Docket No. 50-440

Centerior Service Company
ATTN: Mr. R. A. Stratman
Vice President
Nuclear - Perry
P.O. Box 97, S 270
Perry, OH 44081

Dear Mr. Stratman:

SUBJECT: PERRY SYSTEMS BASED INSTRUMENTATION AND CONTROL INSPECTION (SBICI)

I would like to inform you that the NRC will perform a systems based instrumentation and control inspection at the Perry Nuclear Power Plant, Unit 1. The onsite inspection activities are scheduled for the weeks of October 31, November 14, and November 28, 1994.

The inspection will assess design, operation, maintenance, surveillance, quality assurance, and corrective actions associated with instrumentation and control (I&C) systems. To accomplish its objectives, the SBICI team will review a broad range of information and activities for the I&C system loops selected. The inspection will be performed according to NRC Inspection Procedure 93807, "Systems Based Instrumentation and Control Inspection."

We would like to point out that NRC Inspection Procedure 40501, "Licensee Self-Assessments Related to Area-of-Emphasis Inspections," outlines the process for monitoring a licensee's self-assessment effort and for conducting a limited-scope, indepth inspection as an alternative to a full scope NRC inspection. Due to the difficulties in changing team inspections, we request that you notify this office by June 30, 1994, if you desire to implement this procedure. A copy of this procedure is available for review in the NRC resident inspector's office.

If you have any questions regarding the inspection, please contact me at (708) 829-9731.

Sincerely,

9405250012 940519
