Congress of the United States  
House of Representatives  
Washington, DC 20515

April 24, 1994

Chairman Ivan Selin  
Nuclear Regulatory Commission  
11555 Rockville Pike  
Rockville, MD 20852

Dear Chairman Selin:

I would like to bring to your attention an issue of great concern to me and the people of northeastern Ohio. An accident at the Detroit Edison, Fermi II, plant near Monroe, Michigan, has led to the release of over 1.5 million gallons of contaminated water into Lake Erie.

Since learning of the planned release of water, I have been pushing to find answers to several questions that persist in the minds of the residents of northeast Ohio. Your response to these concerns would be greatly appreciated.

First of all, why did the accident at Fermi II occur in the first place and did Detroit Edison fail to follow any appropriate procedures to ensure safety?

Second, what actions has the NRC taken to ensure that similar events do not occur either at Fermi II or other power plants?

Third, why are there no other disposal options available to Detroit Edison other than dumping the contaminated water in to Lake Erie? We have worked so hard as a community to clean up our lake that an action such as this is very difficult to accept.

Fourth, have there been any studies on the effects of repeated low-level dumping on the Lake? I am concerned that a single release may be below any threat level, but in combination with other similar releases may aggregate within the lake to create levels that are unsafe. In short, is there the possibility for bio-accumulation of this waste within the food chain or in concentration within the water?

Finally, has the NRC considered the impact of releases similar to this one on communities that rely upon the Lake for their drinking water? Is there a disparate effect upon children relative to adults?

PDR

In order to explain the importance of this issue to my area I have included for your review copies of the petitions and letters that I have received from hundreds of constituents. Although Detroit Edison's actions may have been within the guidelines of the law, the people of northeastern Ohio who rely upon Lake Erie for their drinking water, recreation, and jobs need to be sure that this resource is safe. Your assistance in this effort is extremely important.

I appreciate your attention to these concerns and await your reply.

Sincerely,

A handwritten signature in cursive script that reads "Sherrod Brown". The signature is written in dark ink and is positioned to the right of the typed name.

Sherrod Brown  
Member of Congress

This is a petition for Sherrod Brown's office to look into the causes of the accident at Detroit Edison -- and what caused it, also to answer the following questions:

1. Why did the accident at Detroit Edison happen in the first place.
2. What are you doing to see that this type of accident doesn't happen again.
3. What options are there other than dumping contaminated water into Lake Erie, for the disposal of this material.

This is a petition for Sherrod Brown's office to look into the causes of the accident at Detroit Edison -- and what caused it, also to answer the following questions:

1. Why did the accident at Detroit Edison happen in the first place.
2. What are you doing to see that this type of accident doesn't happen again.
3. What options are there-other than dumping contaminated water into Lake Erie, for the disposal of this material.

This is a petition for Sherrod Brown's office to look into the causes of the accident at Detroit Edison -- and what caused it, also to answer the following questions:

1. Why did the accident at Detroit Edison happen in the first place.
2. What are you doing to see that this type of accident doesn't happen again.
3. What options are there-other than dumping contaminated water into Lake Erie, for the disposal of this material.

This is a petition for Sherrod Brown's office to look into the causes of the accident at Detroit Edison -- and what caused it, also to answer the following questions:

1. Why did the accident at Detroit Edison happen in the first place.
2. What are you doing to see that this type of accident doesn't happen again.
3. What options are there-other than dumping contaminated water into Lake Erie, for the disposal of this material.
