NPF-7

Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION
SUPPLEMENTAL RESPONSE TO GENERIC LETTER 82-10
NUREG-0737 ITEMS I.A.1.3 AND II.D.1

This letter will provide the status of Item I.A.1.3 (Minimum Shift Crew and Overtime Restrictions) and a completion schedule for Item II.D.1 (Safety and Relief Valve Performance Testing) for the North Anna Power Station. The information contained herein is intended to supplement our response to Generic Letter 82-10 dated June 30, 1982 (Serial No. 387).

The subject of overtime restrictions is addressed in NUREG-0737, Item I.A.1.3. The requirements of Item I.A.1.3 are currently incorporated in the North Anna Technical Specifications. However, Generic Letter 82-12 dated June 15, 1982 superceded the requirements of Item I.A.1.3. Accordingly, a Technical Specification change request which addresses overtime policies has been submitted to the NRC for review and approval. In general, the requirements of Generic Letter 82-12 are less restrictive than the requirements currently in the North Anna Technical Specifications. Therefore, Vepco intends to implement the overtime policy of Generic Letter 82-12 by administrative procedure upon NRC approval of Vepco's proposed Technical Specification change.

Item II.D.1 addresses Safety and Relief Valve Performance Testing. Our response to Generic Letter 82-10 did not clearly identify a completion date for this item for North Anna Unit 1. The majority of information required by II.D.1 has been submitted for NRC review. The evaluation of safety and relief valve piping and supports has not yet been submitted since this work is still in progress. Vepco's plans for completion of these piping evaluations are provided in our response to Generic Letter 82-10. These plans call for a completed evaluation on a single lead unit (which is North Anna Unit 2) by the end of 1982. At that time, the plant-specific piping evaluations for the remaining Vepco units will be initiated using information and guidance from the North Anna Unit 2 evaluation. It is anticipated that through this course of action, the North Anna Unit 1 plant-specific piping evaluations will be completed and submitted by December, 1983.

Very truly yours,

W. L. Stewart
