EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

[02] On January 24 with Unit 2 in Mode 3, our examination confirmed that continuing [03] alarms on the containment high range radiation monitor RI-7820 was defeating its [04] function. The monitor was fully operable, but the low alarm setpoint of the [05] monitor (i.e., 2 R/hr on a 1 to 1EB R/hr range) results in frequent alarm [06] activation. The objective of Technical Specification 3.3.3.1 was, therefore, not [07] met. The monitor's direct readout remains fully operable. There was no impact [08] on the health and safety of the plant personnel or the public. 90

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

[10] The two monitor channels are set to alarm at 2 R/hr. The monitors have an [11] internal source to maintain the monitor on scale. The 2 R/hr setpoint is too [12] close to the normal reading to prevent frequent alarm initiation from circuit [13] noise. A Tech. Spec. amendment will be submitted requesting the setpoint be [14] specified at a more appropriate value. 80
