## EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

On November 24, 1981, construction personnel severed a 2 inch line which branched off the water header supplying the CT-5 transformer fire suppression system. The suppression system was isolated, and a fire watch and backup fire suppression equipment were not provided as required by Technical Specification 3.1.7.3.1. The transformer CT-5 is a redundant emergency power supply, and the loss of the suppression system did not affect the operability of the transformer; thus the health and safety of the public were not affected by this event.

## CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

The cause of this incident is currently being investigated and will be reported in a revision to this report. Corrective action was to commence shutdown of Oconee 1 and 2, establish backup fire protection capability, and secure the unit shutdown, the leak was repaired and the fire suppression system returned to service.
