Mail Station 3H5

Dear Ms. Wright:

Please find enclosed B&W Fuel Company's export license application for eight (8) rod cluster control assemblies (RCCA's). These RCCA's are being shipped to France for installation in an Electricité de France (EDF) commercial pressurized water reactor. As stated in Section 25 of the application, EDF has not yet determined when they will install these RCCA's, or in which commercial PWR they will install them. The intermediate consignee, Framatome Fuel Division, has purchased these RCCA's as a potential new product to offer to their customer, EDF. Framatome will perform a receipt inspection on the RCCA's and will deliver them to EDF's storage facility (Section 11 of the application) upon their arrival in France. The shipment date is March 15, 1991.

The information contained in the export license is complete to the best of our knowledge; however, if we can be of further assistance in processing this application, please do not hesitate to contact me at (804) 385-3208.

Sincerely,

H. A. Hassan
