Gentlemen:

SUBJECT: NRC INSPECTION REPORT 50-445/90-45; 50-446/90-45

This refers to the inspection conducted by Mr. W. D. Johnson and other members of the Region IV staff during the period December 5, 1990, through January 15, 1991, of activities authorized for your Comanche Peak Steam Electric Station, Units 1 and 2. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection included plant status, operational safety verification, onsite followup of events, maintenance observation, surveillance observation, cold weather preparations, followup on previously identified items, followup on corrective actions for violations, and evaluation of Unit 2 activities. Within these areas, the inspection consisted of selective examination of procedures and representative records, interviews with personnel, and observation by the inspectors.

It was noted during this inspection that your self-assessment and corrective action activities were functioning well. This is evidenced by the identification and prompt initial resolution of the nonconservative assumption found in the overtemperature N-16 setpoint calculation and by the stop work order related to Unit 2 piping analysis activities.

Based on the results of this inspection, certain of your activities were in violation of NRC requirements. However, in accordance with Section V.G.1 of the NRC's Enforcement Policy, no citation is being issued for the violation described in paragraph 3 of the enclosed inspection report.

In accordance with 10 CFR 2.790 of the Commission's regulation, a copy of this letter and its enclosure will be placed in the NRC Public Document Room.
