18 important.

19 JUDGE COTTER: Obviously, one of the fundamental
20 issues that we're looking at here is where does the blame
21 lie if, in fact, there is a finding of a failure to follow
22 NRC regulations in the performance of radiographic work. So
23 I'm somewhat concerned that Mr. Murray may be taking a
24 disproportionate share of the blame in the course of the
25 conduct of this licensed work. That's what I'm driving at.

1 WITNESS SKOV: Well, during my inspection, there
2 was no indication from the licensee management that they had
3 ever instructed Mr. Murray not to follow the operating and
4 emergency procedures and the NRC regulations.

5 JUDGE COTTER: I'm sure they didn't tell him to
6 jump off the Pali either, but you've got to give me
7 something a little better than that. Let me ask you this.
8 In your judgment, did the licensee carry out its
9 responsibilities with respect to Mr. Murray in terms of
10 adequately, in terms of training and auditing and
11 monitoring?

12 WITNESS SKOV: As far as I could tell, Your Honor,
13 during the -- as a result of my inspection, I believe that
14 Fewell had carried out their responsibilities with respect
15 to the training of Mr. Murray in the proper conduct of
16 radiographic operations. There was never any hint that
17 Fewell was derelict in their duty as far as instructing Mr.
18 Fewell in the proper way to conduct radiography.

19 JUDGE COTTER: I think you misspoke. You meant
20 Mr. Murray. Instructed Mr. Murray.

21 WITNESS SKOV: Sorry.

22 JUDGE COTTER: Let me go back to some of your
23 specific testimony earlier, Mr. Skov. I think there are a
24 couple of questions on the number 12 in Item 3 of the
25 November 2 letter, the 12 observations. Did you keep any

1 written notes or anything at the time that you were
2 observing Mr. Murray on October 23?

3 WITNESS SKOV: I did not make any notes during the
4 inspection. No, Your Honor.

5 JUDGE COTTER: Where did the number 12 come from?

6 WITNESS SKOV: The number came from an estimate of
7 the number of exposures that he made, which I believed to
8 have been at least 12, but I did not count, actually count
9 the number of exposures that he had made on the 23rd.

10 JUDGE COTTER: I take it when he went out on a
11 particular job that there were not a specific number of
12 welds to be examined in a particular timeframe, is that
13 correct, or is there some record that says on the morning of
14 October 23, I'm going to do X number of welds?

15 WITNESS JOUKOFF: My experience in this, Your
16 Honor, is that there is a report that is completed after
17 radiographic operations are done. This is a report that is
18 not completed for NRC requirements, but it is a report of --
19 an analysis of the radiographs made to the various piping
20 codes. And that report shows the number of exposures that
21 are made on a particular day on a particular job and then
22 tracks to the reading of the radiograph for the acceptance
23 or rejection of the quality of the welding.

24 Those reports we have reviewed in the past and I
25 believe we have one for October 23, 1990, which shows more

1 than 12 exposures being made on that day.

2 JUDGE COTTER: Is that likely where the number 12
3 came from? Are you saying you have an independent
4 recollection?

5 WITNESS SKOV: That's an independent confirmation
6 of my recollection.

7 JUDGE COTTER: During the period that you observed
8 Mr. Murray on October 23 at this site, how long a period was
9 that? How long was he there and was it morning or evening?
10 What time of day was it?

11 WITNESS SKOV: It was in the afternoon, Your
12 Honor.

13 WITNESS JOUKOFF: If I could refer to the writeup
14 that I did on that date, Your Honor, which I believe has
15 been previously submitted to the Board by Mr. Bachmann. It
16 was between approximately 2:45 p.m. and 3:36 p.m. on October
17 23, 1990.

18 JUDGE COTTER: Was Mr. Murray doing radiographic
19 work in the morning?

20 WITNESS JOUKOFF: Of the 23rd?

21 JUDGE COTTER: Yes.

22 WITNESS JOUKOFF: I do not know.

23 JUDGE COTTER: Was he doing radiographic work on
24 the 24th?

25 WITNESS JOUKOFF: I did not question him on what

1 he did on the 24th, Your Honor.

2 JUDGE COTTER: Do either of you know?

3 WITNESS SKOV: I do not know, Your Honor.

4 JUDGE COTTER: One of you responded earlier to a
5 question from Mr. Murray that, if I understood you
6 correctly, the sense of it was that this was the only
7 radiographic work that he did on non-supervised plant
8 grounds during this period, is that correct?

9 WITNESS JOUKOFF: No. My response was in
10 reference to a question from Mr. Murray as to why we picked
11 this location to do the surveillance. The answer was
12 because in my experience out here, because we have attempted
13 surveillances in the past, both myself and other
14 investigators from my office, constitutes a situation where
15 the NRC has direct control to make observations without
16 having to go through company representatives of oil
17 refineries, pipeline projects, or other such personnel,
18 which we feel typically in the past have minimized our
19 ability to observe a radiographer without his knowing that
20 we're present.

21 JUDGE COTTER: With respect to Item 5 of the
22 November order, November 2 order, it charges failure to
23 prevent entry into the restricted area of individuals other
24 than radiographers and radiographers' assistants. Mr. Skov,
25 what do you expect a radiographer to do other than posting

1 the area?

2 WITNESS SKOV: I would expect the radiographer to
3 restrict the access, keep out individuals other than
4 radiographers and assistant radiographers.

5 JUDGE COTTER: I know, but how does he do it?

6 WITNESS SKOV: By warning the individuals not to
7 enter the restricted area before the source is exposed.

8 JUDGE COTTER: Suppose he's in the middle of
9 exposing the source.

10 WITNESS SKOV: If he's in the middle of exposing a
11 source, he would -- the radiographer would have to warn away
12 the individuals to immediately leave the area or, if
13 necessary, retract the source if the individuals did not
14 stop entering the area.

15 JUDGE COTTER: I guess I find this a very fuzzy
16 responsibility to prevent entry into an area. You can put
17 ropes up and you can post areas and that sort of thing.
18 Then you're supposed to do your work.

19 WITNESS SKOV: The posting of the radiation
20 boundary or the restricted area boundary is only meant to
21 warn individuals of the presence of radiography and the
22 presence of radiation. It is not intended to prevent
23 individuals from actually crossing the boundary. The only
24 way that can be done is to have surveillance of the job site
25 and to actively prevent individuals from not only entering

1 the restricted area, but also the high radiation area.

2 JUDGE COTTER: I understand that, Mr. Skov, but my
3 mother always taught me you couldn't do two things at once
4 and do either one of them well. If, in fact, you're looking
5 at a survey instrument, for example, and you're surveying
6 the circumference of the device or the -- sorry, I've
7 forgotten the terminology -- the guide tube or something
8 like that, and somebody comes walking through the area.
9 Then it seems to me that you're placing the kind of
10 obligation on them that requires some sort of rule of
11 reason.

12 So it would seem to me, if I understand correctly,
13 we have something like six people, is it a total of six
14 people who violated that boundary on October 23?

15 WITNESS SKOV: That's correct, Your Honor.

16 JUDGE COTTER: How many of these, in your
17 judgment, did Mr. Murray have a reasonable opportunity to
18 shoo away, if you will?

19 WITNESS SKOV: He had a reasonable opportunity to
20 keep away all of the individuals because he was not doing
21 any surveys. He was not performing any other activity while
22 those individuals had entered the restricted area. So he
23 had every opportunity to prevent those individuals from
24 entering that area.

25 JUDGE COTTER: Of the six, how does it break down?

1 Who were they?

2 WITNESS SKOV: Two of the individuals were Finley
3 Testing Laboratory employees who were working as helpers to
4 Mr. Murray and the other four individuals were unidentified.
5 They were construction workers.

6 JUDGE COTTER: Were they people who simply were
7 passing through on their way to do something else?

8 WITNESS SKOV: Some of the individuals were simply
9 passing through or walking up to the area and looking into
10 the trench or, in the case of two forklift operators, they
11 were actually performing a work activity in that area.

12 WITNESS JOUKOFF: Your Honor, if it please the
13 Court, the citation on the six were only -- we only cited
14 that the source was out at these particular times, not that
15 these people walked through the restricted area boundary
16 with the source in the retracted mode into the camera. And
17 in these instances, the source was out and, in fact, Mr.
18 Skov and I observed Mr. Murray looking directly at the
19 forklift operators and waiting for them to finish loading
20 palates.

21 And then when this went on for a period of ten to
22 15 seconds or 20 seconds, they weren't doing it fast and
23 pulling back out of the restricted area, he actually reached
24 down and cranked the source out knowing that they're there
25 loading palates in the restricted area.

1 So the citation on the six is all for people that
2 were in there with the source out. We're not citing for an
3 area where people just walked through with the source in the
4 camera.

5 JUDGE COTTER: How long were the two forklift
6 operators actually within the boundary?

7 WITNESS JOUKOFF: I would estimate that they were
8 there for approximately a minute total, a minute to a
9 minute-and-a-half.

10 JUDGE COTTER: Each or total?

11 WITNESS JOUKOFF: There were two of them together.
12 The two individuals were together. It was one instance with
13 two individuals together on a forklift.

14 JUDGE COTTER: How about the one other worker?

15 WITNESS JOUKOFF: There was one worker who walked
16 by the open trench on the north side on the dirt road area,
17 and he just walked by with the source exposed. He was
18 walking at a normal pace. I don't know how to quantify what
19 that would be in seconds, but he wasn't running and he was
20 not shuffling. He was walking at a normal pace.

21 One welding inspector came and stood at the edge
22 of the trench for a period of approximately a minute,
23 looking down into the trench while the source was out. And
24 the two Finley employees were inside the restricted area
25 both with the source exposed and the source unexposed during

1 the entire time that we had him under surveillance.

2 JUDGE COTTER: Do either of you -- in your two or
3 three dozen observations, Mr. Skov, have you ever run across
4 comparable situations or activities like that under
5 examination here?

6 WITNESS SKOV: I have observed radiographic
7 activities where radiographers were not performing various -
8 - were not complying with the various requirements, such as
9 locking cameras after each radiographic exposure or not
10 performing a radiation survey, or they would do it
11 improperly, would perform a survey improperly.

12 I believe this is the first instance that I can
13 recall where a radiographer has failed to comply with many
14 different requirements, 10 CFR 34 or license requirements.

15 JUDGE COTTER: Have any of those other
16 radiographers who you've observed failing to meet regulatory
17 requirements, have any of them ever been suspended?

18 WITNESS SKOV: No, sir.

19 WITNESS JOUKOFF: I might have an addition on that
20 same line, Your Honor.

21 JUDGE COTTER: Please.

22 WITNESS JOUKOFF: Thank you. The other
23 surveillance that I did in Hawaii led to a radiographer of
24 another radiographic company here being removed from the NRC
25 license.

1 JUDGE COTTER: Let me go to one other area that
2 you addressed on direct. Again, on the November 2 order, at
3 the bottom of Page 3 and the top of Page 4, I believe your
4 testimony with respect to Mr. Murray's demonstrating to NRC
5 personnel the survey procedures he stated that he had used.
6 That demonstration was not, if I understand correctly, done
7 in support of an affirmative statement. It was simply your
8 observation of how he handled the equipment when you were
9 conducting your own surveys, is that correct?

10 WITNESS JOUKOFF: That is correct, Your Honor.
11 Mr. Murray was first questioned and he responded verbally to
12 what his procedures were.

13 JUDGE COTTER: I understand that, but the handling
14 of the equipment and the following of procedures during that
15 period was not in itself done to deceive him, is that
16 correct?

17 WITNESS JOUKOFF: Absolutely not. He was just
18 asked to put the source out so we could make some radiation
19 measurements.

20 JUDGE COTTER: On that same subject of false
21 information, if I understand correctly, neither of you took
22 notes at the time that you interviewed Mr. Murray on October
23 25 when you came down from taking the video, is that
24 correct?

25 WITNESS JOUKOFF: Yes, Your Honor. I took notes.

1 I have handwritten notes on what he told me at that time.
2 Mr. Skov did the questioning. I wrote it down.

3 JUDGE COTTER: Would you tell me do you have those
4 notes available?

5 WITNESS JOUKOFF: I have them right here, Your
6 Honor.

7 JUDGE COTTER: Would you look at them and tell me
8 what you recorded that you thought was specifically
9 deceitful?

10 [Pause.]

11 WITNESS JOUKOFF: Bear with me a minute. I have
12 to find it amongst all my field notes.

13 [Pause.]

14 WITNESS JOUKOFF: Your Honor, I have before me two
15 different documents. One is a series of handwritten field
16 notes that I made on October 25, 1990 when Mr. Skov --

17 JUDGE COTTER: That's the only one I'm interested
18 in.

19 WITNESS JOUKOFF: That one is very hard to read in
20 scribble.

21 JUDGE COTTER: I'm not interesting in reading it.
22 I'm interested in you telling me what it says.

23 WITNESS JOUKOFF: What it says is, at the top, it
24 says 10/25/90 and then it says "did stop us from entering
25 radiation area upon approach. Tom Murray showed us yellow

1 survey meter, working for FGE, Fewell Geotechnical
2 Engineering, driving Finley's truck today."

3 JUDGE COTTER: I don't want to know all that
4 stuff. All I want to know is what in there specifically
5 refers to something that would support this grounds for the
6 statement in the order that Mr. Murray gave NRC false
7 information concerning his actions.

8 WITNESS JOUKOFF: Mr. Murray was questioned by Mr.
9 Skov regarding the entry of unauthorized individuals into
10 the restricted area, those being non-radiographer or
11 assistant radiographer personnel. And Mr. Murray responded
12 that that had never happened at any time. Mr. Murray was
13 questioned by Mr. Skov regarding his conducting of surveys,
14 of the survey camera between RT exposures, and Mr. Murray
15 stated that he did perform such surveys between exposures.

16 Mr. Murray was asked by Mr. --

17 JUDGE COTTER: It's clear from your recollection
18 that Mr. Murray wasn't talking generally, he was talking
19 about specifically what had taken place within the last 45
20 minutes.

21 WITNESS JOUKOFF: Yes. We were asking him
22 specifically about that day. Do you want me to continue,
23 Your Honor? Murray was asked by Skov to describe how Murray
24 conducts surveys, and Mr. Murray stated that the end of each
25 radiographic exposure, he would crank in the RT source, take

1 a survey meter and look at the meter as he walked up to the
2 RT camera. Murray stated that on this date, on October 25,
3 1990, he was obtaining survey results of three MR per hour
4 near the camera with the RT source retracted into the
5 camera.

6 JUDGE COTTER: Did you take that to be untrue?

7 WITNESS JOUKOFF: I had just watched him not
8 conduct any surveys of the camera at all.

9 JUDGE COTTER: I mean that last part. You said
10 something about him getting a three MR reading.

11 WITNESS JOUKOFF: I found it hard to believe he
12 was getting a three MR reading when I just watched him
13 through the video camera not taking any surveys. But at
14 that point in time, you see, we were in transit for a period
15 of time coming down from the bluff. So it was possible that
16 while Special Agent Lynn Meara was running the camera that
17 he might have made a survey.

18 So I didn't know until that night when I watched
19 the video that no surveys had been made on that date.

20 JUDGE COTTER: How much time is missing from --in
21 the total elapsed time from the time that you started taking
22 the video until you shut the camera off, how much time is
23 missing where -- the camera, I think, was shut off
24 periodically or was not pointing at Mr. Murray at all.

25 WITNESS JOUKOFF: There was only one time that the

1 camera was shut off, and that was during the setup
2 procedure, but before the first shot was cranked out,
3 because it was getting tedious running the film with
4 basically nothing going on.

5 When the first exposure was made, the camera was
6 back on and the camera stayed on continuously until such
7 time that Mr. Skov and I are observed walking on on the
8 video. It was never turned off.

9 JUDGE COTTER: Okay. Is there anything else in
10 your notes? I want you to be looking at your notes now, not
11 at that report.

12 WITNESS JOUKOFF: Yes. In my notes it says that
13 Mr. Murray confirmed for Mr. Skov that he did lock the
14 camera after every radiographic exposure. And Mr. Skov
15 asked Mr. Murray to show him how the radiographic camera is
16 to be locked and Mr. Murray demonstrated for Mr. Skov the
17 locking procedure on how to lock the radiographic camera.

18 JUDGE COTTER: You don't consider that to be a
19 falsehood, do you?

20 WITNESS JOUKOFF: No. It's just an add-on to what
21 I just said about locking the camera. It was demonstrated
22 in the field on that day.

23 JUDGE COTTER: Okay.

24 WITNESS JOUKOFF: I believe that's it, Your Honor.

25 JUDGE COTTER: Thank you.

1 JUDGE LAM: I have questions for Mr. Skov. The
2 Fewell license allows up to 100 curies for the source.
3 During the job situation on October 25 and the subsequent
4 occasion, how much activity was in that source?

5 WITNESS SKOV: The amount of activity, Your Honor,
6 in the source would have been approximately 54 curies of
7 iridium-192.

8 JUDGE LAM: With that amount of activity, what, in
9 your expert opinion, would be the maximum credible dose to
10 the radiographer and to the general public if there were an
11 accident, by which I mean if the source was not fully
12 retracted and the radiographers Victoreen 400 model failed
13 to alarm, if he were to approach the source, exposed source
14 that is, how much dose would he receive?

15 WITNESS SKOV: That's a difficult question to
16 answer because it would depend upon the actions that would
17 be taken by Murray in handling the camera and/or the source
18 directly, unknowingly or not knowing that the source was
19 still exposed.

20 JUDGE COTTER: Worst case scenario.

21 WITNESS SKOV: It's possible that he could -- a
22 radiographer could have received on the order of tens of
23 thousands of rads and received very serious skin burns to
24 his hand if he had manipulated the source or let's say the
25 guide tube, not knowing that the source was still positioned

1 in the guide tube.

2 JUDGE LAM: If you're talking about tens of
3 thousands of rads, would that be life-threatening to the
4 radiographer?

5 WITNESS SKOV: There would also be associated with
6 that a whole body exposure of -- it's hard to say. It
7 depends on how long the individual would be in the area,
8 working in the area exposed to the source. If he were in
9 the area, let's say, for two or three minutes, he could have
10 received certainly tens of rads of whole body exposure.

11 JUDGE LAM: The aim of my question is really to
12 try to assess what is a threat to the radiographer and to
13 the public.

14 WITNESS SKOV: There is a very significant threat
15 to the health of the radiation worker in such cases, and
16 these have been documented in publications. One such
17 publication would be NUREG-BR0024, titled "Working Safely in
18 Gamma Radiography;" a training manual for industrial
19 radiographers which is published by the NRC. It is also
20 enumerated in another NRC publication, NUREG-BR0001 Volume
21 1. That is titled "Case Histories of Radiography Events,"
22 also published by the NRC.

23 Some very, very serious radiation exposures have
24 resulted due to radiography events. Even though the
25 population of radiographers constitutes only a small

1 proportion of radiation workers working with licensed
2 material, they have accounted for over half of the
3 overexposures that have occurred.

4 So there is a very significant threat to the
5 health and safety of radiation workers, radiographers.

6 JUDGE LAM: Mr. Skov, based on your observation on
7 these two occasions, would you categorize Mr. Murray's
8 "deficiency" in his conduct to be more of a threat to
9 himself than the general public?

10 WITNESS SKOV: Yes, Your Honor. I would classify
11 it as more of a threat to -- from what I observed actually
12 taking place on both October 23 and October 25, I would
13 consider that the danger of radiation exposure to Mr. Murray
14 himself to be by far the worst case, even though there were
15 other individuals that had entered the restricted area and
16 potentially could have received in excess of regulatory
17 required exposures. Most definitely the greatest danger was
18 to Mr. Murray himself.

19 JUDGE LAM: Then this leads to my final question.
20 What does the NRC regulation -- the NRC regulation protects
21 both the public and the radiographer. What is the emphasis
22 of the agency's regulation in terms of protecting the
23 radiographer or protecting the public?

24 WITNESS SKOV: The emphasis is in protecting both,
25 Your Honor.

1 JUDGE LAM: Thank you.

2 JUDGE COTTER: We have nothing further. Is there
3 anything further of these witnesses?

4 MR. BACHMANN: Your Honor, I have just one brief
5 question to clarify the record and then I will have nothing
6 further with these witnesses.

7 REDIRECT EXAMINATION

8 BY MR. BACHMANN:

9 Q Mr. Skov or Mr. Joukoff, earlier you were asked by
10 Mr. Murray about his wearing of the survey meter with the
11 alarm on his belt. Do you recall that question?

12 A [Witness Skov.] Yes, I do.

13 Q The discussion centered around October 23, did it
14 not?

15 A [Witness Skov.] That's correct.

16 Q Did he use that meter on the 25th?

17 A [Witness Skov.] That meter was not used on the
18 25th. Mr. Murray had discovered, according to Mr. Murray,
19 that the device was malfunctioning and was, therefore, not
20 used.

21 Q So he had no alarm meter on his person on the
22 25th, is that correct?

23 A [Witness Skov.] Well, on the 25th, he had an
24 alarm -- he had another alarming device which was a pocket
25 dosimeter.

1 Q But it was not in any way a survey meter, was it?

2 A [Witness Skov.] No, it was not.

3 JUDGE COTTER: I'm sorry. It was not in any way
4 what?

5 MR. BACHMANN: A survey meter on the 25th. If
6 there are no further questions, I would ask that the Board
7 excuse the witnesses.

8 JUDGE COTTER: You don't need to ask. We'll
9 decide when we want to do that. Mr. Murray, do you have
10 anything further?

11 MR. MURRAY: No, sir.

12 JUDGE COTTER: While we have these witnesses here,
13 it might be advisable --

14 MR. MURRAY: Excuse me.

15 JUDGE COTTER: You came up with a question?

16 MR. MURRAY: Yes.

17 RE CROSS EXAMINATION

18 BY MR. MURRAY:

19 Q I just want to verify that this was the alarming
20 dosimeter that I was wearing on both those days. I know you
21 came down on the 25th and you checked it and took the serial
22 number, but do you recall this being worn also on the 23rd?

23 A [Witness Skov.] I cannot state categorically that
24 that is what -- that particular dosimeter that you're
25 referring to there was worn on the 23rd.

1 Q This is the audible rate meter, sir. I know we
2 discussed this. The rate meter, you know about the audible
3 rate meter, the new requirements and what this is supposed
4 to --

5 A [Witness Skov.] Yes, I do.

6 Q And the intensity that this is supposed to alarm
7 at.

8 A [Witness Skov.] Are you asking me what radiation
9 level it's supposed to alarm at?

10 Q Yes.

11 A [Witness Skov.] The regulation states 500 MR per
12 hour.

13 Q Then this device here can be tested so you know
14 that it's working, it's operable. You're aware of that.

15 A [Witness Skov.] That's correct.

16 MR. MURRAY: That's all I wanted to ask. Thank
17 you, sir.

18 JUDGE COTTER: Anything further?

19 [No response.]

20 JUDGE COTTER: All right. There were a number of
21 documents that you made available, Mr. Bachmann. If you are
22 not going to offer them, it seems to me that while we have
23 these two witnesses here, it might be advisable to make them
24 Board exhibits.

25 MR. BACHMANN: Do you require additional copies at

1 this time? I've got extra copies of the inspection reports.

2 JUDGE COTTER: I was thinking of the following
3 documents; the October 25 letter, to which there have been
4 some questions. Do you have any extra copies of that? Why
5 don't we go off the record here for a minute.

6 [Discussion off the record.]

7 JUDGE COTTER: On the record. While we were off
8 the record, the following documents were marked as Board's
9 Exhibits 1 through 9.

10 [Board Exhibit Nos. 1 through
11 9, inclusive, were marked for
12 identification.]

13 JUDGE COTTER: Exhibit 1 is the October 25, 1990
14 letter from R.H. Scarano, Director, Division of Radiation
15 Safety and Safeguards to Fewell Geotechnical Engineering,
16 Limited. It attaches an inspection on October 4, 1990
17 report consisting of six pages.

18 Board Exhibit No. 2 is a copy of the transcript of
19 a November 1, 1990 interview of Mr. Murray by Mr. Joukoff
20 and Mr. Skov. Exhibit No. 3 is 17 photographs of events
21 taking place on October 23, 1990, while Mr. Murray was
22 performing his radiographic duties.

23 Exhibit No. 4 is a November 16, 1990 letter to Mr.
24 Fewell from Ross A. Scarano, Director, Division of Radiation
25 Safety and Safeguards, subject NRC inspection report Nos.

1 030-30870/90-01 and 02. It's a two-page letter with a 13-
2 page report of an inspection at Campbell Industrial Park and
3 Fewell Geotechnical Engineering, a special inspection on
4 October 23 and 25-26 and November 1 and 2 and 8, 1990.

5 Exhibit No. 5 is a transcript of an enforcement
6 meeting between Alan D. Johnson, Thomas E. Murray and Philip
7 J. Manly, totalling 63 pages, including the notary public
8 certification. Exhibit No. 6 is a six-page document titled
9 "Results of Field Work," Fewell Geotechnical Engineering,
10 Limited. I'm sorry. It's a three-page document so titled,
11 signed Philip J. Joukoff. It is the results of field work
12 on October 23, 1990.

13 Exhibit No. 7 is a similar document for results of
14 field work on October 25, 1990, totalling three pages and
15 signed by Mr. Joukoff. Exhibit No. 8 is a December 17, 1990
16 letter from Fewell Geotechnical Engineering, Limited to the
17 Regional Administrator for Region V, totalling seven pages,
18 including attachments.

19 Exhibit No. 9 is a February 7, 1991 letter to
20 Fewell Geotechnical Engineering, Limited, titled "Subject of
21 Violation and Proposed Imposition of Civil Penalties-
22 \$20,000," NRC inspection report Nos. 90-01 and 90-02. That
23 is a four-page letter with a seven-page attachment titled
24 "Notice of Violation and Proposed Imposition of Civil
25 Penalty."

1 Is there anything further of these two witnesses?

2 MR. BACHMANN: No, Your Honor.

3 JUDGE COTTER: Thank you very much, gentlemen.

4 You are excused.

5 [Witnesses excused.]

6 JUDGE COTTER: Mr. Bachmann?

7 MR. BACHMANN: Yes, Your Honor. At this time, the
8 staff would proceed on to the third and final part of its
9 direct case. As I mentioned earlier, the first two parts
10 were concerned with the facts, the significance of the
11 facts, and the third part will be the appropriateness of the
12 sanction. I now call as a witness Mr. James Lieberman.

13 Whereupon,

14 JAMES LIEBERMAN,

15 a witness, was called for examination by counsel on behalf
16 of the Nuclear Regulatory Commission, and, having been first
17 duly sworn, was examined and testified as follows:

18 JUDGE COTTER: Please be seated.

19 MR. BACHMANN: I have here a document consisting
20 of two pages. The title of it is James Lieberman. It is
21 Mr. Lieberman's resume. At this time, it is not my
22 intention to offer it into evidence. I would, however, like
23 it to be marked as Staff Exhibit 6 for identification.

24 [Staff Exhibit No. 6 was
25 marked for identification.]

1 JUDGE COTTER: I'm not sure that I completed the
2 loop on the Board's exhibits. I should say that they shall
3 be received in evidence.

4 [Board Exhibit Nos. 1 through
5 9, inclusive, were received
6 into evidence.]

7 DIRECT EXAMINATION

8 BY MR. BACHMANN:

9 Q Mr. Lieberman, would you state for the record your
10 name and your position at the Nuclear Regulatory Commission?

11 A My name is James Lieberman. I'm Director of the
12 NRC Office of Enforcement.

13 Q Mr. Lieberman, in your position as Director of the
14 Office of Enforcement, can you tell the Board generally, but
15 briefly, what your duties entail?

16 A As a Director of Enforcement, I'm responsible for
17 managing and implementing the Commission's enforcement
18 program and primarily managing and implementing the
19 escalated enforcement activities of the Commission. That's
20 the civil penalties and orders that the Commission issues.

21 Q Mr. Lieberman, would it be correct to say that the
22 sanction imposed in the Fewell case; that is, the suspension
23 of Mr. Murray from the Fewell license for three years; was
24 essentially your decision?

25 A That is correct. Well, Mr. Thompson, the Deputy

1 Executive Director for Nuclear Materials Safety, Safeguards
2 and Operations Support, issued the order. It was my
3 responsibility to develop the order in coordination with
4 Region V, the Office of Nuclear Materials Safety and
5 Safeguards, and the Office of General Counsel, to put this
6 recommendation together, and I provided it to Mr. Thompson.
7 He adopted it on my recommendation.

8 Q Mr. Lieberman, would you explain to the Board how
9 you formed your recommendation to Mr. Thompson; that is, the
10 three-year suspension of Mr. Murray?

11 A Let me first start by referring to Section 3 of
12 the order. Section 3 of the order describes our views that
13 the violations and the actions committed by Mr. Murray were
14 willful. By willful, let me explain. Mr. Murray was
15 clearly an experienced radiographer. He had been trained in
16 order to become a radiographer. Under a license of the
17 Commission, you have to be trained and tested, and he did
18 that.

19 He has a full understanding of how to perform
20 radiography. October 4, during inspection, he explained to
21 the NRC inspectors how to perform radiography and what the
22 procedures are in performing radiography, and he did that
23 properly. Again, on October 25, following the observations
24 by Mr. Skov and Mr. Joukoff, he again explained how to do
25 radiography and demonstrated how to do radiography and

1 explained what he did on that particular day, and the
2 explanation he provided was a proper explanation on how to
3 do radiography.

4 Again, on November 1, when he was interviewed
5 under oath by Mr. Joukoff and Mr. Skov, he again explained
6 in detail on how to do radiography. Clearly, he understands
7 how to do radiography. However, repeatedly on October 23
8 and October 25, he failed to perform a number of
9 requirements in the performance of radiography, especially
10 in the surveying of the guide tube and the camera, which is,
11 in my point of view, the most significant violation of the
12 ones we've discussed today, because the only way to assure
13 that you know where the source is is by doing a survey.

14 The Commission recently, in promulgating new
15 regulations for radiography that took effect January 10,
16 1991, indicated that in radiography, where only four percent
17 of the radiation workers are radiographers, that they
18 account for 18 percent of the exposures in both NRC
19 jurisdiction and agreement states.

20 In fact, they indicated that in the time period
21 between 19 -- I guess the decade ending in 1984, that more
22 than one-half of the overexposures greater than five rems to
23 the whole body or 75 rems to the extremities, and almost 60
24 percent of the overexposures greater than 25 rems to the
25 whole body and 375 rems to the extremities are accounted for

1 from radiography.

2 In fact, they point out that more than 25 percent
3 of all overexposures within NRC jurisdiction is accounted
4 for through radiography. What I'm reading from is a
5 statement of consideration for the rule, it changes the Part
6 34 that appeared in the Federal Register on January 10,
7 1990.

8 This Federal Register Notice also described a
9 number of incidents involving radiography, and the
10 Commission noted that all of these conditions, these are
11 conditions of all the overexposures, could be recognized by
12 performing a radiation survey after each radiographic
13 exposure, to verify that the source is properly returned to
14 its shielded position.

15 In my way of thinking, when you're performing
16 radiography and you fail to do a survey of the guide tube
17 and camera, I equate, and this may be over-simplification,
18 but I equate to driving down a highway, a superhighway,
19 going in the wrong direction on a moonless night going 60
20 miles an hour, you're flying blind. You can't smell it, you
21 can't hear it, you can't feel it.

22 The only way to know for sure that you know where
23 the source is is by doing a survey. In the past year, we
24 had a situation where a radiographer failed to do a survey,
25 didn't appreciate that the source was disconnected in the

1 guide tube. He carried the guide tube around his neck and
2 as he was carrying it, the source fell out of the guide
3 tube.

4 That person received approximately 6,000 rems to
5 the back of his neck. That could have been prevented by
6 doing an appropriate survey. And there are countless other
7 cases where radiographers have been overexposed because they
8 failed to make a survey.

9 So we consider this very significant. So going
10 back to this order, the man understands what the
11 requirements are, he repeatedly violated them. When you
12 look at the tape, his actions were deliberate and careful.
13 There doesn't appear to be any hurrying. He knew what he
14 was doing and he didn't do it right.

15 We can only conclude that these weren't
16 inadvertent actions, but these were willful actions. In
17 addition, when he explained what he did on that day to Mr.
18 Joukoff and Mr. Skov, he didn't describe what he actually
19 do. He provided erroneous information. We can only
20 conclude that he provided false information. He did that
21 again on November 1 when he was under oath.

22 This leads, to us, to be a simple question of lack
23 of integrity. Integrity is very important for radiography.
24 Our inspection program is an audit type program. We inspect
25 radiographers approximately once a year, absent allegations.

1 When we do inspect radiographers, it is often difficult to
2 do an inspection of the actual radiography. Much of our
3 inspections are records which really don't reflect how
4 radiographers actually do the job.

5 We've tried recent'y to do more unobserved
6 radiography because most radiographers are trained and
7 knowledgeable and they know NRC is present, they're going to
8 do it right. What we need to find out is how radiographers
9 do it when they're not being observed. In this case, we
10 observed Mr. Murray when he didn't appreciate he was being
11 observed, and clearly he didn't follow the requirements.

12 Since we only do an audit type inspection program,
13 we're depending on the training, on management oversight and
14 integrity. Of those three factors, integrity is most
15 important because most radiographers or all radiographers
16 are well-trained. Management oversight is certainly
17 important, as Mr. Skov pointed out this morning or earlier
18 this afternoon, but management can't be there all the time.
19 If the radiographer knows management is present, the
20 radiographer tends to do it properly.

21 The question is how does the radiographer do the
22 job when he's not present. In this case, he demonstrated
23 that he doesn't do it properly and he lied about it. He
24 gave us erroneous information. That caused us to lose our
25 confidence in Mr. Murray doing radiography properly when

1 he's not being supervised.

2 That loss of confidence we call reasonable
3 assurance that activities would properly be conducted. So
4 in this case, we lost our reasonable assurance that Mr.
5 Murray would properly do his job when he wasn't being
6 supervised. As a result of that conclusion, the staff, in
7 our view, had no other choice but to remove Mr. Murray from
8 licensed activities.

9 The order that we issued has three basic parts to
10 it. First, it provides for removal of Mr. Murray from
11 licensed activities. Second, it provides that the Regional
12 Administrator may relax that order for good cause shown.
13 Third, it provides that the order expires in three years.

14 We picked three years because we wanted to have a
15 clear sanction so that if Mr. Murray resumed operation as a
16 radiographer, he will have a long enough period to clearly
17 emphasize to him the importance of doing it right. So we'd
18 appreciate that if he did resume radiography after three
19 years and if he again violated Commission requirements, he
20 would recognize that the sanction would be much longer.

21 Second, it would give clear notice to other
22 licensees of the importance of doing radiography properly
23 and being candid with the Commission. The third factor in
24 the selection of the three-year period was that -- let me
25 step back.

1 Prior to the last year or so, we did not provide a
2 period of years when we suspended a person from licensed
3 activities. It was basically open-ended and the order
4 provided the ability to relax it by the Regional
5 Administrator for good cause shown.

6 As a result of working on the wrongdoer
7 rulemaking, which is a rulemaking to give the Commission the
8 authority to implement, statutory authority to issue orders
9 to non-licensees, it was thought appropriate to provide a
10 term of years so that people wouldn't perceive these orders
11 as lasting for life, because few things last forever. So
12 say the last six months or so when we've been issuing
13 orders, we've been putting, in many cases, a term of years.

14 In this case, when we considered the term of years
15 to be applied, we recognized that Mr. Murray, as an employee
16 of the Finley Testing Laboratories, and in that case we had
17 revoked the license, Mr. Finley and the corporation
18 requested a hearing. That case was settled with a three-
19 year prohibition in that he couldn't apply for a license for
20 three years or be involved in licensed activities for three
21 years.

22 We thought that if the employer had a three-year
23 prohibition, it would be appropriate that Mr. Murray would
24 not have a longer period than three years, and any time
25 period less than three years we did not deem an appropriate

1 sanction given the significance of these violations.

2 To my knowledge, I've been involved in almost
3 every enforcement action that the Commission has taken,
4 escalated enforcement action the Commission has taken since
5 1977. We have never had a situation where a radiographer
6 has repeatedly failed to do surveys as was demonstrated in
7 this case. So we thought an extremely strong sanction was
8 appropriate to get the message out. We think that nothing
9 less would be appropriate by the public health and safety.

10 MR. BACHMANN: Your Honor, I believe Mr. Lieberman
11 has covered all of the items that he wished to cover. At
12 this point, I would have him available for cross
13 examination.

14 JUDGE COTTER: Mr. Murray, do you have any
15 questions for Mr. Lieberman?

16 CROSS EXAMINATION

17 BY MR. MURRAY:

18 Q Mr. Lieberman, along with myself, how many other
19 radiographers have been given this punishment?

20 A In the past year, we've removed five radiographers
21 from licensed activities.

22 Q For three years.

23 A In one case, it was one year. In the other three
24 cases, it was an indefinite time period.

25 Q Indefinite time period. Okay. How long has the

1 NRC done unannounced auditing on radiographers?

2 A Not for that long. We decided that we needed to
3 emphasize doing unannounced in inspections for the reasons I
4 said earlier, because the only way to really determine how
5 radiographers are doing the job is to be able to observe
6 them when they don't recognize they're being observed.

7 Q How would I, you or the public benefit by
8 suspending me for three years from radiography?

9 A I think the public would be -- when I use the term
10 public, I include the worker as part of the public.
11 Radiography is where real people get overexposed. The job
12 of the Commission is to prevent overexposures to members of
13 the public, including radiation workers. Giving this
14 sanction, which we intend to distribute as part of the NMSS
15 newsletter and letters to radiographers to emphasize the
16 importance of doing radiography properly, that if people
17 appreciate that they may lose their ability to perform their
18 livelihood, that maybe that will give greater emphasis to
19 doing the job right and doing the surveys to avoid
20 unnecessary overexposures.

21 Q So suspending me for three years is -- you say I'm
22 supposed to get a message from this, being taken away from
23 the field for three years, I'm going to learn something from
24 this as opposed to what I'm going through right now, I
25 haven't learned anything. Is that what you're saying?

1 A No. I'm not saying you haven't learned anything
2 to date, but I think after three years the message would be
3 reenforced that much more.

4 Q So during three years, what am I supposed to do
5 for three years that's going to improve my integrity or my
6 performance of radiography, which is the only thing that I
7 do know? There is no alternative. There is just this
8 three-year suspension. There is no way that someone could
9 come in and -- with the NRC, prove to them or try to --
10 what's the word I'm looking for -- try to get back into the
11 good graces of the NRC. There is no other way.

12 A In our view, not without a significant time
13 period. The order provides that the order may be relaxed
14 for good cause shown and there may well be a proposal that
15 could be made that might be less than three years, as we
16 stated to Mr. Fewell in response to his request that we
17 would consider additional proposals.

18 But we thought any proposal required a significant
19 sanction because we feel we need to get the message out. In
20 your own case, we believe you clearly knew what you had to
21 do, you knew why you had to do it, you chose not to do it.
22 I'm sure you believe and you're going to tell us that you
23 intend to do it right now.

24 In almost every case when we've had an
25 overexposure, the person has told us this is the first time

1 I've ever had a failure to survey. We've had no way to
2 disprove that. In your case, we see the situation where on
3 a number of occasions you failed to do a survey. I would
4 like to believe you and I'm sure you're very sincere.

5 But as I said earlier, radiography is where people
6 get overexposed and they only get overexposed for one
7 reason, not doing a survey. So we believe it's appropriate
8 that a substantial time period will provide the emphasis to
9 you that should you resume radiography, and you might not,
10 but if you do, you will certainly appreciate how important
11 it is to do it right, and hopefully other licensees and
12 radiographers will obtain the same message from this action.

13 Q Now, opposed to this order, if I was to offer, my
14 employer was to offer -- and I'll give you a hypothetical
15 situation. Let's say I was to continue to do radiography
16 from this day forward. If I was to notify the Region
17 Director or the NRC of this region every day by phone or by
18 fax where I was to be on each and every day and answer to
19 them each and every day, don't you believe that that's
20 better than taking me out of the field?

21 What I'm trying to get at is wouldn't it be better
22 to take me, and I do know -- you're right, I do know what
23 I'm doing and I know a lot about the NRC and I've done
24 radiography for ten years, not in the field, but in the
25 military. But I don't see the advantage of taking somewhat

1 out for three years as opposed to trying to help this person
2 to better himself and to acquire the responsibility, and
3 understand that I am responsible to you, that you don't have
4 the people to look over me.

5 Now, wouldn't it be better if I could do that,
6 that you could come out and audit me at any time and that I
7 would let you know where I am each and every day?

8 A From a safety point of view, one could say the
9 cleanest way to protect the public health and safety is not
10 to have you perform radiography, because clearly then you're
11 not creating a potential hazard to either yourself or to
12 others. As to your proposal about giving us notice,
13 frankly, we don't have the resources to inspect you every
14 day.

15 However, that proposal, together with some
16 sanction, together with greater management oversight could
17 well be a framework to relax this order. But that is a
18 decision that the Regional Administrator has to make
19 initially and then in consultation with the Program Office,
20 NMSS, and my office, and my supervisor, Mr. Thompson, will
21 consider whether that's appropriate.

22 We haven't yet received the proposal that's
23 adequate. The previous proposal, we concluded, was not
24 adequate.

25 Q I get the impression that when you say it's better

1 for the public that I'm not doing it all and yet the order
2 kind of falls in between. Either I'm not trust -- and in
3 your eyes, I shouldn't be doing this at all, or I should be
4 taken and put in a probationary situation where I can be
5 either trained or made into a better radiographer, a more
6 responsible radiographer.

7 The order, to me, is in between. It doesn't -- do
8 you see what I'm saying? It falls short of that. You're
9 saying I'm unsafe, but in three years I can go back to it.
10 In three years, I'll forget everything I learned up to this
11 point.

12 A I presume before you resume operation in three
13 years, you'd be retested to assure that you are still
14 competent and knowledgeable of requirements.

15 Q I think the important thing here is that I
16 understand what my responsibility is to the NRC and to the
17 public safety. That's what I see. And I don't see how a
18 three-year --

19 JUDGE COTTER: Mr. Murray, don't testify now.
20 You'll get a chance later.

21 MR. MURRAY: Thanks, again.

22 BY MR. MURRAY:

23 Q There was one more question. The order itself. I
24 think I asked Mr. Sachmann over the phone during the
25 conference, does this pertain to just Dick Fewell -- if I'm

1 to go somewhere else, what is the situation going to be if I
2 apply to another license, what is going to be the response
3 of the NRC when I apply to someone else's license.

4 A The order itself is directed at only to the Fewell
5 license 030-30870. The Commission this time has not
6 implemented statutory authority to be able to issue orders
7 to the individual. So you are not under any prohibition
8 from being involved in any other licensee's activities and
9 you're not obligated to tell us if you are involved in any
10 other licensed activities, except for those radiography
11 licenses that require named radiographers on the license.

12 For those other licenses, should we determine that
13 you are involved in licensed activities, we'd have to make a
14 decision at that time, considering the length of time that
15 has passed, the oversight provided, the quality of the
16 company, and whatever other changed circumstances might be,
17 and decide whether we need to take some action.

18 If we did, then we would have to issue another
19 order at that time.

20 Q So I see there's only really two I can work on
21 this island. If I was to go to, let's say, Walashek, they
22 name their radiographers, and it's going to come to the
23 Regional Director, the office at Walnut Creek. Again, what
24 is going to be your position and am I going to be able to do
25 radiography for them?

1 A We haven't considered that question, but I would
2 presume that if it's in the near term, the answer would
3 probably be no.

4 JUDGE COTTER: I'm sorry. The answer would
5 probably be what?

6 THE WITNESS: It would probably be no if it's in
7 the near term.

8 MR. MURRAY: That's all, Mr. Lieberman. Thank
9 you.

10 JUDGE FOSTER: Mr. Lieberman, your order goes
11 directly to a determination of loss of assurance in Mr.
12 Murray's performance. It doesn't provide any information on
13 what level of severity you considered his actions to be, as
14 normally included in Appendix C. I wonder if you could
15 elaborate on the thoughts and evaluations that went into the
16 classification of degree of severity of Mr. Murray's actions
17 here.

18 THE WITNESS: If I could see the proposed civil
19 penalty.

20 [Witness reviewing document.]

21 THE WITNESS: When we issue an order, we don't
22 normally provide severity levels for the violations. This
23 order was issued because of a safety reason, because we
24 didn't have confidence that the Fewell Corporation would
25 comply with requirements with Mr. Murray present.

1 In the proposed civil penalty that we issued
2 February 7, we go over the individual violations which are
3 chargeable to the corporation because they're responsible
4 for the activities of their employees. And as to the false
5 information provided to Mr. Joukoff and Mr. Skov on October
6 25 and November 1, we provided that as a Severity Level 2.
7 We considered making that Severity Level 1, but recognizing
8 that Mr. Murray is not a supervisor or manager, we concluded
9 that Severity Level 2 would be the more appropriate
10 sanction.

11 In the case of the surveys and the other matters,
12 we also combined those into a composite Severity Level 2 for
13 the same reason.

14 JUDGE FOSTER: So you did go through a
15 consideration of the Appendix C levels in considering what
16 kind of sanctions should be directed against Mr. Murray, is
17 that correct?

18 THE WITNESS: No. Against Fewell we did that. We
19 did not consider the severity levels at the time we issued
20 the order to Mr. Murray, because the order, again, was based
21 on lack of reasonable assurance. And whenever we have a
22 situation where we don't have reasonable assurance that
23 licensed activities will be properly conducted in accordance
24 with Commission requirements, our response is issuing an
25 order.

1 If it's a management problem, under those
2 circumstances, we suspend the license. If it's an
3 individual problem, as in this case, we view this as an
4 individual problem, we would issue an order to remove the
5 individual.

6 JUDGE FOSTER: But I'm sure this wasn't an
7 arbitrary decision on your part relative to a finding of
8 lack of assurance. You must have gone through some sort of
9 a process to come up with that conclusion. Is that entirely
10 a mental consideration as contrasted with reference to the
11 Appendix C sanctions?

12 THE WITNESS: Well, it was certainly a very
13 serious decision that we gave careful thought. We certainly
14 don't take a matter like this very lightly. Under the
15 enforcement policy, willfulness is a basis for issuing an
16 order. There's a section in the enforcement policy on when
17 we issue orders. There's a section about issuing orders to
18 licensees involving individuals.

19 If I could refer to the enforcement policy?

20 [Witness reviewing document.]

21 JUDGE COTTER: Page 167.

22 THE WITNESS: I'm looking at Section E there. It
23 talks about willful violations, serious violations and
24 compares inadvertant situations with willful violations.
25 Clearly, we think this is a willful violation. It refers to

1 issues of integrity. It says, "In addition, NRC may take
2 enforcement action where the conduct of an individual places
3 in question the NRC's reasonable assurance that licensed
4 activities will be properly conducted." The section on when
5 we issue orders, that's Section C.

6 One provision when we issue orders is to remove a
7 threat to the public health and safety, and that's what we
8 viewed of Mr. Murray's actions, once we lost confidence that
9 he would be doing surveys routinely. We clearly think that
10 under Section 186, we would not have issued a license to
11 this corporation if we knew its employees or an employee of
12 the licensee would willfully violate Commission requirements
13 and provide us erroneous information.

14 If we have the authority to revoke a license, we
15 think we have the authority to do less, and that is to
16 modify a license to remove the individual; no different than
17 if we were to remove a -- require a licensee to remove a
18 piece of equipment which we thought would not give us
19 reasonable assurance, because licensees, in the end
20 analysis, work through people.

21 And the people, the person, the human factor, in
22 the end analysis, was important to make sure licensees
23 complied with Commission requirements. Unfortunately, Mr.
24 Murray did not demonstrate that he was prepared to do this.

25 JUDGE FOSTER: If I look at Part 2, Appendix C,

1 under Supplement 4, this is in the 1990 version on Page 175,
2 under Severity Level 3, a number of items. One of those
3 items is No. 12. It says breakdown in the radiation safety
4 program involving a number of violations that are related
5 or, if isolated, that are reoccurring, that collectively
6 represent a potential significant lack of attention or
7 carelessness toward the license responsibilities.

8 Do you think that characterizes Mr. Murray's
9 actions in this case?

10 THE WITNESS: Certainly it does, but when I read
11 the enforcement policy, I read from the top down. What I
12 mean by that is I consider the higher severity levels and
13 then I reach down to the lower severity levels. That
14 example is primarily used when we have a bunch of Severity
15 Level 4 and 5 violations that individually may not be that
16 significant, but together they become more significant.

17 If you take a look, for example, C-4, substantial
18 potential for a overexposure, whether or not such exposure
19 or release occurs. They talk about in the vicinity of
20 exposed radiographic sources without having performed an
21 adequate survey. When it says an exposed radiographic
22 source, you never really know until it happens.

23 And we don't think that you need to have an
24 overexposure before you have a significant problem. In the
25 recent additions to the enforcement policy that was

1 published on January 10, 1990, the Commission clarified the
2 enforcement policy and modified it in the area of surveys.

3 The Commission said -- the Commission is modifying
4 its general statement of policy and procedure to reflect the
5 Commission's amendment of 10 CFR Part 34. The modification
6 of the enforcement policy is being made at this time to
7 Supplement 6, fuel cycle and materials operations, to put
8 licensees on notice that the failure to implement the
9 requirements for dosimetry and equipment by the acquire
10 date, and the equipment has to do with survey instruments,
11 may be considered a violation of significant regulatory
12 concern.

13 The example for Severity Level 3 is significant
14 because it represents failures associated with the use of
15 equipment and dosimetry designed to minimize overexposures
16 from radioactive materials. When you look at Section, I
17 believe, 3, on Page 162 of the CFR referring to severity of
18 violations, there's a description of how to deal with
19 violations involving a willfulness.

20 You consider the position of the individual. You
21 consider the potential hazards, the significant violations.
22 And since these violations, we conclude, are willful, the
23 severity level would be greater than just if there was one
24 case of a failure to survey. If it was a case of just a
25 failure to do a survey, that would be a civil penalty

1 situation.

2 If there was a failure to do a survey and the
3 radiographer admitted that he failed to do that survey,
4 again, that would probably be a civil penalty case. But in
5 this case, we don't have that. In this case, we have
6 repeated failures to do a survey on different days, and then
7 we have the statements that ask particularly how did you do
8 the job, and false information was provided.

9 Mr. Murray was deceitful to us and we have to
10 depend on licensees doing the job properly. Just a month or
11 so ago, we had a case of a licensee, I believe the name is
12 Westress, where the radiographer failed to wear a film badge
13 and he called us up to tell us that he was in a situation
14 where he had a source disconnect and, as I say, he told us
15 he wasn't wearing a film badge.

16 We inquired why he wasn't wearing a film badge and
17 he said I don't know, I just don't understand why I wasn't
18 wearing the film badge. We did an investigation of this
19 case and finally, after the investigation, he stated to the
20 investigator when he was under oath that he took the film
21 badge off only for one reason, to avoid an overexposure.

22 In that case, we removed the radiographer only for
23 one year. The difference between that case and here is that
24 he admitted to us that he didn't wear a film badge. The
25 only thing he didn't tell us was the reason. The reason, to

1 some degree, was pretty obvious. The significant
2 information he gave us.

3 So essentially while he wasn't completely candid,
4 he told us the important stuff. So one year we thought was
5 an appropriate sanction. But we have to have integrity in
6 licensees' employees. Because we have this audit type
7 program, we're depending on licensees to do the job right.
8 When we're not there, that's the -- it's only the integrity
9 and training of the employees that we can depend upon.

10 Mr. Murray has the training, but, unfortunately,
11 we concluded he doesn't have the integrity based on his own
12 actions.

13 JUDGE FOSTER: That's all I have.

14 JUDGE LAM: Mr. Lieberman, I understand there was
15 an enforcement meeting between the Region V Regional
16 Administrator, Mr. Scarano, and Mr. Murray on December 5.
17 There's a copy of the transcript the Board has. In that
18 meeting, I understand Mr. Murray proposed a relaxation of
19 the order, together with a letter from Fewell Engineering,
20 proposing putting Mr. Murray under supervision.

21 I gather that that proposal was not accepted.
22 Would you clarify on what basis that proposal wasn't
23 accepted?

24 THE WITNESS: Yes, I will. In fact, that meeting
25 was performed at my request. We responded to the Fewell

1 Corporation in a letter -- do you have that, Mr. Bachmann?

2 MR. BACHMANN: This is --

3 THE WITNESS: Mr. Scarano's letter, I believe.

4 MR. BACHMANN: It's a Board exhibit.

5 THE WITNESS: But in any event, the proposal of
6 the Fewell Corporation was to increase the supervision of
7 Mr. Murray beginning almost constant supervision and then,
8 over time, a more relaxed supervision, did not provide for a
9 continuation of the suspension.

10 [Telephone interruption.]

11 JUDGE COTTER: We'll go off the record for a
12 moment.

13 [Discussion off the record.]

14 THE WITNESS: Our concern was that while
15 additional supervision may clearly be appropriate, the
16 question is when they don't have the supervision, how will
17 Mr. Murray perform. Again, this question of Mr. Murray not
18 knowing how to do it, he clearly knows how to do it. The
19 question is can we depend on him doing it when someone is
20 not around.

21 So we really think that more than just additional
22 supervision is required, especially if he knows he's being
23 supervised. We really think some period of time is
24 appropriate to reenforce the sanction.

25 JUDGE LAM: This leads to my next question. In

1 your earlier testimony, you mentioned that perhaps a
2 combination of different elements would constitute an
3 acceptable basis for relaxation of the order. What are
4 these elements, in your mind?

5 THE WITNESS: Of my mind, a period of suspension
6 or probably at least a year. After that point in time, I
7 would think Mr. Murray should work as an assistant
8 radiographer under constant supervision for some period of
9 time, and, thereafter, assuming he's properly performing
10 activities and being supervised by a qualified radiographer,
11 then some audits, some time period in a probationary period.

12 I do have to indicate that it's not my decision
13 alone as to what the sanction should be and how it should be
14 relaxed. There's a number of individuals that would have to
15 be involved in that decision from the staff point of view in
16 relaxing the order.

17 JUDGE COTTER: Mr. Lieberman, you say that the
18 Commission did not authorize you to issue orders to
19 individuals. Why is that?

20 THE WITNESS: The Commission's regulations in Part
21 2, 2.202 to 2.204, refer to issuing orders to licensees and
22 not to individuals. So we have a proposed rulemaking.
23 We've published the proposed rule --

24 JUDGE COTTER: That wasn't my question. I know
25 what it says, but why?

1 THE WITNESS: Because in the past the Commission
2 hasn't done that.

3 JUDGE COTTER: Why?

4 THE WITNESS: Well, in all honesty, Your Honor, I
5 can't tell you why in Section 1952 we adopted the
6 regulations, because 2.202 and 2.204 essentially go back to
7 that time period, on why the Commission has always in the
8 past focused on the licensees.

9 I believe 1978 was the first case where we issued
10 an order. It was to Nine Mile Point where we issued an
11 order to remove the plant manager because of providing false
12 information to NRC. That was the first time the staff had
13 issued an order to a licensee to remove an individual
14 person. Since that time, we've issued numerous orders, such
15 as the order here, to licensees to remove individuals.

16 JUDGE COTTER: Let's take the plant manager
17 situation that you indicate was the first one. Would you
18 call that a Severity Level 1 or Severity Level 2?

19 THE WITNESS: Severity Levels 1 and 2 both have
20 the same definition, very significant violations. The plant
21 manager probably, I concluded, would be a Severity Level 1.

22 JUDGE COTTER: Pardon me?

23 THE WITNESS: I would conclude a Severity Level 1,
24 the plant manager. The severity level is a concept
25 developed in the enforcement policy to really assist us in

1 applying the Commission's civil penalty process, because we
2 do have the authority to issue civil penalties up to
3 \$100,000 per day.

4 We have thousands of requirements. We try to
5 break them up into those matters which the regions can
6 handle, Severity Levels 4 and 5, and those matters which
7 require approval of Headquarters, Severity Levels 1, 2 and
8 3, Severity Level 1 the Commission needs to approve.

9 In giving a severity level, it helps us to
10 determine the civil penalties in the enforcement process.

11 JUDGE COTTER: I'm having real conceptual
12 difficulty with equating the specific violations mentioned
13 here on two days with a nuclear power plant manager
14 furnishing false information to the Commission. It seems to
15 me that you're not talking about the same level of either
16 threat to the public health and safety or the same level of
17 severity.

18 THE WITNESS: I referred to the plant manager only
19 because that was the first time that we had issued an order.

20 JUDGE COTTER: I'm just using it as an example,
21 Mr. Lieberman. The point is that I can't find anything in
22 these severity levels and, as you point out, they were the
23 severity levels and the concept of the appendix was directed
24 towards nuclear power plants, I believe.

25 THE WITNESS: Well, except --

1 JUDGE COTTER: There is only passing reference to
2 other areas. But to conclude that the work of a
3 radiographer, and particularly the deficiencies involved
4 here are Severity Level 1, 2 or 3, in comparison to the
5 threat to the public health and safety presented by a
6 nuclear power plant misadministration or willful breaking of
7 the regulations, I find conceptually very difficult.

8 THE WITNESS: Let me respond. Some of the
9 supplement -- only Supplements 1 and 2 directly pertain to
10 power reactors. Supplement 4 is health physics, Page 174.
11 Supplement 6 is fuel cycle operations. Supplement 7, called
12 Miscellaneous Matters, involves inaccurate information.

13 Clearly, the Commission considers willful
14 violations to be significant matters, erroneous information
15 to be significant matters, overexposures committed by any
16 licensee is a significant matter, as I've tried to
17 demonstrate and Mr. Skov also demonstrated.

18 JUDGE COTTER: There are no overexposures here,
19 though, is that correct?

20 THE WITNESS: That's right, but the problem with
21 radiography, one could say, is once the equipment fails --

22 JUDGE COTTER: I understand risk.

23 THE WITNESS: And in each of the cases where we've
24 had an overexposure, it's because of failure to do a survey.
25 Clearly, if a failure to do a survey is a Severity Level 3,

1 a willful failure to do a survey is a Severity Level 2 by
2 the enforcement policy, and in Table 2 on Page 167 of the
3 policy, it gives some examples as to what actions might be
4 taken.

5 JUDGE COTTER: Let's go back. You said that
6 failure to do a survey is a Severity Level 3. What is the
7 basis for that?

8 THE WITNESS: Well, the Commission's changes in
9 the enforcement policy dated January 31, 1990 --

10 JUDGE COTTER: Which says what?

11 THE WITNESS: Says that the example -- the
12 statement of consideration provides that we are making
13 changes to examples. An example of Severity Level 3 is
14 significant, and what that example is is failure to use a
15 radiographic survey device, failure to do a survey in
16 performing radiography, because it presents failures
17 associated with the use of equipment designed to minimize
18 overexposures. That's one milestone to consider.

19 Another milestone to consider is Item C-4, the
20 substantial potential for exposure, failure to do surveys
21 there. That's another potential consideration. In Item C-
22 12, the breakdown in the program involving repetitive
23 violations could be another basis to make it a three.

24 Then the erroneous information, a willful failure
25 to provide information.

1 JUDGE COTTER: Let's take that one for a while.
2 You've said in your testimony that Mr. Mur--v willfully
3 failed or provided false information during a November 1
4 interview. I don't find that in there. I find a
5 considerable -- a very muddy exchange of information between
6 the people involved. Where do you find that?

7 THE WITNESS: Well, my reading of the November 1
8 interview was he was questioned as to how he performed
9 radiography on the 23rd and 25th. He described how he did
10 it and what he described, how he did it on those days was
11 not what he did. He described how he surveyed the guide
12 tube, how he locked it at the end of each exposure.

13 JUDGE COTTER: I don't think that's what it said,
14 but I guess we'll have to read it. you're reading it and
15 getting one interpretation; I'm reading it and getting
16 another.

17 THE WITNESS: I would say the document speaks for
18 itself. Can I attempt to show you --

19 JUDGE COTTER: Sure.

20 THE WITNESS: It'll take a minute. Can we go off
21 the record for a minute?

22 JUDGE COTTER: Yes. We'll go off the record.

23 [Discussion off the record.]

24 JUDGE COTTER: Back on the record.

25 THE WITNESS: Before we broke, I was looking to

1 find where in the November 1 transcript there are references
2 to where he might have provided false information. On Page
3 52, Mr. Murray was asked by Mr. Skov, on Thursday, which is
4 October 25, then what we're looking at here is a description
5 of what he did on that day.

6 And then when you went up to the exposure device,
7 you surveyed the camera. Did you also survey between
8 exposures the guide tube. Answer, yes. So here's a
9 statement that he said how he did it and, in fact, he did
10 not survey the guide tube.

11 Page 87 is referring to a discussion of locking
12 the camera. The question, and you did that between
13 exposures. Yes; well, except when you guys showed up. I
14 cranked it in and came over. And then I ran down and locked
15 it up. So again he's saying that he locked up the camera,
16 which he didn't do. So those are two examples --

17 JUDGE COTTER: I find this transcript full of sort
18 of backtracking and misunderstanding and that sort of stuff.
19 You picked those two out and I'll bet you there are at least
20 four or five other instances in here where he says no, I
21 didn't lock it and you caught me and, no, I didn't do this
22 and you caught me. So you're being very selective about
23 that, Mr. Lieberman.

24 THE WITNESS: I guess I should add that when I
25 make my decisions on these enforcement actions, I rely to a

1 large part on information I get from inspectors and
2 investigators. They were there on October 25. We've heard
3 testimony earlier today on what they asked and that Mr.
4 Murray demonstrated and explained what he was doing and
5 their explanations --

6 JUDGE COTTER: I understand, Mr. Lieberman.
7 Number one, this is judgmental and I certainly don't for a
8 second question that you have exercised your best judgment
9 as you best see it. But because it is judgmental, that
10 makes it a subjective area.

11 THE WITNESS: No question about it.

12 JUDGE COTTER: I guess I'm a little troubled in
13 that in your direct testimony you recited a number of major
14 horror stories and I could see why the NRC would become
15 considerably upset and why they would indefinitely suspend
16 people for things like that.

17 I have difficulty here because what we've got is
18 two days' observation. We've got a fellow who, if you look
19 at it one way, lied out-and-out to the inspectors and then
20 didn't want to get caught. If you look at it another way,
21 he was panicking in the circumstances. I'm a little
22 concerned because it seems to me that we've got a situation
23 where you've got somebody performing radiographic functions
24 in a rural or at least a reasonably isolated set of
25 circumstances, who otherwise has no record of misfeasance,

1 no prior record that appears anywhere here.

2 So I'm concerned that if you interpret this set of
3 facts one way, you've got somebody who is out there killing
4 people or, if you interpret them another way, you're taking
5 an elephant gun to an ant. I need some help from you, I
6 think, in this regard.

7 THE WITNESS: As I said earlier, we have an audit
8 type inspection program. We're not there all the time. In
9 almost every case when there is an overexposure, it's the
10 first time he ever failed to make a survey. I think this
11 Commission should be concerned about the potential. I don't
12 think we have to wait until we have an overexposure, a
13 serious overexposure before we take strong action.

14 In this case, on two days we observed these
15 activities occurring. This was not a day where -- certainly
16 on October 25, when you look at the film, it doesn't appear
17 to be pressure. There's no rush. I think even Mr. Murray
18 noted on November 1 when he viewed the tape that it doesn't
19 show him being in a hurry.

20 We can only act on what we see and I think it's a
21 proper presumption to make that if on these two days he was
22 doing it wrong, probably on other days he probably was also
23 doing it wrong, but he's lucky that he hasn't had a source
24 disconnect and, thus --

25 JUDGE COTTER: We can't make decisions on what

1 might be, what might have been.

2 THE WITNESS: That's true.

3 JUDGE COTTER: We don't have --

4 THE WITNESS: We can only take what we have, and
5 what we have --

6 JUDGE COTTER: You have two days which appear to
7 be in essentially a continuing incident, really.

8 THE WITNESS: Separated by a day. We don't have a
9 prior record here, but, again, we only look at radiography
10 once a year and even then we don't inspect every
11 radiographer.

12 JUDGE COTTER: I take it, though, that when you
13 do, when you find someone, that there's really no -- I find
14 no provision in any of these regulations for mitigating
15 circumstances. For example, there is no provision for, as
16 was mentioned by someone earlier, I think Judge Lam,
17 supervision for a period of time. There's no provision for
18 whether or not there's some degree of sincerity in the
19 individual's having committed -- since he'll regret for
20 having committed these kinds of transgressions.

21 It's almost like a penalty kind of a reg rather
22 than something that improves the climate, if you will.
23 Would you agree with that?

24 THE WITNESS: I think it's remedial in the sense
25 that it's used to provide a clear notice to others and

1 hopefully improve others' performance. As I did say, the
2 orders provide a mechanism for relaxation and there may well
3 be steps that could be taken --

4 JUDGE COTTER: It says that it shall be, but it
5 doesn't say how, when, where or why.

6 THE WITNESS: That's right, and those, again,
7 judgments --

8 JUDGE COTTER: In a sense, that makes it almost
9 meaningless or the subject of someone's whim at some
10 particular point in time. It's a difficult issue, I think,
11 we're looking at here. What we're looking at ultimately is
12 almost a policy type issue.

13 THE WITNESS: There's no question about it. And
14 when I look at these cases, I look at all the radiography
15 cases, and they come in different sizes and different shapes
16 and people have different attitudes. I think I said earlier
17 whenever we have one of these situations, the individual
18 says in every sincere way I'm going to do it right next
19 time.

20 JUDGE COTTER: You're unable to respond to that
21 under this regulation.

22 THE WITNESS: Well, we can measure the sanction,
23 the time period. Certainly the enforcement policy doesn't
24 dictate a result. I think other than if you lose reasonable
25 assurance, you have to address that. I don't think that we

1 can let licensees perform activities where you've lost
2 reasonable assurance.

3 JUDGE COTTER: Well, let's talk about that a
4 little bit. Assuming that's a reasonable conclusion for
5 purposes of this line of inquiry, how do you regain
6 reasonable assurance? Do you just get that simply through
7 passage of time?

8 THE WITNESS: That is a very difficult question
9 and answer, Judge Cotter.

10 JUDGE COTTER: I don't see it addressed anywhere
11 in all this.

12 THE WITNESS: We spend a lot of time among the
13 staff discussing that question. Time cures a lot of things.

14 JUDGE COTTER: Well, sometimes they just go away
15 and that's the cure. But I don't see that as a cure.

16 THE WITNESS: That's why as part of the rulemaking
17 on wrongdoing we decided to have a term of years rather than
18 being indefinite. But all I can offer at this point, absent
19 some proposal, the three-year time, we think, would be
20 sufficient to give the message to provide the cure.

21 JUDGE COTTER: That's another problem I find with
22 your testimony. It looks to me like there's an element of
23 using Mr. Murray in here to address other people, other
24 radiographers. It seems to me that that's not what we do in
25 the United States of America, use some people to get to

1 other people.

2 THE WITNESS: Well, the fundamental reason for
3 issuing the order is to remove the safety hazard. At the
4 same time, I think enforcement actions, by their nature,
5 provide notice to other individuals, because if you see
6 what's happened to one person, you might not desire that
7 happening to you, so you try to do it right to avoid a
8 similar situation.

9 JUDGE COTTER: But doesn't that lead you down the
10 road of temptation of making the sanction particularly
11 severe to discourage others? It pushes you in the direction
12 of severity rather than in the direction of appropriateness.

13 THE WITNESS: A combination thereof. I think it
14 pushes us in the direction of a combination of severity
15 appropriate to the circumstances and judgment as to what the
16 right thing to do is. There's a balance of a lot of
17 factors. Clearly, these violations are not insignificant.
18 These are significant violations, you have the integrity
19 question that adds to it.

20 A strong sanction is clearly appropriate. And I
21 think more than just a civil penalty, more than just
22 increased oversight because increased oversight will give
23 you assurance that when you're there and the person knows
24 you're there, it's very hard to observe radiography without
25 the radiographer knowing. We've discussed the importance of

1 monitoring the area.

2 And the question is how you have that assurance
3 that when someone is not watching, when you have a skilled
4 and experienced radiographer, he's going to be doing it
5 right. I don't think there's a simple answer to that.
6 That's why we thought the suspension was appropriate. I
7 guess I'd be the first to admit that three years is not
8 perfect and -- I mean, three years is perfect and two years
9 and three weeks, for example, is not perfect, a range there.

10 In the case of CNR Laboratories, Mr. Joukoff
11 referred to when he mentioned another surveillance where we
12 issued an order, there the sanction was five years. But,
13 again, that was a slightly different situation because there
14 the company fired the individual and there the order was
15 give us notice if you rehire the person for the next five
16 years, and then we would have to decide, once we had that
17 notice, whether we need to issue an order at that time.

18 Each case is on its own merits. We exercise
19 judgment. I've given you the rationale for our decision.
20 The facts speak for themselves and there's nothing specific
21 in the enforcement policy that speaks to what the particular
22 sanction should be, because these things, I think, require
23 judgment. I think that's about all I can say.

24 JUDGE COTTER: I certainly appreciate your
25 frankness and the chance to discuss it with you. Anything

1 further of this Witness?

2 [No response.]

3 JUDGE COTTER: Thank you, Mr. Lieberman.

4 [Witness excused.]

5 MR. BACHMANN: Your Honor, that concludes the
6 staff's direct case.

7 JUDGE COTTER: Your turn, Mr. Murray. What would
8 you like to do?

9 MR. MURRAY: What I've done, Your Honor, is I've
10 outlined things that I want to ask myself and if it's all
11 right with Mr. Bachmann and the Judges, if he could, while
12 I'm up here, also address these things in case I do not. It
13 would be easier for me.

14 JUDGE COTTER: If you would like Mr. Manly to ask
15 the questions, that would be fine, or you can just make a
16 statement, whichever way you want to do it.

17 MR. MURRAY: I guess I'll take the stand, then.

18 MR. BACHMANN: Your Honor, can we have a brief
19 recess before we start on this next phase, maybe about five
20 minutes?

21 JUDGE COTTER: All right. Five minutes.

22 [Brief recess.]

23 JUDGE COTTER: On the record. Are we ready to
24 proceed?

25 MR. MURRAY: Yes, sir.

1 Whereupon,

2 THOMAS MURRAY,

3 Petitioner, was called for examination on behalf of
4 Petitioner, and, having been first duly sworn, was examined
5 and testified as follows:

6 JUDGE COTTER: Have a seat, Mr. Murray.

7 MR. MANLY: Should I identify myself?

8 JUDGE COTTER: If you would, please, for the
9 record.

10 MR. MANLY: My name is Philip Manly. I'm a
11 certified health physicist.

12 JUDGE COTTER: You have to speak up a little, too.

13 MR. MANLY: My name is Philip Manly. I'm a
14 certified health physicist. I have been working with Mr.
15 Murray over the last two months on this issue and basically
16 what I will be doing is to give him some questions to help
17 direct his thoughts on his own testimony. I think he wants
18 to talk about the order, the Docket No. 030-30870 and the
19 reasons or the actions behind the order to remove him from
20 the Fewell Geotechnical Engineering license.

21 I think we'll start by talking about some of the
22 items that were brought up in that order, and he will be
23 giving his testimony, his explanation of his actions in each
24 of those instances. The first item that was identified in
25 the order was performing of radiographic operations without

1 performing surveys to establish the radiation boundaries.
2 Would you want to talk about what your actions were and what
3 the thoughts were behind those actions, what your feelings
4 were or what your understandings were as you did those
5 things?

6 DIRECT TESTIMONY

7 THE WITNESS: This is the survey of the
8 boundaries.

9 MR. MANLY: Yes.

10 THE WITNESS: On the 23rd and 25th of October.

11 MR. MANLY: Yes.

12 THE WITNESS: I had been here -- in fact, it's
13 written down here. I've been on this job site like 12 times
14 prior to this and I've done a lot of surveys. Now, the way
15 I posted this area was I posted the road all along the
16 roadway and I would put my 100 MR per hour posting at about
17 15 feet from the ditch.

18 And as far as the coral hillside, it was -- I
19 considered it inaccessible. It was inaccessible to the
20 public, although there were instances when construction
21 vehicles and construction people would come back and forth.

22 JUDGE COTTER: Could you orient us, Mr. Murray?
23 The road is south and the coral hillside or berm is north,
24 is that correct?

25 THE WITNESS: I believe so. Based on this, this

1 is how I set up my boundaries each day on this job site.
2 After that, my primary -- well, the areas I was primarily
3 concerned with were the -- down from -- well, the way my
4 hoses -- they just demonstrated this camera up here.

5 There's a collimated section and where the hose,
6 the guide tube connects to the collimator, it's at that end
7 that you have a high intensity of radiation. So I would
8 always have to be concerned with the opposite direction that
9 I am in with the crank. That is to say if people are on the
10 opposite side of where I'm shooting, those were the people I
11 had to be more concerned with than anyone else.

12 I would take the people from the job site and
13 several times I would tell them that they had to stay 15
14 feet away from the ditch and if they had to come through my
15 boundaries, to signal me and come around, and if they were
16 in the ditch, that they should be at least 80 feet or at
17 least two pipe-lengths, is how they viewed it, down from
18 where I was.

19 As far as surveying, I based it on prior surveys.
20 I had done several surveys and --

21 JUDGE COTTER: At that specific site?

22 THE WITNESS: Yes. On that specific site.
23 Naturally, I moved down into the ditch, but it changed very
24 little. The ditch was still the same depth, although, like
25 Dave said, that there were generally on the coral side, on

1 the inaccessible side, it would slope a little bit.

2 Also, along with this I would use, in a lot of
3 cases, sandbags when I was in a congested area with a lot of
4 people and construction. I would put a sandbag behind my
5 hose so they would be more shielded and that they didn't
6 have to --

7 JUDGE COTTER: Did you do that here?

8 THE WITNESS: Excuse me?

9 JUDGE COTTER: Did you do that on October 23 and
10 25?

11 THE WITNESS: I don't know if I did or not, and I
12 don't know if they witnesses me doing that, but I had
13 sandbags in the back of my truck for two reasons; that, and
14 in case the source ever got stuck, I could shield it with --
15 I had six -- I had about half-a-dozen sandbags, where, if
16 something ever did happen, all I'd have to do was cover it
17 with these sandbags and shield the source until I could get
18 the RSO or the health people to come out and help me
19 retrieve the source.

20 JUDGE COTTER: Before you go on, you said that you
21 had surveyed the site at some time during your prior 12
22 visits to it. Did you survey the entire perimeter?

23 THE WITNESS: Well, I surveyed -- at one time or
24 another, yes. The entire area, at least all sides were
25 surveyed at one time or another. Primarily, when I first

1 started this job, when I first -- there was more congestion.
2 On the days that Dave and Phil came out, in particular the
3 25th, there was no one even around me.

4 On the 23rd, people happened to be coming around
5 for one reason or another, but they weren't really working
6 in that area. But in the beginning of that job, a lot of
7 times I had welders that weren't that far away. So I had to
8 survey almost every time I was out there, and generally I
9 would go out and survey where they are.

10 On the roadside, I pretty much had established my
11 boundaries and I knew what they were. Fifteen feet from the
12 ditch, I recall there was one time there were people moving
13 piping. I took one -- and it was five MR in an hour, at 15
14 feet and one pipe-length down. I did do surveys prior to
15 these days and after that I pretty much based it on where I
16 was.

17 If I was above the ground, then naturally I have
18 to do different surveys and take into consideration people
19 in the area and my exposure times. In all these cases, I
20 might add that they were all based on what I define as an
21 isodose, that I would be doing three or four pipes in this
22 area and I would move down generally 80 feet because they
23 were doing splices.

24 So I would do every other weld length. So I would
25 generally move down 80 feet from where I was the time before

1 and have to move everything down. So considering that and
2 the number of exposures, which are written here and none
3 were over half a -- well, I take that back. There was one
4 large pipe in there that was closer to a minute and three
5 exposures were done on that, but the rest were around 25
6 seconds.

7 So I used that and based that on my establishing
8 my boundaries. So in no case -- I would just push my
9 boundaries out here near the road and my high radiation
10 signs, but as the way I understood it that this could be
11 done and that, secondly, I was always well under the limits
12 and protecting the people and that no one would acquire a
13 dose of in excess of two MR an hour.

14 MR. MANLY: At that time, then, you felt that you
15 could establish radiation boundaries on the basis of your
16 general experience, plus past physical surveys that were
17 done at the area.

18 THE WITNESS: Yes.

19 MR. MANLY: Do you feel that way now?

20 THE WITNESS: Well, no. No. See, after all this
21 -- well, after these gentlemen came out and after my second
22 deposition -- well, actually before my second deposition, I
23 talked to Phil Manly and what I got from Phil Manly was he
24 was asking me what had happened, my opinions on the things
25 that did happen, and he brought to my attention that I was -

1 - my attitude was subjective and that -- and he made me see
2 things in a different light.

3 I didn't see things in the NRC point of view. I
4 saw things in my own point of view, and being on the job and
5 just doing what I could to protect the safety of people
6 around me and really not adhering to the rules and
7 regulations as I should have been.

8 Actually, in this case, it was my procedure that
9 instructed me to do surveys, physical surveys. When I say
10 that, I mean physical surveys.

11 MR. MANLY: Another item talked about roping off
12 of the boundary or failing to rope off the boundary and
13 failing to post signs for most of the boundary on one of
14 these sites. Can you talk a bit about what your basis was
15 for your actions on the posting that you did?

16 THE WITNESS: Yes. As I said and as it is
17 documented in here, on the 4th we had the inspection with
18 Mrs. Rathlinger and Mr. Payne, and during their audit of our
19 facilities, I had brought up the problems I was having on
20 this job, about roping off because it's a difficult area to
21 rope off and control in that manner.

22 And two things I asked were can I use the isodose,
23 is it -- actually, I asked them to define two MR in an hour
24 as my boundary because if I come over to -- the way I saw it
25 up until this time was it says you rope off at two MR an

1 hour. And so I said, now, in my mind, does that mean two MR
2 in any one hour or is that based on a dose rate on your
3 meter at two MR in an hour.

4 Then when I come to the permissible levels of
5 radiation in a restricted area, it says radiation levels
6 which an individual continuous present in that area and
7 could result in receiving two MR or more. So that told me
8 that this must be based on a two MR dose. And at the time,
9 she -- well, I don't want to speak for Beth, but the way I
10 understood it, she said, oh, yes, you can do that.

11 And I also brought up the rope. I always
12 understood that all areas had to be roped off, but when I
13 looked through the NRC 10 CFR, I never saw where you had to
14 rope off boundaries. All is they had to do was be posted.
15 And I asked her about that and she said, no, they don't have
16 to be, but if your procedure says it -- I'm assuming she
17 said this. I'm sure she did.

18 That if your procedure says it, then you have to
19 do it later. Now, whether or not she said that, I don't
20 know. But from that day on, I was going out on this job
21 because it was so difficult to rope and I wasn't using rope.
22 Up to that point, I always used rope. When the two
23 gentlemen came out a year prior to this in March, and I
24 think we brought this up earlier, they came out and someone
25 had called them, I don't know who called them, but this

1 referred to -- I had boundaries up.

2 I had ropes up and someone witnesses concrete
3 people coming inside my boundaries and performing some
4 concrete work. Well, in fact, what I did is shut down and
5 allow this engineer to bring the concrete in and do his job
6 and then I roped it back off and resumed the radiography.

7 Well, even at that time I was using ropes and,
8 again, that was all cleared up and they had asked everyone
9 and it was really never a problem. As far as when I stopped
10 -- it was after I met with them and whether I understood it
11 that I could do it or I couldn't do it or whether she said
12 you couldn't do it unless your procedure says, I don't know.
13 All I know is I know it wasn't in violation of the license,
14 that I went ahead and did it, and really didn't think too
15 much about the procedure being as serious as the 10 CFR.

16 It's hard to look back at it and say how I
17 justified that in my mind and performed radiography that
18 way.

19 MR. MANLY: What about posting on the side of the
20 trench where the berm was?

21 THE WITNESS: On the 23rd, I can't -- I always
22 consider the road -- and there were times when I posted this
23 area. Now, on the 25th I knew this was inaccessible because
24 they had taken out the access road to this side of the
25 ditch. On the 23rd, I don't know if it was in those

1 conditions -- those conditions were still in effect at that
2 time, but I knew they were out on the 25th because the
3 engineer told me.

4 JUDGE COTTER: When you say they took out the
5 access road you mean the road between the ditch and the
6 coral berm?

7 THE WITNESS: What it was was an access road that
8 actually --

9 JUDGE COTTER: A dirt road.

10 THE WITNESS: It actually -- the ditch was filled
11 and the trucks and cars -- well, the equipment went right
12 over the ditch and then on this particular day they had to
13 continue on with it, so they took the access road out.

14 JUDGE COTTER: Just to make sure it's clear in the
15 record as to where the access road was, it was on the coral
16 berm side of the ditch rather than the road side, the paved
17 road side.

18 THE WITNESS: Okay. The dirt road was right along
19 the coral hill and access to that road was a little road
20 that they can't -- they didn't -- the ditch discontinued,
21 there was fill, and then it continued on where they hadn't
22 put the pipe, and they could access the back road from that
23 point.

24 JUDGE COTTER: Okay.

25 THE WITNESS: I don't know whether it was there on

1 the 23rd or not, though. I don't recall. But I know it
2 wasn't there on the 25th.

3 MR. BACHMANN: Your Honor, I believe that picture
4 No. 6, I believe it was Board Exhibit 2 or 3, might be more
5 helpful.

6 JUDGE COTTER: Why don't you deal with that on
7 cross.

8 MR. BACHMANN: I believe Mr. Murray has got his
9 set there.

10 JUDGE COTTER: Those pictures appear to show a
11 road on the coral side of the ditch.

12 THE WITNESS: Right. What happened was the access
13 road was actually -- it came right across the ditch. It was
14 just fill and they took that out, but it was much farther
15 down. It was probably 100 to 150 yards down from this point
16 where I was working. From this point, it wasn't but -- in
17 fact, it was just over outside this picture where the 25th -
18 -

19 JUDGE COTTER: What's the number of the picture
20 you're referring to?

21 THE WITNESS: This is No. 6. Like I say, down
22 there where you can see the portable john here, it was
23 probably only 15 yards forward of that that I was conducting
24 radiography on the 25th of October. Well, we're talking
25 about the -- I didn't post it because I didn't find it an

1 accessible area to the public. I basically just posted the
2 area I found accessible to the public.

3 JUDGE COTTER: When you say the public, I take it
4 you include the workers working on these pipes.

5 THE WITNESS: Good question, sir. Actually, the
6 workers, they all know what my requirements of them were.
7 They know that they could not -- they weren't supposed to
8 come -- in fact, they weren't supposed to come within two
9 welds of me without stopping and letting me know and letting
10 them through or signaling them.

11 Now, on picture No. 9, with the gentleman walking
12 by, this man had come from behind and if you notice, you can
13 see my source guide tube. You can see the high radiation
14 side. Below that, you see the weld that I'm shooting. And
15 it's apparent that I'm shooting what would be considered --
16 I'm shooting at 12:00 down.

17 So when I turned around -- well, I turned around
18 and I saw this gentleman. I saw how far away he was. So I
19 really didn't bother him because of the shot I was making
20 and I knew he wasn't -- as far as the radiation levels
21 there, that they were low enough where he wasn't acquiring
22 two MR in any one hour at that point.

23 If I had set signs -- if you go back to picture
24 No. 6, if I had posted this area, which I have done, I would
25 have posted it -- it's hard for me to describe. You can see

1 the tread marks from the road, the wear marks. I would have
2 posted it on the first lighted area.

3 The man was actually a few feet south of that, but
4 I would have posted it probably about ten or 15 feet from
5 there. He's actually more like 20 or 25. So he still would
6 have been outside my radiation boundaries in the way that I
7 post them, because I never really post it off the road. I
8 put signs on the road, but I never made it inaccessible for
9 the trucks to come back and forth. I just put them up so
10 they'd be aware of where the boundaries were.

11 I didn't -- in fact, I didn't -- they're always
12 allowed access through that -- especially the trucks that
13 come by and thought they were supposed to come through me
14 first.

15 JUDGE COTTER: It sounds pretty sloppy, Mr.
16 Murray.

17 THE WITNESS: It was very sloppy, sir. It was.

18 MR. MANLY: The next area, I guess, is one of the
19 important ones, which is the surveys on the exposure device.
20 Can you explain the different types of either survey
21 instruments or survey meters or alarming dosimeters or
22 pocket dosimeters or any type or all types of radiation
23 metering equipment that you normally carried with you.

24 THE WITNESS: I carried the audible alarm 400
25 meter, which has a capability of one MR to 1,000 MR. I

1 carry my film badge. I carry generally two dosimeters. One
2 is a zero to 200 MR scale and the other is usually, but not
3 in all cases, zero to 1,000 MR. Then I carry the audible,
4 this audible rate meter which alarms, also.

5 Aside from the 400 meter, I would generally
6 incorporate the 492 which is an older model, non-audible
7 alarm, but I would use that -- I would keep that because I
8 had one on my side and I would generally keep the other
9 meter up near the camera for surveys and things like that.

10 On October 23, that same rate meter, the 492, you
11 can see it on picture No. 6. You can see it on the box
12 here, because he was up here and taking measurements of
13 radiation areas. And I had the audible one. But generally
14 I have this one in the ditch with me, along with the yellow
15 400. So I usually carry two meters with me, along with the
16 rate meter and my dosimetry and an extra dosimeter and my
17 film badge.

18 MR. MANLY: The Victoreen 400 survey meter, at
19 what point does that alarm?

20 THE WITNESS: It alarms at -- you can set it to
21 alarm at whatever you want, 10 MR, 100 MR, or 1,000 MR.

22 MR. MANLY: How did you have it set?

23 THE WITNESS: What I would do is I would set --
24 because the reason I didn't have this particular meter on
25 the 25th is because it got saturated. Lo and behold, I find

1 out that it's -- it's ultra-sensitive, so I can't leave it
2 in the two MR position or the low scale, the one MR to ten
3 MR scale for the whole period of time. Otherwise, it will
4 saturate if I go up there and I'm in a high radiation area.
5 So what I'll do is once I get back and I crank out, it's in
6 two MR and it will go up. And then I'll step up the ten MR
7 scale, which will carry me up to 100 MR.

8 What I'll do is I'll walk back and I walk back far
9 enough where I am at two MR or less. Sometimes situations
10 arise where I can't get that far back and I'll be at five
11 MR. But I at least mark the five MR radiation area or I
12 stand back where the two MR is. That's why my helper, if
13 you notice, is always behind me.

14 So when I would come and crank, I would still be
15 in the ten MR zone. When I crank in, the alarm goes off.
16 When I approach, I step back down. I'll just click the
17 thing down to the low scale. It's either that or it's in
18 the -- in these situations, it was always in the low scale.
19 It wasn't till after this I found out why it was saturating,
20 why the meter wasn't operating.

21 This is the second meter that went out on me and
22 that's how I got stuck using the 492 primarily on the 25th.

23 MR. MANLY: So you say the 400 was normally set so
24 that it would alarm at ten MR per hour.

25 THE WITNESS: Yes.

1 MR. MANLY: In addition, as you said, you also had
2 the alarming dosimeter. Why did you wear that?

3 THE WITNESS: My rate meter, yes.

4 MR. MANLY: No. The alarming dosimeter.

5 THE WITNESS: Yes. That's the rate meter.

6 MR. MANLY: At what rate does that alarm?

7 THE WITNESS: This alarms at -- actually, it's
8 supposed to alarm at 500 MR, but this one alarms a little
9 bit lower because I have a new rate meter now that clips on
10 my belt. And I've taken this and I've tested it as far as
11 exposing the source on this and it alarms a little bit
12 before, it's not quite calibrated at 500 MR. It's actually
13 a little bit less, more like 425 or 450. But primarily 500,
14 they're set for 500.

15 MR. MANLY: Why were you wearing that one?

16 THE WITNESS: This one?

17 MR. MANLY: Yes.

18 THE WITNESS: On that day?

19 MR. MANLY: Yes.

20 THE WITNESS: Right. Since I got it, I've always
21 worn it.

22 MR. MANLY: On the 25th, you said that the 400
23 meter was not working.

24 THE WITNESS: Correct.

25 MR. MANLY: So you relied primarily on the 492.

1 THE WITNESS: Right.

2 MR. MANLY: You said on some of the surveys that
3 you did not use the 492.

4 THE WITNESS: On some --

5 MR. MANLY: On the surveys, on the video tape.

6 THE WITNESS: That I didn't use it.

7 MR. MANLY: Yes.

8 THE WITNESS: No. I failed to survey my
9 boundaries with a survey meter.

10 MR. MANLY: If the source had been exposed, would
11 there be any other backup means or other means that you
12 would know or have found out that, in fact, the source was
13 not in its shielded position?

14 THE WITNESS: Well, I had the meter and the film
15 right there near the crank. That was one way, while I was
16 cranking, and this. If I walked up and it had been exposed,
17 this would have alarmed.

18 MR. MANLY: So that would have alarmed if the
19 source were exposed.

20 THE WITNESS: Yes. Besides, when I crank in, I --

21 JUDGE COTTER: For the record, you're referring to
22 the orange alarming dosimeter.

23 THE WITNESS: Yes. You can refer to this as the
24 rate meter.

25 JUDGE COTTER: Okay.

1 THE WITNESS: But when I'm retracting the source,
2 just by the number of turns -- I mean, I've used it so
3 often, I can tell if there's any deviation in the number of
4 retractions I make, the number of turns. I mean, there's
5 been times when I was -- to give you an example, there's
6 been times when I retract it out and my collimator and the
7 end of my tube would be bent in such a situation where it
8 didn't get quite all the way into the collimator to make a
9 shot. And I could tell. So I'll retract it, go and I'll
10 correct the radius on the bend.

11 So it's easy to tell if your crank -- even if it's
12 just as much as an inch, it's easy to tell if your crank is
13 not all the way back in or all the way out, because you've
14 done it so many times and you know how many number of times
15 it's gone out. It's hard to explain, but you know
16 immediately, if you've done radiography before.

17 MR. MANLY: What do you feel now is the proper
18 procedures to be used on doing the surveys?

19 THE WITNESS: Like I said before, I had the 492
20 and I would pick it up and survey like this, look down at
21 it. It was between the front -- the shipping plug, the hose
22 connection, it would be between that and the back of the
23 collimator. So if it was anywhere in there, it would
24 indicate, and the other meter was here on my belt. But, no.
25 I should take the meter, this meter off and survey the

1 entire circumference and the hose and the collimator.

2 I'll say this. With the 400, that's the reason I
3 brought the 492. I was getting too used to listening to
4 that alarm. You'd crank out, it would beep-beep-beep-beep,
5 and then it stops when it's collimated. I would look at it
6 to move back and know where I was, but I would go back and
7 crank the source out and it would alarm and go off as I
8 would retract or expose the exposure device.

9 Now, walking up -- the minute it goes off, you're
10 walking up, you know that it's -- I would get it in my mind
11 that it's in, and now I would approach the source, it was on
12 my belt. There were sounds, I would look at it. But in
13 that ditch, I depended too much on the 492 and this thing on
14 my belt and wasn't doing the proper surveys.

15 To answer the question, yes, I should be surveying
16 the entire circumference of the camera and the guide tube
17 and the collimator as opposed to relying on that meter, the
18 audible alarm, and just picking up the 492 on the ground and
19 surveying with that.

20 MR. MANLY: I think the next area deals with the
21 entry of people into the restricted area. I believe you
22 have a series of pictures that were entered into exhibit
23 previously. Why don't you go through those and identify
24 them and talk about the individuals who are shown in those
25 pictures.

1 THE WITNESS: Okay. We've already discussed the
2 gentleman walking by. Now, the two Finley people had showed
3 up and primarily they were helping Gary Wood had --

4 JUDGE COTTER: Which picture should we be looking
5 at?

6 THE WITNESS: In particular, there's No. 10 here,
7 No. 11, and the gentleman on the bank had the other meter
8 and he had it near the truck. He was monitoring the
9 boundaries for me out there and the other gentleman in the
10 ditch was -- what he was doing was changing IDs. I used
11 lead numbers and he was changing the IDs for me and taping
12 up the --

13 JUDGE COTTER: This is the film strip IDs?

14 THE WITNESS: Yes. The lead letters I would tape
15 to the film to identify each exposure, and that's what he's
16 doing. The gentleman in No. 12 is -- he's an engineer, some
17 sort of weld inspector. You can see me in the ditch. At
18 this point right here, I'm standing at the two MR intensity
19 with my meter and he is behind me. And you can see where my
20 -- as Dave pointed out, you can my restricted area cone
21 here, and he's inside it, which brings up another --

22 JUDGE COTTER: You say he's an engineer. Who is
23 he?

24 THE WITNESS: He works for American Pipe and
25 Boiler and I don't recall his name. He was new on the job.

1 Seems like a lot of people showed up this day for some
2 reason. This was one of them that really doesn't have any
3 business out there and just came up to look in the ditch and
4 see what was --

5 JUDGE COTTER: Did you tell him to go away?

6 THE WITNESS: Excuse me?

7 JUDGE COTTER: Did you tell him to go away?

8 THE WITNESS: I don't think so because I knew he
9 was all right where he was, which, again, is poor judgment
10 because here you see my restricted area sign. As Phil has
11 pointed out, it sends the wrong message to these people that
12 if they can come in here, regardless of whether it's safe or
13 not, that if they can come in here every once in a while
14 that it really doesn't put any restrictions on them, that
15 they take it for granted after a while.

16 I'm looking for the picture of the forklift, which
17 is picture No. 17. This is the picture -- and if you take
18 that picture with picture No. 6, you can see where we are as
19 opposed to the palates. The gentleman, the second gentleman
20 is behind the forklift. You can barely make him out. Now,
21 what had happened on here was these two pulled up, I was
22 ready to make an exposure.

23 Gary Wood, up on the bank with the other meter,
24 had told them to get back. In fact, he told this guy to
25 just get behind the forklift here. Now, after he had gotten

1 back there, for some reason, when I -- he came back out
2 again while I was exposing and looked over into the ditch.
3 Again, if I remember correctly, Gary told him to stand back
4 and back off the ditch and in back of the forklift.

5 But, again, these guys, they -- you can see my
6 cone. This is the outside of my boundary. They had just
7 come inside that cone to pick up those palates. Again, I'm
8 basing my two MR restricted area on an invisible radiation
9 area instead of actually my cones where I just put them out
10 on the road.

11 JUDGE COTTER: You're saying the forklift was
12 outside the two MR area?

13 THE WITNESS: Yes. They were outside the two MR
14 area.

15 JUDGE COTTER: In picture 17, how far is the
16 forklift from your source?

17 THE WITNESS: About 40 feet from the source,
18 approximately. I think 40 feet, 40 or 50, I'm not sure. I
19 don't recall what the lengths were, but I think they were 40
20 foot lengths of pipe. And they're exactly one pipe-length
21 away. As you can see, the next pipe weld down. So they
22 were about 40 feet away from there, 40-50 feet, and I was
23 making my first exposure, in fact, because I can see the
24 film and I was shooting towards the coral reef.

25 I think that explains about all the people that

1 entered in or around the area that I was radiographing.

2 MR. MANLY: These pictures were taken on the 23rd
3 of October.

4 THE WITNESS: Yes.

5 MR. MANLY: On the 25th of October, were there any
6 people who tried to enter the area?

7 THE WITNESS: No. There was no one, other than
8 Phil and Dave.

9 MR. MANLY: What did you do with them?

10 THE WITNESS: When I turned around -- in fact, I
11 had just exposed the device. I turned around and I saw
12 these two actually coming towards the source. So I yelled
13 to them and I think they acted as if they didn't hear me.
14 But they kept on coming and I yelled again to stand back and
15 I started to walk towards them. And that's when Phil pulled
16 out his badge and showed me his badge and told me to retract
17 the source and that they were NRC representatives.

18 They were the only ones, other than after they
19 were talking to me the engineer -- in fact, the project
20 engineer came up, but the radiographic operations were shut
21 down at that time. But other than that, there was no other
22 people in the area that I recall at all that day.

23 MR. MANLY: I guess we can move on to the issue of
24 willfulness of misrepresentation to the NRC. Can you give a
25 little bit of background or an environment from which you

1 were working that might have set your frame of mind at the
2 time that these inspections occurred?

3 THE WITNESS: That they showed up on the job site.

4 MR. MANLY: Around then or prior to then? As you
5 had told me before when we talked about this, your feeling
6 of what people -- your coworkers of said of what your
7 response to the NRC was, of what you felt that your
8 relationship should be to them.

9 THE WITNESS: He's referring to people that -- as
10 these guys all well know, people that work for Finley
11 Laboratories and just a consensus after working there for a
12 year-and-a-half or so, talking about the NRC and what they
13 had gone through with it; oh, yeah, they try to be your
14 buddy and that, in fact, they're not; they get information.

15 I described this to Phil when we had our
16 deposition. I got this -- I acquired this attitude where --
17 you know that I never really looked at it as myself being
18 responsible to them as opposed to being responsible to
19 myself and protecting my job and my employer and things like
20 this. It was almost looking at them as the enemy and I'm
21 out here doing radiography and they're out here to try to
22 find something to prevent me from doing radiography.

23 On the particular day when they showed up, first
24 of all -- okay. This is the week when Jiogi was due to have
25 our baby and that's the only reason I had that phone with

1 me, that modular phone and my beeper. So when you guys look
2 at this, when you gentlemen look at this film, it looks like
3 I'm walking around and I'm doing things kind of slow, but
4 just the fact that the way I was setting up things, I could
5 look at myself and I knew exactly what was going to -- I'm
6 just thinking of something else.

7 I wasn't thinking about everything I was doing. I
8 did my dosimeter. I went through the routine of making sure
9 certain things were done. My things were posted. At the
10 same time, I'm thinking of a phone call that I'm going to
11 get at any minute now from her. And then after this I'm out
12 there and I'm shooting and I've got a radiac, I'm used to
13 having one here in that audible alarm, and now I'm using a
14 radiac that I'm not accustomed to using, but it's usually up
15 near the camera.

16 JUDGE COTTER: What is a radiac?

17 THE WITNESS: I'm sorry. The meter, survey meter.
18 That was left always at the crank, as you can see in that
19 film. I would just run up and change the film and come
20 back. I can see in here the only times I locked it is when
21 I moved the camera. Now, when these two arrived, I must
22 have done five or six exposures, then they arrived, and I
23 saw the badge, and immediately I just panicked.

24 I was trying to think of anything I did wrong or
25 everything that I had done right. I was real confused and

1 real wired and then they came over and they started asking
2 me questions, looking at equipment. I don't want to refute
3 what Phil said or what Dave said. I'm sure what they say is
4 what I said or what I -- the answers that they got from me
5 were probably what I said.

6 But at the time, and even when I look back at it,
7 they even asked me -- they asked me questions that had just
8 happened moments ago and I had trouble remembering what I
9 did just minutes prior to them showing up. So when they
10 asked me in particular, I was answering routinely. I was
11 answering as if -- they would ask a particular thing; well,
12 how do you perform this and how do you do that, and I said,
13 well, I do it like this and, did you, well, yeah.

14 And before I had a chance to think about -- I was
15 just answering yes, yes, yes, without even thinking. At the
16 deposition later, I know it got started and I recall one
17 period of time when I stood up and walked out. I stood up
18 and I said, yes, I know I didn't do these things every time.
19 I couldn't say for sure what I did and didn't do, but I knew
20 I dian't do it every time.

21 In fact, I was positive because I had a different
22 meter, for one reason. But I stood up and I told them that
23 I was going to leave and I know they recall this, and I was
24 pretty upset. She was in labor at home. We just came from
25 the hospital and, in fact, when I got done with the

1 deposition, I went back to the hospital and she had our
2 child several hours later.

3 So it's hard to -- and I don't want to water all
4 this down by bringing these up and using them as excuses.
5 But my frame of mind at that time, and in particular at the
6 time of the deposition, was -- I wished I'd never been
7 there. I had every intention of going up and talking to
8 Dave and Phil and telling them anything they wanted to know.
9 I think I was only half listening. It's difficult for me to
10 explain it, the frame of mind I was in, but I was extremely
11 stressed out.

12 I know I got off the beaten path. What was your
13 question, again?

14 MR. MANLY: You were talking about the willfulness
15 issue and about the environment that existed at the time of
16 the inspections.

17 THE WITNESS: The willfulness. Well, I'll say
18 this. This job is isolated. Now, especially on the 25th --
19 the 23rd was a bad day, these people that showed up, and it
20 was an extremely bad day. People seemed to be coming from
21 everywhere. Up till this time, I never had anything like
22 that. So many people coming up and pulling away palates and
23 all o' a sudden I look over here and there's a guy going
24 down the road.

25 All these people know, they've been told a million

1 times. I've been out there several times. They all know
2 that they're not supposed to come within a certain distance
3 of me or the source. They know where I am. They've been
4 told several times. They know what the signs mean, and,
5 yet, even this engineer, and he knew, he came in, walking
6 over the ditch.

7 Why I didn't push away and yell at the time, they
8 were there and they were in safe areas and they weren't
9 walking towards the source. I don't know whether it would
10 have been wise to run up and crank in the source and expose
11 it instead of leaving it in the collimated position for only
12 20 seconds or -- I don't know. I really can't answer as to
13 why I didn't yell at these people or push them back
14 immediately when they were so close or inside my boundaries,
15 my posted boundaries.

16 But I knew in all cases that these people, where
17 they were, because I had been in all these areas. I knew
18 what the radiation levels were. I know these people were
19 safe. I know what my exposure time is. I know which
20 direction it's going. I know it's down here. It's against
21 the dirt and, in this case, you can see the 20-inch is
22 almost against the bank, yet my source is down at what would
23 be considered the 4:00 or 5:00 position, and it's shooting
24 up this way.

25 Looking back, in retrospect, I look at this and I

1 saw the film and I was really embarrassed and I'm still
2 embarrassed. I really pride myself in my work and in
3 radiation safety. And, again, this is an isolated job.
4 This is not the way I routinely do radiography.

5 I've been downtown, I did a job for HECO where I
6 came down Vineyard Bou'evard. You people are not familiar
7 with it, but it went straight through downtown. This is a
8 situation where everything is taken into consideration.
9 There are no -- it's not like this. I'm thinking all the
10 time about people being around. I'm really aware. Ropes
11 are all over the place. Meters, I'm scanning all the area.

12 It's just a different frame of mind. Here, I got
13 too complacent. I really did. It's primarily because of
14 the area I was in. I'm down in a ditch. I took things for
15 granted and I shouldn't have and I understand that I
16 shouldn't have. I should treat it as I did downtown, that
17 there are people all over.

18 MR. MANLY: You actually had been talking about
19 what you thought your relationship was with the NRC and the
20 environment that existed that led to the statements that you
21 gave to them on the 25th. What's changed since then?

22 THE WITNESS: I'm here, I'm talking -- I see Jim.
23 I see -- I know Phil, I know Dave now. I've talked to you.
24 More importantly, I've talked to you and you've brought to
25 my attention things that I never thought of. I think I

1 talked to Mr. Johnson about that, which would be in the
2 second deposition.

3 So my attitude was a whole lot different. I
4 wasn't so defensive. When I was at the first deposition, I
5 was walking in and I was there and I was on the defensive, I
6 was nervous, worried about Jiogi. There was so many
7 different -- well, my job, in fact. My job I was worried
8 about, the pipeline that I was on, these people were calling
9 me, hounding me because now I was using an x-ray tube to do
10 it, which isn't quite as fast.

11 They're calling me up that the job's not getting
12 done. In fact, we lost the job a few weeks later. So I
13 couldn't keep up with the x-ray tube. I was taking my job
14 too seriously, actually taking responsibilities; not that I
15 shouldn't have been taking -- it's just a radiographer and
16 an employee. I was taking on responsibilities that weren't
17 mine. It was the manager's.

18 After talking with Phil, Mr. Johnson and after all
19 was said and done, my attitude towards the NRC was and is
20 now entirely different. Now they say that we don't have --
21 they bring up things that I never thought of before. We
22 don't have the people to watch you. We expect you to be a
23 responsible radiographer. We expect you to consider the
24 public safety. It's you we depend on.

25 When you put it in that light, it makes everything

1 totally different, as opposed to someone that's chasing me
2 down and looking over my shoulder, that I feel is trying to
3 burn me. Totally different.

4 Knowing that the responsibility lies on my
5 shoulders and that these people are dependent on my
6 integrity is totally different. If I'd know this, if I had
7 the attitude I do now when this had happened and Phil and
8 Dave came up to me, I wouldn't have been nervous. I
9 wouldn't have acted like I did. It would have been entirely
10 different. I wouldn't have felt like the enemy has come
11 inside my territory and I have to put up all these defenses
12 and charades and not offer any information.

13 I never thought for a minute that I was really
14 lying. I was just trying to not offer any information.
15 Stupid rationale.

16 MR. MANLY: How do you feel this order will affect
17 your livelihood?

18 THE WITNESS: I know they asked me if I'm still
19 working for Finley and I am, but you know the circumstances
20 over there. I may not be working especially after today or
21 tomorrow, next week. I may not still be there. I've
22 already been laid off at Dick Fewell's. My income already
23 is almost -- it's only -- well, it's approximately two-
24 thirds of what it was when I was with Dick. But I worked a
25 lot of hours, but there was a lot of radiography to do.

1 Some of the problems -- well, I don't want to get
2 too far off the subject, but when I was doing radiography,
3 one of the biggest problems I had was not having an
4 assistant. I think if I had an assistant, a lot of these
5 things would have been alleviated. It was hard to do the
6 work that I did, ten and 12 hours a day, by myself every
7 day. And I was doing this every day. But I never -- I was
8 never exposed to the source. I never exposed anybody to the
9 source.

10 I never felt that I was compromising safety. I
11 always kept that in mind. I would never approach the source
12 without something on my body to tell me that the source was
13 not, in fact, retracted. I want to get back on track. What
14 was it? Oh, how will it affect me.

15 Well, not only -- going to other businesses and
16 things like this and trying to get a job. I really don't
17 think they're going to let me get onto another person's
18 license, first of all. Secondly, I don't want to be a
19 radiographer all my life. I want to do something like these
20 guys are doing. I want to get into being an RSO and get
21 into radiation safety and things like that.

22 I know what you see here doesn't really put me in
23 the best light as opposed to what I'm saying here right now,
24 but my whole life right now is radiography. I know it
25 inside and out and that's all I've been doing. I don't want

1 to be a radiographer for the rest of my life, but I do want
2 to stay in this field and acquire positions that these
3 gentlemen have and write licenses, be a -- something of this
4 nature.

5 So I'm really worried about my reputation more
6 than anything. Like I said, in the monetary aspect, it has
7 already affected the money that I bring in. Jiogi can
8 attest to that. I'm just worried about my future, that's
9 all, and I don't know what else I would do, particularly
10 here in Hawaii, except for radiography.

11 MR. MANLY: Are there other radiographers you
12 could work for in Hawaii?

13 THE WITNESS: Walashek. I could. I was offered a
14 job there before I got out of the military, but I don't
15 know. Even the job I have could be better. I mean, I could
16 be back at the mainland and have a much better job. From
17 the frying pan to the fire is how I feel about going to
18 Walashek and they're really the only other company, other
19 than going out on my own. But to go out on my own means
20 having to write up a license and submit it to these
21 gentlemen and set up a radiation safety program and write a
22 license and apply for being an RSO and things like this.

23 These are things I wanted to do. These were
24 things in the future. So I'm really concerned about those
25 things.

1 MR. MANLY: Do you think if you were to submit a
2 license for yourself that it would be approved?

3 THE WITNESS: I don't think so. No. I really
4 don't think so.

5 MR. MANLY: Do you think you could get yourself
6 listed on Walashek's license?

7 THE WITNESS: I don't think so. If I was to take
8 a license I wrote up and submit it to someone else with
9 their name on it, it would be approved. In fact, as opposed
10 to this license that I worked under, which is a terrible
11 operating and emergency procedure because they don't address
12 a lot of situations you come across as a radiographer.

13 If I was to write up a license, it would address
14 these things and it would be addressed in such a way as
15 these people would -- I know would find it more than
16 acceptable. In fact, I have a radiation safety program
17 wrote up and incorporated into a license and things like
18 this. So I don't know.

19 MR. MANLY: This completes the list of things that
20 we had talked about. Is there anything else that you want
21 to talk about to complete your testimony?

22 THE WITNESS: I can't think of anything.

23 JUDGE COTTER: Do you want to cross examine, Mr.
24 Bachmann?

25 MR. BACHMANN: The staff has no cross examination.

1 JUDGE FOSTER: I have a few. Mr. Murray, you
2 spent a lot of time with the Navy.

3 THE WITNESS: Yes, sir.

4 JUDGE FOSTER: Part of that as a radiographer.

5 THE WITNESS: Yes, sir.

6 JUDGE FOSTER: What kind of operating procedures
7 did they have? Did they rely almost exclusively on Part 20
8 or 10 CFR Part 20 and Part 30 or did they have their own
9 rules and regulations? What were the groundrules that you
10 were working under when you were with them?

11 THE WITNESS: Well, yes. They come under the 10
12 CFR Parts 19, 20, 21, 30 and 31 -- 34, excuse me. The
13 difference is while the -- you might want to correct me in
14 this. The military has an all-encompassing type license
15 where they control themselves and answer to you through
16 RASO, is that it? I think it's RASO.

17 MR. LIEBERMAN: I don't know the name of the
18 organization, but there is a Radiation Safety Overview
19 Committee within the Navy that runs the Navy program.

20 THE WITNESS: Okay. The difference -- they're
21 real specific. They're step-by-step, how you crank out,
22 count the number of turns, they're real specific, much more
23 specific than this or any other license you'll see. They're
24 very specific and very, very detailed.

25 JUDGE FOSTER: Do you recall what they had as far

1 as the designation and posting of the radiation zones? Did
2 they require roping and things of this sort?

3 THE WITNESS: Because you're working on ships,
4 they didn't -- there's a lot of situations where -- well, in
5 particular, sub-bases was my last duty station. So on a
6 nuclear submarine, it's easy to secure doors and things like
7 this. So you tape up, secure doors, and tape your signs on
8 these doors and plus they have an intercom system where they
9 warn the crew and they secure that area for you. So roping
10 is not necessarily required in the military. They have it.
11 Yes, they have it, but in a lot of situations, they don't --
12 it's impractical.

13 JUDGE FOSTER: When you left the Navy, was this
14 job with Fewell the first time that you had been a civilian
15 type radiographer?

16 THE WITNESS: Yes. While I was in a sub-base, I
17 never -- well, I was only -- we rarely used a source, which
18 is -- I mean, we get trained and trained on NRC rules and
19 regulations, but your hands-on experience is almost none. I
20 recall only two times in the three years that I was there
21 that we took the source out on a ship at all.

22 So when I came out, I was a bartender for a little
23 while. I was going to go to school for radiology in the
24 medical field. So it was about a year-and-a-half or two
25 years after I got out that I got on Dick Fewell's license

1 and then started performing radiography again.

2 JUDGE FOSTER: So with Fewell's license, was that
3 the first time that you had really been working under a
4 license that had this type of operating procedures?

5 THE WITNESS: Yes.

6 JUDGE FOSTER: And emergency procedures.

7 THE WITNESS: Absolutely.

8 JUDGE FOSTER: All right. You mentioned working
9 for Finley. Was that as a radiographer or what were your
10 duties there?

11 THE WITNESS: Radiographer, primarily. I did some
12 ultrasonics and other, but pretty much most of it's
13 radiography. With Gordon, you know, naturally he has to use
14 an x-ray tube because he's not allowed to use the source.

15 JUDGE FOSTER: And you still are a radiographer on
16 Finley's license?

17 THE WITNESS: He doesn't have a -- with the x-ray,
18 you don't have to have a license.

19 JUDGE FOSTER: All right. He's not using a
20 byproduct source, then.

21 THE WITNESS: No, he's not.

22 JUDGE FOSTER: My other question was that you did
23 continue to use x-ray.

24 THE WITNESS: Yes. Yes.

25 JUDGE FOSTER: -- source, which does not come

1 under the NRC's purview.

2 THE WITNESS: I would wear the same film badge, in
3 fact, if I was doing x-ray with Finley or whether I was
4 doing gamma radiography with Fewell. I would still keep the
5 same film badge to keep my exposures on one record.

6 JUDGE FOSTER: All right. Thank you.

7 JUDGE LAM: Mr. Murray, in your earlier testimony,
8 you indicated you're anxious to regain the confidence of the
9 NRC staff. What action are you willing to take to provide
10 additional assurances to the staff that you will not commit
11 the violations that you admit to in the future?

12 THE WITNESS: Other than what I had said earlier
13 about offering to let them know where I am each and every
14 day, naturally they can't be out here every day, but they'll
15 know where I am in case they want to come and show up. They
16 don't have to tell me they're coming. They can at any time
17 come and spot me or I can employ Phil here, who is a
18 radiation physicist, to come out and every so often come out
19 on his own and inspect me and make reports to the NRC.

20 I can get someone else to do it. I've thought
21 about this a lot, how I could, in fact, regain the
22 confidence of these people and there's not very many things
23 I can come up with other than Phil and letting them know
24 where I am and just giving them my word that my attitude
25 isn't what it was prior to them coming out on this job site

1 and inspecting me.

2 JUDGE LAM: So far, what would the estimate be of
3 your monetary losses that you've suffered so far?

4 THE WITNESS: About -- let's see. The monetary
5 losses right now are, I'll say, at a minimum, \$800 to \$1,600
6 a month. I know that sounds like a lot, but a lot of this
7 gamma radiography goes on at night at overtime type hours.
8 So without being on the license, without being able to do
9 this type of radiography, I'm getting just full-time hours
10 with Finley and he's already brought in a new radiographer.
11 So right now I'm just -- as opposed to before, I'm just --
12 I'm not the radiographer of his anymore. I'm just a
13 radiographer.

14 And since he pays me, and he does pay me about \$18
15 an hour, it's easy for him to bring in other people now and
16 do it for less money. You call in to California and say,
17 hey, I have a job here in Hawaii, especially under the
18 conditions with this war going on. My job right now is in
19 jeopardy. I really think I'm going to lose my job at Finley
20 Laboratories. I truly do.

21 To put it in a nutshell, I'm not as marketable as
22 an NDT, an all-around NDT inspector as I was before this had
23 happened. Philip said, oh, you can go out and do NDTs, but
24 that is just -- the bulk of NDT is everyone wants engineers
25 -- they want radiography. They want to see the inside of a

1 plane, the inside of a pipe, the ship, what have you. They
2 don't want some subjective tests, like an ultrasound. They
3 want to see results. They want to see that film.

4 So a lot of people call for it and a lot of it
5 calls for gamma radiography. X-ray is restricted. You have
6 a bit electronic component that you've got to haul around
7 and it's real restrictive. People are not going to call you
8 for very long when they know someone on the island has a
9 source and they can do it faster and for less money.

10 JUDGE COTTER: Any other questions for Mr. Murray?

11 MR. BACHMANN: The staff has no further questions.

12 JUDGE COTTER: Thank you, Mr. Murray. Is there
13 anything further that you wanted to present?

14 THE WITNESS: No. I think all that needs to be
15 said has been said, sir.

16 JUDGE COTTER: All right.

17 [Witness excused.]

18 JUDGE COTTER: Do you have anything further to
19 present, Mr. Bachmann?

20 MR. BACHMANN: Let me confer for a moment.

21 JUDGE COTTER: We'll go off the record.

22 [Counsel for NRC conferring off the record.]

23 JUDGE COTTER: Back on the record.

24 MR. BACHMANN: The staff will not be presenting
25 any additional rebuttal testimony.

1 JUDGE COTTER: I'm sorry?

2 MR. BACHMANN: We will not be presenting rebuttal
3 testimony.

4 JUDGE COTTER: Then that concludes the
5 presentation of the respective cases, then.

6 MR. BACHMANN: Yes, sir.

7 JUDGE COTTER: I think we have dealt with all the
8 exhibits, have we not? Let's go off the record for a
9 moment.

10 [Discussion off the record.]

11 JUDGE COTTER: In the discussion off the record,
12 the parties and the Board have agreed on the following
13 briefing schedule. The staff's brief will be due March 8.
14 Mr. Murray will respond by March 22 and the staff will have
15 a work week after its receipt of Mr. Murray's answer to
16 respond to his answer, if they decide they want to. If not,
17 they will notify the Board that they will not respond.

18 Of course, Mr. Murray, you have an obligation of
19 sending your answer to their brief, when you send it to the
20 Board, you send a copy to the staff.

21 MR. MURRAY: And you gentlemen, also.

22 JUDGE COTTER: That's right. I want to thank
23 everyone, the witnesses and the parties, for doing a good
24 job and presenting a clear case. I don't see it as an easy
25 case. I think it's a difficult one. It's obviously an

1 important one in more ways than one.

2 With that, we will close the hearing.

3 [Whereupon, at 6:16 p.m., the hearing was
4 concluded.]

REPORTER'S CERTIFICATE

This is to certify that the attached proceedings before the United States Nuclear Regulatory Commission

in the matter of:

NAME OF PROCEEDING: Fewell Geotechnical Engineering

DOCKET NUMBER: 030-30870-)M

PLACE OF PROCEEDING: Honolulu, Hawaii

were held as herein appears, and that this is the original transcript thereof for the file of the United States Nuclear Regulatory Commission taken by me and thereafter reduced to typewriting by me or under the direction of the court reporting company, and that the transcript is a true and accurate record of the foregoing proceedings.

Fewell Geotechnical Engineering, Ltd.
ATTN: Mr. Richard B. Fewell
President
96-1416 Waihona Place
Pearl City, Hawaii 96782

Dear Sir:

SUBJECT: ORDER MODIFYING LICENSE (EFFECTIVE IMMEDIATELY)

The enclosed Order is being issued based on observation of personnel of one of your radiographers willfully violating NRC requirements for radiographic operations on October 23 and 25, 1990. The Order prohibits the utilization of this individual in NRC licensed activities for a period of three years from the date of the Order.

The NRC investigation into this matter is continuing. Any enforcement action will be the subject of separate correspondence.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and the enclosure will be placed in the NRC's Public Document Room.

Sincerely,

Hugh L. Thompson, Jr.
Deputy Executive Director for
Nuclear Materials Safety, Safeguards,
and Operations Support

Dear Sir:

SUBJECT: ORDER MODIFYING LICENSE (EFFECTIVE IMMEDIATELY)

The enclosed Order is being issued based on observations by NRC personnel of your conduct of radiographic operations in willful violation of NRC requirements on October 23 and 25, 1990. The Order prohibits Fewell Geotechnical Engineering, Ltd, from utilizing you in NRC licensed activities for a period of three years from the date of the Order.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and the enclosure will be placed in the NRC's Public Document Room.

Sincerely,

A handwritten signature in cursive script, appearing to read "Hugh L. Thompson Jr.", written over the typed name.

Docket No. 030-30870
License No. 53-23268-01
EA 90-190

ORDER MODIFYING LICENSE
(EFFECTIVE IMMEDIATELY)

1

Fewell Geotechnical Engineering, Ltd. (FGE or Licensee) is the holder of Byproduct Material License No. 53-23288-01 issued by the Nuclear Regulatory Commission (NRC or Commission) pursuant to 10 CFR Part 34. The license authorizes the Licensee to receive, possess, and utilize sealed sources of Iridium 192 in industrial radiographic exposure devices. The license was issued on January 26, 1989, was most recently amended on September 29, 1989, and is due to expire on January 31, 1994.

11

Under 10 CFR 20.105 and 20.201 and under FGE License Condition 15 on page 3 of the license and FGE Operating and Emergency Procedures ("OEP"), personnel performing licensed activities under FGE's license are required to conduct radiation surveys to establish the boundaries of restricted areas (OEP Section IV, Paragraph 2.5). In addition, during radiographic operations, personnel are required to determine that the sealed source is returned to the fully shielded position after each source exposure (10 CFR 34.43(b); OEP Section IV, Paragraph 2.6), to secure the sealed source assembly in the shielded position after each source exposure (10 CFR 34.22(a); OEP Section IV,

Paragraph 2.6), to post and rope off the 2mR/hr boundary (OEP Section IV, Paragraphs 2.2 and 2.5), and to prevent entry into the restricted area of individuals other than radiographers and radiographers' assistants (OEP Section I, Paragraph 5; OEP Section IV, Paragraph 2.5). Finally, information provided to the NRC by licensee personnel must be complete and accurate in all material respects (10 CFR 30.9).

Thomas E. Murray, a radiographer for the Licensee, has been a radiographer since December 1987, having satisfied the experience, training, and examination requirements of at least two NRC licensees (the U.S. Navy and FGE). In accord with 10 CFR 34.31, examinations by NRC licensees must include demonstrations by radiographer candidates evidencing their understanding of NRC requirements, including licensee operating and emergency procedures. During an NRC inspection conducted on October 4, 1990, Mr. Murray demonstrated a thorough understanding of proper procedures for surveys, source securing, and control of access into restricted areas.

An NRC investigator and an NRC inspector observed Mr. Murray, conduct radiographic operations on October 23 and 25, 1990 at Campbell Industrial Park, Oahu, Hawaii, contrary to the above-referenced NRC requirements as follows:

- (1) on October 25, 1990, Mr. Murray conducted radiographic operations without performing surveys to establish the radiation boundary;

- (2) on October 23 and 25, 1990 Mr. Murray failed to rope off any portion of the radiation boundary, and failed to post signs for most of that boundary;
- (3) on October 23, 1990, on at least 12 occasions and on October 25, 1990, on at least 5 occasions, Mr. Murray failed to perform surveys of the exposure device to determine that the sealed source had been returned to its shielded position after radiographic exposures;
- (4) on October 25, 1990, Mr. Murray failed to secure the radiographic source in the fully shielded position after each of several source exposures;
- (5) on October 23, 1990, Mr. Murray failed to prevent entry into the restricted area of individuals other than radiographers and radiographers' assistants.

On October 25, 1990, Mr. Murray was asked by NRC personnel whether, during the NRC-observed operations of October 23 and 25, he had complied with the above-referenced NRC requirements for the conduct of surveys to assure that the source had been retracted to its fully shielded position, for the securing of the source in the shielded position after each exposure, and for preventing the entry of unauthorized personnel into the restricted area. He stated that he

had complied and also demonstrated to the NRC personnel the survey procedures he stated that he had used on those occasions, i.e., conducting a survey with a survey meter as he approached the radiographic exposure device, and circumferentially surveying the device with a survey meter. This demonstration again showed that he had a thorough understanding of Commission requirements.

III

It appears that Mr. Murray's actions were willful because he was experienced, trained, and knowledgeable concerning NRC and Licensee requirements pertaining to surveys, to securing the source in the fully shielded position after each source exposure, and to preventing unauthorized entry into a restricted area, and because he repeatedly failed to comply with these requirements on at least two days in one week. In addition, Mr. Murray gave the NRC false information concerning his actions, contrary to the observations of two NRC employees. Therefore, the NRC has concluded that this false information was also provided willfully. As a result of these willful violations, the NRC does not have reasonable assurance that Mr. Murray will comply with regulatory requirements. Moreover, Mr. Murray's willful violations of Commission requirements cannot be tolerated.

Consequently, I lack the requisite reasonable assurance that, with Mr. Murray's involvement, the Licensee's current operations under License No. 53-23288-01 can be conducted in compliance with the Commission's requirements and that the

health and safety of the public, including the Licensee's employees, will be protected. Therefore, the public health, safety, and interest require that License No. 53-23288-01 be modified to prohibit the utilization of Mr. Thomas E. Murray in licensed activities. Furthermore, pursuant to 10 CFR 2.204, I find that the public health, safety, and interest require that this Order be immediately effective.

IV

Accordingly, pursuant to Sections 81, 161b, 161c, 161f, 161o, 182 and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.204 and 10 CFR Part 34, IT IS HEREBY ORDERED, EFFECTIVE IMMEDIATELY, THAT LICENSE NO. 53-23288-01 IS MODIFIED AS FOLLOWS:

Fewell Geotechnical Engineering, Ltd., shall not utilize Mr. Thomas E. Murray in any licensed activities, including, but not limited to, activities performed by radiographers, radiographers' assistants, and helpers, for a period of three years.

The Regional Administrator, Region V, may relax or rescind, in writing, any of the above condition; upon a showing of good cause by the Licensee.

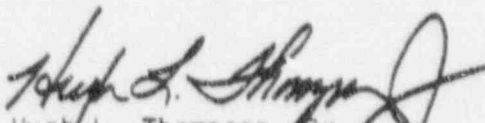

The Licensee, Mr. Thomas E. Murray, or any other person adversely affected by this Order may submit an answer to this Order or request a hearing on this Order within twenty days of the date of this Order. The answer shall set forth the matters of fact and law on which the Licensee, Mr. Thomas E. Murray, or other person adversely affected relies, and the reasons as to why the Order should not have been issued. Any answer filed within twenty days of the date of this order may include a request for a hearing. Any answer or request for a hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, ATTN: Chief, Docketing and Service Section, Washington, D.C. 20555. Copies also shall be sent to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, to the Assistant General Counsel for Hearings and Enforcement at the same address, to the Regional Administrator, NRC Region V, 1450 Maria Lane, Suite 210, Walnut Creek, California 94596, and to the licensee if the answer or hearing request is by a person other than the licensee. If a person other than the licensee or Mr. Thomas E. Murray requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this Order and shall address the criteria set forth in 10 CFR 2.714(d).

If a hearing is requested by the licensee, Mr. Thomas E. Murray, or any other person whose interest is adversely affected, the Commission will issue an

Order designating the time and place of any hearing. If a hearing is held, the issue to be considered at the hearing shall be whether this Order should be sustained.

Upon the Licensee's and Mr. Murray's consent to the provisions set forth in Section IV of this Order, or upon failure of the Licensee and Mr. Murray to file an answer within the specified time, and in the absence of any request for hearing, the provisions specified in Section IV above shall be final without further Order or proceedings. AN ANSWER OR A REQUEST FOR HEARING SHALL NOT STAY THE IMMEDIATE EFFECTIVENESS OF THIS ORDER.

FOR THE NUCLEAR REGULATORY COMMISSION

MATERIALS LICENSE

Amendment No. 1

Pursuant to the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974 (Public Law 93-438), and Title 10, Code of Federal Regulations, Chapter I, Parts 30, 31, 32, 33, 34, 35, 40 and 70, and in reliance on statements and representations heretofore made by the licensee, a license is hereby issued authorizing the licensee to receive, acquire, possess, and transfer byproduct, source, and special nuclear material designated below; to use such material for the purpose(s) and at the place(s) designated below; to deliver or transfer such material to persons authorized to receive it in accordance with the regulations of the applicable Part(s). This license shall be deemed to contain the conditions specified in Section 183 of the Atomic Energy Act of 1954, as amended, and is subject to all applicable rules, regulations and orders of the Nuclear Regulatory Commission now or hereafter in effect and to any conditions specified below.

Licensee		In accordance with letter dated September 12, 1989	
1. Fewell Geotechnical Engineering, LTD		3. License number	53-23288-01 is amended in its entirety to read as follows:
2. 96-1416 Waihona Place Pearl City, Hawaii 96782		4. Expiration date	January 31, 1994
		5. Docket or Reference No.	030-30870
6. Byproduct, source, and/or special nuclear material	7. Chemical and/or physical form	8. Maximum amount that licensee may possess at any one time under this license	
A. Iridium 192	A. Amersham Model 68309 sealed sources	A. Not to exceed 100 curies per source	
B. Iridium 192	B. Gamma Industries Model A-1-A sealed sources	B. Not to exceed 100 curies per source	
C. Iridium 192	C. Amersham Model A424-9 sealed sources	C. Not to exceed 100 curies per source	
D. Cesium 137	D. Amersham Model 77032 sealed sources	D. Not to exceed 165 millicuries per source	

9. Authorized use
- A. For use in Amersham Model 683 exposure devices for industrial radiography and in Amersham Model 750 source changers for storage and replacement of sources.
 - B. For use in Gamma Industries Model Century exposure devices for industrial radiography and in Gamma Industries Model C-10 source changers for storage and replacement of sources.
 - C. For use in Amersham Model 660 exposure devices for industrial radiography and in Amersham Model 650 source changers for storage and replacement of sources.
 - D. For use in Amersham Model 773 calibrators for calibration of instruments.

**MATERIALS LICENSE
SUPPLEMENTARY SHEET**

License no.	53-23288-01
Docket or Reference number	030-30870
Amendment No. 1	

CONDITIONS

- 10. Licensed material may be stored at 96-1416 Waihona Place; Pearl City, Hawaii and may be used at temporary job sites of the licensee anywhere in the United States where the U. S. Nuclear Regulatory Commission maintains jurisdiction for regulating the use of licensed material.
- 11. The individuals listed below are the only persons authorized by this license to act as radiographers or radiographers' assistants as defined in 10 CFR 34.2:

Radiographers

Radiographers' Assistants

Gary Martin
Thomas E. Murray

None

- 12. The Radiation Safety Officer for activities conducted under this license is Gary Martin.
- 13. A. Notwithstanding the periodic leak test required by 10 CFR 34.25(b), such requirement does not apply to radiography sources that are stored and not being used. The sources excepted from this test shall be tested for leakage before use or transfer to another person.
B. Sealed sources authorized for a use other than radiography shall be tested as radiography sources in accordance with 10 CFR 34.25.
- 14. The licensee is authorized to receive, possess, and use sealed sources of iridium 192 or cobalt 60 where the radioactivity exceeds the maximum amount of radioactivity specified in this license provided:
 - A. Such possession does not exceed the quantity per source specified in Item 8 by more than 20% for iridium 192 or 10% for cobalt 60;
 - B. Records of the licensee show that no more than the maximum amount of radioactivity per source specified in this license was ordered from the supplier or transferor of the byproduct material; and
 - C. The levels of radiation for radiographic exposure devices and storage containers do not exceed those specified in 10 CFR 34.21.
- 15. Pursuant to 10 CFR Part 40, "Domestic Licensing of Source Material", the licensee is authorized to possess, use, transfer, and import up to 999 kilograms of uranium contained as shielding material in the radiography exposure devices and source changers authorized by this license.
- 16. The licensee may transport licensed material in accordance with the provisions of 10 CFR Part 71, "Packaging and Transportation of Radioactive Material".

RE: Docket No. 030-30870
Control No. 70854

Gentlemen:

Enclosed for your review is a resubmittal of the items referenced in Docket No. 030-30870.

We will be contacting Mr. Leonard Gordon in Washington, D.C. regarding the Quality Assurance Program.

If you need any additional information, please do not hesitate to contact us.

Respectfully submitted,

ITEM 6

The licensed material will be used for industrial radiography and source changes and survey meter calibration. Survey meter calibration will be for in-house meters only.

ITEM 7

Gary Martin will be the designated Radiation Safety Officer and will be responsible for the radiation safety program and training of radiographers and radiographer

assistants.

Initial radiographer certification - 1963 at X-Ray Engineering Company, 2825 Koapaka Street, Honolulu, Hawaii.

Employed as radiographer and Radiation Safety Officer for the following:

X-Ray Engineering Co., 2825 Koapaka Street, Honolulu, Hawaii - 10-63 to 12-64

Industrial Testing and Inspection Co., 2825 Koapaka Street, Honolulu, Hawaii - 12-64 to 9-69

Aerojet Nuclear, Idaho Falls, Idaho - 9-69 to 12-72

Pittsburgh Testing Labs., Pittsburgh, Pennsylvania - 4-73 to 11-74

Pittsburgh Testing Labs., Honolulu, Hawaii - 10-76 to 12-78

Construction Engineering Consultants, Laughlintown, Pennsylvania - 12-78 to 1985

Barbara Fair will be certified as a radiographer, initial radiographer certification -
December 1982 at U.S. Navy Service School Command, San Diego, California.

Employed as radiographer - U.S. Navy - 12-82 to 2-85

Welashek Enterprises, Pier 1, Honolulu, Hawaii - 4-85 to 4-86

Finlay Testing Labs., 99-940 Iwaena Street, Aiea, Hawaii - 7-86 to 9-87
C & R Testing, 2248 Aumakus Street, Pearl City, Hawaii - 4-88 to present

ITEM 8

Training shall be conducted by Gary Martin, R.S.O, in accordance with the attached
training program.

ITEM 9

All radiography will be performed at temporary job sites.

ITEM 10

See attached "Safety Program" and "Operating and Emergency Procedures".

ITEM 11

All radioactive material will be disposed of by returning to the original supplier
or other specific licensee authorized to possess the licenced material.

SECTION I
General Safety Rules

- 1.0 Prior to performing any operations with radioactive material, each radiographer and radiographers assistant must be wearing a personnel dosimeter and film badge.
- 2.0 Dosimeters shall be charged prior to use.
- 3.0 A calibrated and operational survey meter shall be in use during all operations involving radioactive material.
- 4.0 Radiographers assistants shall be under the direct supervision of a radiographer when performing tasks associated with radiographic material.
- 5.0 Only radiographers and radiographers assistants shall be permitted inside the 2 Mr/Hr boundary.
- 6.0 The radioactive material shall always be under the direct surveillance and control of the radiographer unless it has been positively secured to prevent unauthorized use.

SECTION IV
Radiographic Operations

1.0 Preparation for Travel to Job Site

- 1.1 Observe the requirement of Section II and Section III.
- 1.2 Inspect radiographic equipment and complete applicable parts of daily utilization log.
- 1.3 Assure that all safety equipment is available
 - a. Personnel dosimeter and film badge
 - b. Survey meter
 - c. Ropes and signs

2.0 Job Site Operations

- 2.1 Advise job supervisory personnel that radiography is to take place.
- 2.2 Establish the radiation boundary with ropes and radiation area signs.
- 2.3 Bring exposure device outside the radiation area and connect guide tube and control cable.
- 2.4 Assure that no one is in the radiation area.
- 2.5 Expose the source and conduct a survey of the radiation boundary. Move the boundary as required to establish the 2mR/hr boundary. After the 2mR/hr boundary has been established and verified, post the high radiation area. Use the inverse square law to determine the high radiation area. Maintain surveillance to prevent unauthorized entry into the radiation area.

- 2.6 Immediately following each exposure, the following steps are to be taken:
 - a. Check dosimeter
 - b. Survey all sides of the exposure device and the guide tube
 - c. Lock the exposure device
- 2.7 When radiography has been completed, disconnect the guide tube and control cables. Remove all ropes and signs and advise job site personnel that radiography is finished.
- 2.8 On returning to the storage site, perform a survey of the exposure device on all sides and return to storage vault. After storing, perform a survey on the sides and top of the storage vault.
- 2.9 Complete the daily utilization log.

Re: Docket No. 030-30870
License No. 53-23288-01

Gentlemen:

Enclosed for your review is the radiographic training and experience background of Mr. Thomas E. Murray, Social Security No. 109-50-2373. We hereby request that he be added to our material license as a radiographer. We have enclosed a \$230.00 check to cover the amendment fee per 10CFR 170 Part 170.31(30).

If you need any additional information, please do not hesitate to contact us.

THOMAS E. MURRAY

802 Prospect Street #601
Honolulu, Hawaii 96813

June 1978 - December 1980

Navy, U.S.S. Fulton AS-11 New London Ct.

Duties: Fireparty Team Member, Sheetmetal Journeyman.
Fabricated sheetmetal ducting, cabinets and various
renewations on Nuclear Submarines.

January 1981 - June 1981

Attended Non-Destructive Testing School. San Diego
Naval Base Service School Command. 360 hrs. of Visual
Penetrant and Magnetic Particle Test Methods.

80 hrs. of Radiation Safety, NRC Rules and Regulations
and proper handling of Radioactive Isotopes.

320 additional hrs. of Radiography Training, Film
Developing and Safe Handling of Radioactive Isotopes and
X-Ray Units.

Graduated #2 in a class of sixteen.

June 1981 - December 1984

U.S.S. Hector AR-7 San Francisco, California.

Duties: Qualified after approximately 160 hrs. of
Radiographer Assistant training as a Radiographer. Also
qualified VT, MT, PT and attended five weeks of Radiographer
Inspector Training at Naval Station School Command
San Diego during October 1982.

Performed NDT Services on Surface Ships home ported in
the San Francisco Bay area. Supervised NDT Lab from
November 1983 to November 1984. Acted as Senior Radiographer
and maintained NRC records and training.

February 1985 - November 1985

Pittsburgh Testing Laboratories, Emeryville, California

Duties: Spent approximated 360 hrs. as a Radiographer
Assistant in the field of utilizing IR192. Qualified
Radiographer and performed field Radiography regularly.

Page 2

Worked on PG&E Oil Pipelines, Nitrogen Pipeline in Sunnyvale area, aircraft, structural steel, concrete, military explosives and welder qualifications. Other duties were soil inspections, concrete inspections and weld inspections. Qualified as VT, MT, PT Inspector and RT operator/inspector.

April 1986 - February 1989

Navy - Sub-base NDT Lab Pearl Harbor Hawaii

Duties: Nuclear and Non-Nuclear Radiographer VT, MT, PT Inspector, Ultrasonic Thickness and Silverbraze. Selected in October 1986 for Divisional and Work Center Training Petty Officer in charge of Training Lectures, Documentation and Scheduling. Train Personnel in Radiation Safety with Sub-base RSO (approximately 4 hrs. per week classroom and 8 hrs. of Practical Training). Acquired more than 400 hrs. of sub-base Radiation Safety Training before being certified as RT Operator. Other responsibilities were Radiation Worker for sub-base, Quality Assurance Inspector for NDT Lab.
