of inaccessible pipe support hydraulic snubbers. The inspection cycle was based on the accelerated testing frequency required by section 4.11.D.1 of the Peach Bottom Technical Specifications as a result of two snubber failures stated to have occurred on April 23, 1982. Licensee's request for a temporary amendment to the Peach Bottom Unit 3 Operating License would extend the inspection interval identified in Section 4.11.D.1 of the Technical Specification until the refueling outage scheduled to start February 12, 1983.

Subsequent to the amendment submittal, a review of the snubber surveillance records by the Licensee revealed that the failure of the snubbers occurred on April 7, 1982. Licensee therefore, amends its October 19, 1982 application to request that the "April 23, 1982" date be changed to "April 7, 1982", and the "December 23, 1982" date be changed to "December 7, 1982". Temporary extension of the inspection interval to February 12, 1983 remains unchanged, and the justifications for the inspection interval as described in the October 19, 1982 amendment application are still valid.

The Plant Operation Review Committee and the Operation and Safety Review Committee have reviewed this Amendment to the October 19, 1982 Amendment Application, and have concluded that it does not involve an unreviewed safety question or a significant hazard consideration and will not endanger the health and safety of the public.

Respectfully submitted,

PHILADELPHIA ELECTRIC COMPANY
