Attn: Document Control Desk  
Washington, DC 20555

Dear Sir:

Subject: Three Mile Island Nuclear Station, Unit 1 (TMI-1)  
Operating License No. DPR-50,  
Docket No. 50-289  
Refueling Interval 8R Once Through Steam  
Generator (OTSG) Tube Inspection Report

Technical Specification (TS) section 4.19.5.b requires that the complete results of each inservice inspection of OTSG tubes be reported to the NRC within 12 months following completion of the inspection.

GPUN performed eddy current examinations of the OTSG tubing during refueling interval 8R and during the unscheduled shutdown designated 8U1. These examinations were completed during February and March 1990, respectively.

Attachment 1, "Report on the 1990 Eddy Current Examinations of the TMI-1 OTSG Tubing," fulfills the requirements of the above cited Technical Specification for the examinations identified above.

Sincerely,

T. G. Broughton  
Vice President and  
Director, TMI-1
