Docket 50-293

Review of Data Supplied in Response to  
GL 92-01, Rev. 1, "Reactor Vessel Structural Integrity",  
Pilgrim Nuclear Power Station (TAC M83498)

Your letter dated March 29, 1994, regarding our response to Generic Letter 92-01, Rev. 1 requested we review and verify the information provided as attachments to the letter. No response was necessary unless inconsistencies were found. If no response was received within 30 days of the letter date, the NRC staff would consider the actions related to GL92-01, Rev. 1, to be complete. The data in the Reactor Vessel Integrity Database (RVID) would then be used by the NRC staff for future reviews related to structural integrity of the Pilgrim reactor vessel.

Based upon a preliminary review, no significant deficiencies were found. However, there appear to be some minor inconsistencies between the data we supplied and the data which appear in the database information. For this reason, a thorough review and verification is planned and will take more than the 30 days allowed. Verification will not be complete until late August due to other higher priority activities.

As discussed with Ron Eaton, our Project Manager, if you do not receive a response from Boston Edison by September 1, 1994 regarding data inconsistencies, the data can be considered accurate and Boston Edison will consider actions complete for GL 92-01, Rev. 1
