Mr. Pete Garcia
U.S. Nuclear Regulatory Commission
Uranium Recovery and Licensing Branch
7915 Eastern Avenue
Washington, D. C. 20555

Dear Mr. Garcia:

I wish to confirm my understanding of our telephone conversation on November 2, 1982. My inquiry was motivated by my need to assure that Rio Algom's operating license will be extended in the event our Regulatory Guide 3.5 renewal document is delayed beyond our November 30, 1982 filing deadline.

I understand that providing we submit the NRC-2 form and license renewal fee by November 30, 1982, our finalized renewal document may be submitted after the filing deadline, but before our current license expiration date.

In addition, in light of our 1976 Final Environmental Statement (NuReg 0046), only a tabulation of summary data reflecting current operational effluent and environmental monitoring reports will be required as an appendix to the renewal document. This appendix will be sufficient to meet 10 CFR 51 requirements.

This letter is submitted to prevent misunderstandings as our renewal deadline approaches.

Sincerely,

B. L. Hardy
Radiation Safety Officer
