Dear Mr. Mattimoe:

As previously discussed with members of your staff, IAEA representatives would like to visit the Rancho Seco plant for an inspection on March 24 and 25, 1983. The IAEA representatives expect that by that time, all the reactor fuel would be transferred to the spent fuel pool.

The IAEA inspection will consist of:

1. Use of a night vision to identify discharged core fuel through Cherenkov glow. To do this inspection the inspectors will require that the lights in the area are switched off.
2. Identifying the fuel assemblies engraved end cap with the use of a Brookhaven periscope. As arranged with your staff the Brookhaven periscope will be shipped to your facility to the attention of Frank Lopez.
3. Service the surveillance system at the spent fuel pool and inside the containment.
4. Audit accounting and operating records up to a cut off date such as reactor shut down, or core unloading or the date when burnup and Pu decay calculations will be available.
