## INFORMATION REQUIRED FOR ITEMS 15, 16 AND 17

Describe in detail the information required for Items 15, 16 and 17. Begin each item on a separate page and key to the application as follows:

- 15. RADIATION PROTECTION PROGRAM. Describe the radiation protection program as appropriate for the material to be used including the duties and responsibilities of the Radiation Protection Officer, control measures, bioassay procedures (if needed), day-to-day general safety instruction to be followed, etc. If the application is for sealed source's also submit leak testing procedures, or if leak testing will be performed using a leak test kit, specify manufacturer and model number of the leak test kit.
- 16. FORMAL TRAINING IN RADIATION SAFETY. Attach a resume for each individual named in Items 6 and 7. Describe individual's formal training in the following areas where applicable. Include the name of person or institution providing the training, duration of training, when training was received, etc.
  - a. Principles and practices of radiation protection.
  - b. Radioactivity measurement standardization and monitoring techniques and instruments.
  - Mathematics and calculations basic to the use and measurement of radioactivity.
  - d. Biological effects of radiation.
- 17. EXPERIENCE. Attach a resume for each individual named in Items 6 and 7. Describe individual's work experience with radiation, including where experience was obtained. Work experience or on-the-job training should be commensurate with the proposed use. Include list of radioisotopes and maximum activity of each used.

18. CERTIFICATE

(This item must be completed by applicant)

The applicant and any official executing this certificate on behalf of the applicant named in Item 2, certify that this application is prepared in conformity with Title 10, Code of Federal Regulations, Part 30, and that all information contained herein, including any supplements attached hereto, is true and correct to the best of our knowledge and belief.

WARNING.-18 U.S.C., Section 1001; Act of June 25, 1948; 62 Stat, 749; makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter, within its jurisdiction.

c. NAME (Type or print) Benjamin D. Pollack		
d. TITLE Corporate Clerk (Secretary)		

## Items 16 617

Mr. Fred Marcell and Mr. Benjamin Pollack each have more than 20 years experience in the production of compasses containing radium and promethium-147. In addition they have attended training sessions conducted by our consultant Mr. Murray M. Bolton, Jr. the Radiation Protection Officer at M.I.T. The following subject matter was covered at these training sessions:

Principles and practices of radiation protection.

Monitoring techniques.

Basic units.

Biological effects of radiation.

Regulations - State & Federal.

Although radium is no longer used at this facility, many years experience was gained in applying radium paint to compass parts and experience in handling radioactive materials.

## Item 15 - Radiation Frotection Program

Each shipment of compass parts is checked for contamination by our consultant Mr. Murray M. Bolton, Jr. If the shipment is found free of contamination, the units are released and the compass parts are assembled under the direct supervision of Mr. Fred Marcell. At the end of each work day, the work area is surveyed with the Eberline survey instrument (E-120 with HP 190 detector). In addition, monthly wipe tests are performed on the work area by our consultant. Wipes are taken only when promethium-147 is being handled. The wipe tests are counted at M.I.T. using a gas flow proportional counter that is calibrated with N.B.S. certified standards. It is also required that 1 % of the assembled compasses be wipe tested. Random samples are selected prior to packaging for shipment. Any compass or area found to be contaminated (greater than 25 dpm/wipe) is decontaminated to background levels.

If there is a need for bioassays, our consultant can and will supply this service.

All compass parts containing promethium-147 are stored in a locked cabinet. At the end of the work day, all promethium parts, not assembled, are returned to the storage cabinet. The compass parts containing promethium-147 are not handled with the fingers. Forceps are used.

Our operations are small. Mr. Marcell plus two additional employees assemble the compasses. The employees have been with Waltham Compass Corp. for many years and have received training in Radiation Safety from our consultant. If additional employees are required, they will receive a minimum of 5 hrs. training by our consultant prior to working with the promethium-147.
