Gentlemen:

This is our written response to your Demand For Information regarding requirements of 10 C.F.R. 40.36. We feel this does not apply to us because of the following reasons. Our activities related to DU material is limited to the deposition of metal and metal compound coatings using a vacuum coating process. After coating, the DU is returned to the customer. No oxides are generated. Only solid DU material is coated.

We also performed a decommissioning at our old facility on June 9, 1989. Please reference letter dated June 12, 1989 and Amendment No. 03 to SUB - 1491. Any questions please call.

Sincerely,

George Wills
Process Engineer
