Tulsa, Oklahoma 74107

Gentlemen:

This refers to the initial announced radiation safety inspection conducted by Mr. Richard A. Leonardi, Jr., of this office on January 10, 1991, of the activities authorized by NRC Byproduct Material License No. 35-27022-01, and to the discussion of our findings held by the inspector with members of your staff at the conclusion of the inspection.

The inspection was an examination of the activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, independent measurements, and observations by the inspector.

No violations or deviations were identified.

The inspector noted that your use of licensed material consisted of the use of one nuclear level gauge on a sulfuric acid glass column in the main processing facility. The device was properly labeled and adequate security was provided.

During the inspection, the NRC discussed with members of your staff: (1) the safety aspects of your licensed activities and compliance with regulatory requirements, (2) the NRC and DOT requirements, (3) the licensee's commitments made during the licensing process, and (4) the NRC enforcement policy.

Should you have any questions concerning this letter, we will be pleased to discuss them with you.

Sincerely,

Original signed by Larry A. Yandell for
