Subject: Arkansas Nuclear One - Unit 2
Docket No. 50-368
License No. NPF-6
Gaseous Activity for Purge and Exhaust Isolation
Technical Specifications Change Request

Gentlemen:

Attached for your review and approval are proposed Technical Specifications changes revising Table 3.3-6 and 4.3-3 of the ANO-2 Technical Specifications to require the Process Monitors for gaseous activity for Purge and Exhaust Isolation be operable when the monitors are actually in use rather than during all modes.

In accordance with 10CFR50.91(a)(1), and using the criteria in 10CFR50.92(c), Entergy Operations has determined that the change involves no significant hazards consideration. The basis for these determinations are included in the enclosed submittal. Although the circumstances of this proposed amendment is not exigent or emergency, your prompt review and approval is requested to eliminate the expenditure of resources on unnecessary surveillance activities when the system is not required to be operable.

We request that the effective date for this change be 30 days after NRC issuance of the amendment to allow for distribution and procedural revisions necessary to implement this change.

Very truly yours,

NSC/sgw
