

Docket Nos. 50-295
50-304

NOV 19 1982

LICENSEE: Commonwealth Edison Company

FACILITY: Zion Station Unit Nos. 1 and 2

SUBJECT: MEETING SUMMARY - INSERVICE TESTING OF PUMPS AND VALVES

On November 15, 1982, a meeting was held between members of NRR staff, Region III staff and Commonwealth Edison Company to discuss the interim inservice testing (IST) program for Zion. The list of attendees is included as Enclosure 1.

The interim IST program has been under review by EG&G, our contractor, and the NRC staff. An interim report had been issued by EG&G in January 1981, Report No. EGG-EA-5117 Revision 1. That report served as a basis for discussions for the upcoming Zion IST 10 year program to be submitted to the NRC about June 1983 to become effective for both Unit Nos. 1 and 2 in December 1983.

The major concerns raised at the meeting included (1) adding some pumps that were not classified as "safety related" but could be shown to be important or related to safety, (2) adding pumps and valves that receive emergency power from other than class IE Emergency Busses (i.e., compressed air, steam, etc.), (3) threshold acceptance criteria for unfiltered hand held vibration monitors, (4) partial vs full stroking of valves, (5) testing of check valves, (6) test periods, and in general (7) bases for requests for testing relief. There were no conclusions drawn at the meeting which was held for the purpose of reaching and understanding with Zion on the current IST program requirement. In that regard, the meeting was successful.

Due to the pending submittal by the licensee in June 1983, the interim program to be further reviewed and modified by the licensee is sufficient for the remaining interim period. The staff will review the new 10 year program which, if it reflects the input from the meeting, should be fairly responsive to our IST requirements. As such, this meeting completes the Region III and NRR review of the Zion IST program under TAC #'s 11225 and 11226.
