Ivan Selin, Chairman
Nuclear Regulatory Commission
Washington, DC 20555

Dear Chairman Selin,

My name is Katrina McDow. I am currently attending St. Ann's Academy in P.C. I am writing you because I have a deep concern about the Louisiana Energy Services building a factory to produce enriched uranium in the black communities. As an African American I have a concern about where this plant is going to be built. First of all,

Why does this plant have to be built in the black communities of Louisiana? If you, as an educated human being were to be sued for such a thing, who would be blamed. It would also be inhumane for you to allow such a plant to be built near any humans.

I think that no race or people should have to be exposed to such harmful elements and especially the black race. It is purely inconsiderate on your part and L.E.S.'s. If this were to happen,

Also, think about the long term. Many people
could die because of the harmful elements and not
a plant is contributing to pollution and det-
rimenting our earth.

I ask you to re-consider your decision
on building the plant. It is very important
to me and many others. This is endangering
you as well as me in some way. Thank you
for your time.

Thank you

Yours Truly
Katrina McDowell
