Subject: Request for Additional Material - CANDU 3  
dated May 5, 1994

Dear Mr. Scaletti:

I am responding to the two types of information requested in the above mentioned letter.

First, re the request for a copy of the AECLT Quality Assurance Manual that governs the CANDU 3 design development: attached is an uncontrolled copy of the requested manual.

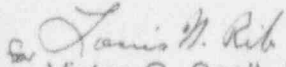

Second, re: items involving the information requested to support work subcontracted to Science and Engineering Associates, Inc. whose objective is to provide the staff with insights into the applicability of NUREG-0933: please be advised that the GSIs noted in NUREG-0933 are being addressed in Appendix B of the CANDU 3 SAR. The requested AECB document C-98 is in the package of AECB Regulations previously supplied to NRC. However another copy is attached. Of the other documents requested, we will transmit in the near future a number of documents which represent the current CANDU 3 design and which would be of use in this phase of the pre-application.
