**EXERCISE  
SCENARIO  
GUIDE**

### Introduction

This document contains the necessary information as it relates to the objectives expected to be demonstrated during the annual emergency plan partial participation exercise at Connecticut Yankee on Saturday, May 14, 1994.

The Station and Corporate staffs will fully participate in this exercise. The State of Connecticut, and 18 local communities within the 10-mile radius Emergency Planning Zone (EPZ) of the Connecticut Yankee Plant, will also fully participate for FEMA evaluation. The Station and Corporate objectives for the exercise are outlined in Section A.3.0.

This scenario was developed by first determining the required as well as desired objectives that should be met. Secondly, a collection of events was assembled into a chronological order that would provide the necessary parametric data to meet these objectives. Subsequently, the scenario was run on the Connecticut Yankee training simulator in real time following prescribed plant procedures to capture the parameters at the time an action is taken, the exact time some events will occur is unpredictable.

Consequently, the timing of events contained in this scenario are based solely on the simulator generated data captured during development. Timing of events when the exercise is run on May 14, 1994 may differ somewhat from what is contained in this scenario guide. Additionally, some parameters have been enhanced to ensure an accurate depiction of these events.

**SCOPE - PARTICIPANTS and  
- OBJECTIVES**

**A.1 Scope**

This exercise is intended to demonstrate Northeast Utilities capabilities in support of nuclear incident response activities and to ensure they meet the requirements as they pertain to the Haddam Neck Stations Emergency Plan.

**A.2 Participating Agencies**

Those organizations expected to participate in the Exercise include the following:

<u>Utility</u>	<u>Municipalities</u>
Connecticut Yankee Atomic Power Company Haddam Neck Plant, Haddam, Connecticut,	Town of Chester,
Northeast Utilities Service Company (NUSCO), Corporate Headquarters, Berlin, Connecticut	Town of Colchester,
	Town of Deep River,
	Town of Durham,
<u>CT State Agencies</u>	Town of East Haddam,
Governor's Office	Town of East Hampton,
Connecticut Office of Emergency Management,	Town of Essex,
Connecticut Department of Environmental Protection,	Town of Haddam,
Connecticut Department of Health,	Town of Hebron,
Connecticut State Police,	Town of Killingworth,
Connecticut Department of Agriculture,	Town of Lyme,
Connecticut Department of Consumer Protection,	Town of Madison,
Connecticut Department of Transportation, and	Town of Marlborough,
Connecticut National Guard.	Town of Middlefield,
	Town of Middletown,
<u>Host Community</u>	Town of Portland,
Norwich	Town of Salem, and
Windam	Town of Westbrook

**A.3.1 On-site Objectives**

CORE ELEMENTS AND OBJECTIVES	APPLICABLE FACILITIES
<p><b>1. <u>ACCIDENT DETECTION / ASSESSMENT AND CLASSIFICATION</u></b></p> <p>Demonstrate the capability to classify an incident based on plant conditions and confirm (when possible) the emergency classification by dose calculations or monitoring.</p>	<p>CR EOF TSC</p>
<p><b>2. <u>NOTIFICATION OF ON-SITE AND OFF-SITE RESPONDERS</u></b></p> <p>Demonstrate the capability to promptly notify <b>on-site</b> responders of emergency conditions, emergency classifications, activation of emergency organizations and facilities, protective actions, radioactivity release status, and any changes to these conditions.</p> <p>Demonstrate the capability to promptly notify <b>off-site</b> officials, including the NRC, of emergency conditions, emergency classifications, activation of emergency organizations and facilities, recommended protective actions, radioactivity release status, potentially affected populations, projected population doses, and any changes to these conditions.</p>	<p>CR EOF</p>
<p><b>3. <u>COMMUNICATIONS</u></b></p> <p>Demonstrate the capability for all communications systems within each center to function properly in establishing and maintaining communications with each other and especially with the control room.</p> <p><i>*NRC area for improvement from Exercise Inspection 50213/93-02</i></p>	<p>CR *EOF TSC RMT ERT SEC *CEOC *OSC</p>
<p><b>4. <u>RADIOLOGICAL EXPOSURE CONTROL</u></b></p> <p>Demonstrate the capability to confirm and continually assess the habitability of the emergency response centers.</p> <p>Demonstrate the capability to properly implement appropriate iodine-protective measures (use appropriate respiratory protection or take KI).</p> <p>Demonstrate the capability to provide at risk on-site personnel with adequate protective equipment such as self contained breathing apparatuses (SCBA) and monitoring equipment with sufficient ranges.</p>	<p>CR EOF TSC OSC RMT ERT SEC</p>

**CY 1994 Annual Exercise**

CORE ELEMENTS AND OBJECTIVES	APPLICABLE FACILITIES
<p><b>5. <u>PROTECTIVE ACTION DECISION / RECOMMENDATION MAKING</u></b></p> <p>Demonstrate the capability to decide on protective actions for on-site and off-site personnel without waiting for a dose assessment. Appropriate decision makers should promptly recommend protective actions on-site and off-site consistent with criteria established in the emergency plans.</p> <p><b>*NRC Area For Improvement from Exercise Inspection 50-213/93-02 and 50-213/92-06-02.</b></p> <p>Demonstrate the ability for the Corporate Manager Radiological Consequence Assessment (CMRCA) to receive concurrence on PARs from the Director Corporate Response Organization (DCERO) prior to communicating them to the State of Connecticut.</p>	<p>CR EOF *CEOC</p>
<p><b>6. <u>STAFFING AND AUGMENTATION</u></b></p> <p>Demonstrate the capability to augment control room staff and staff emergency centers in accordance with staffing requirements identified within the emergency plans and implementing procedures.</p> <p>Demonstrate the capability to adequately brief relief personnel when utilized.</p>	<p>CR EOF TSC OSC CEOC</p>
<p><b>7. <u>ANALYSIS OF PLANT CONDITIONS AND CORRECTIVE ACTIONS</u></b></p> <p>Demonstrate the capability to maintain an overview of the reactor and plant conditions using the expertise of technical staff and the information provided by them from other sources.</p> <p>Demonstrate the capability to recognize that events are progressing abnormally and develop appropriate strategies to bring the plant to a safe shutdown condition.</p>	<p>CR TSC CEOC</p>
<p><b>8. <u>FACILITY MANAGEMENT AND CONTROL</u></b></p> <p>Demonstrate the capability for the facility manager to coordinate and oversee the overall response and redirecting the response when necessary.</p> <p>Demonstrate the capability for emergency response personnel to perform actions in accordance with appropriate emergency response procedures and instructions.</p> <p><b>*NRC Area For Improvement from Exercise Inspection 50-213/93-02 and 50-213/92-06-02.</b></p> <p>Demonstrate the ability for the TSC staff to have access to control circuitry wiring diagrams and vendor manuals.</p>	<p>CR EOF *TSC OSC CEOC</p>

## CY 1994 Annual Exercise

CORE ELEMENTS AND OBJECTIVES	APPLICABLE FACILITIES
<p><b>9. <u>IMPLEMENTATION OF ON-SITE PROTECTIVE ACTIONS</u></b></p> <p>Demonstrate the capability, if warranted by conditions, for the control room to initiate on-site protective actions until the EOF is activated.</p> <p>Demonstrate the capability, while in a Site Area Emergency or a General Emergency, to evacuate all on-site nonessential personnel to off-site locations identified in the emergency plan. Also appropriate protective measures should be initiated for those personnel remaining on site (e.g., <b>Accountability</b>, <b>KI</b>, protective clothing).</p> <p>Demonstrate the capability, while in a General Emergency <b>with</b> imminent releases projected, to evacuate all on-site nonessential personnel without radiological monitoring or decontamination, to off-site locations identified in the emergency plan.</p> <p>Demonstrate the capability, while in a General Emergency <b>without</b> imminent releases projected, to evacuate all on-site nonessential personnel following radiological monitoring or decontamination, to off-site locations identified in the emergency plan.</p>	<p>CR EOF TSC OSC RMT ERT SEC</p> <p><b>ACTUAL EVACUATION WILL BE SIMULATED</b></p> <p><b>ACTUAL EVACUATION WILL BE SIMULATED</b></p> <p><b>ACTUAL EVACUATION WILL BE SIMULATED</b></p>
<p><b>10. <u>RADIOLOGICAL ASSESSMENT</u></b></p> <p>Demonstrate the capability and knowledge to use approved procedures for dose assessment. If a release is anticipated or in progress personnel should correctly and rapidly assess and integrate information from the reactor's systems status and trends, source-term assumptions, post-accident sampling system samples, and meteorological information to define the magnitude and location of the on-site and off-site impact.</p> <p>Demonstrate the capability, if a release is underway, to promptly initiate on-site sampling and monitoring to confirm the composition of releases to better define the source term and confirm projected doses.</p>	<p>EOF CEOC</p>
<p><b>11. <u>DISPATCH AND COORDINATION OF RADIOLOGICAL MONITORING TEAMS</u></b></p> <p>Demonstrate the capability, if a release is anticipated or is underway, to promptly deploy teams to perform radiological monitoring at appropriate locations to characterize the size, location and intensity of the plume.</p>	<p>CR EOF OSC CEOC RMT</p>

**CY 1994 Annual Exercise**

CORE ELEMENTS AND OBJECTIVES	APPLICABLE FACILITIES
<p><b>12. <u>CONDUCT FACILITY CRITIQUE</u></b></p> <p>Demonstrate the capability for each facility to hold a preliminary critique at the end of the exercise while details are fresh. The preliminary critiques should be followed by a formal critique that evaluates the overall performance and the interaction of facility representatives and players with one another. Evaluators should provide an unbiased and candid evaluation of the exercise identifying areas of strength as well as areas of weakness and areas needing improvement.</p>	<p><b>CR    EOF   TSC   OSC</b>  <b>RMT   ERT   SEC   CEOC</b></p>

**CY 1994 Annual Exercise**

FIVE YEAR PLAN ELEMENTS / OBJECTIVES	APPLICABLE FACILITIES
<p><b>13. <u>OFF-HOURS STAFFING (6 p.m. to 4 a.m.)</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedure in response to an event which is initiated between the hours of 6 p.m. and 4 a.m.</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>14. <u>ACTIVATION OF EMERGENCY NEWS CENTER (JOINT INFORMATION CENTER)</u></b></p> <p>Demonstrate the capability to disseminate accurate and timely information to the media / press and to coordinate these releases with off-site officials and the NRC. Information provided to the public should be prepared to the technical level that the public can understand.</p> <p>Demonstrate the capability to promptly provide corrected or supplemental information in the event of an error or misinformation in news stories (e.g., Rumor Control)</p>	<p><b>CEOC (at State Media Center)</b></p>
<p><b>15. <u>USE OF FIRE CONTROL TEAMS</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedure in response to an event which requires the utilization of the stations fire control teams.</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>16. <u>USE OF FIRST AID AND / OR RESCUE TEAMS</u></b></p> <p>Demonstrate the capability to initiate and perform actions promptly following the decision to conduct an operation. The operation should be carried out in coordination with the control room and teams should be briefed on potential hazards.</p> <p>Demonstrate the capability to provide teams with adequate radiological exposure control measures and communications.</p>	<p><b>NOT DEMONSTRATED</b></p>

**CY 1994 Annual Exercise**

FIVE YEAR PLAN ELEMENTS / OBJECTIVES	APPLICABLE FACILITIES
<p><b>17. <u>USE OF MEDICAL SUPPORT PERSONNEL</u></b></p> <p>Demonstrate the capability to give appropriate consideration to first aid treatment and associated radiological hazards. Treatment and decontamination efforts shall be commensurate with the extent of the injuries. To the extent possible, radiological controls should be utilized during transport to medical facilities.</p> <p>Demonstrate the capability to inform offsite medical facilities in advance of the victims arrival of both medical and radiological conditions.</p> <p>Demonstrate the capability to have a qualified radiological control technician accompany the victim to the hospital and brief hospital personnel on the extent of the injury and on any contamination levels.</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>18. <u>USE OF LICENSEE'S HEADQUARTERS SUPPORT PERSONNEL</u></b></p> <p>Demonstrate the capability for the Corporate Command Center to activate and perform its function in a timely manner with congestion and noise levels kept to a minimum.</p> <p>Demonstrate the Corporate Command Center's capability to provide timely support in areas such as government liaison, logistics and support.</p>	<p><b>CEOC</b></p>
<p><b>19. <u>USE OF SECURITY PERSONNEL TO PROVIDE PROMPT ACCESS FOR EMERGENCY EQUIPMENT AND SUPPORT</u></b></p> <p>Demonstrate the capability for security personnel to control access to the site without undue hinderance to emergency response efforts.</p> <p>Demonstrate the capability for security personnel to account for all on-site personnel and for the names of missing individuals within the time specified within the emergency plan.</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>20. <u>USE OF BACKUP COMMUNICATIONS</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedure in response to an event which requires the use of backup communications systems.</p>	<p><b>EOF</b></p>
<p><b>21. <u>USE OF EMERGENCY POWER (WHERE A PART OF PLANT SAFETY SYSTEMS, e.g. EMERGENCY OPERATIONS FACILITY)</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedures in response to an event which requires the need for backup power systems.</p>	<p><b>EOF</b></p>

**CY 1994 Annual Exercise**

FIVE YEAR PLAN ELEMENTS / OBJECTIVES	APPLICABLE FACILITIES
<p><b>22. <u>EVACUATION OF EMERGENCY RESPONSE FACILITIES (ERFs) AND RELOCATION TO BACKUP ERFs, WHERE APPLICABLE.</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedure in response to an event which requires the evacuation of one or more emergency response centers.</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>23. <u>INGESTION PATHWAY EXERCISE</u></b></p> <p>Demonstrate the capability to implement the emergency plan and procedure in response to an event which proceeds beyond the plume phase of an emergency into the Ingestion phase. This is accomplished through the collection and analysis of all appropriate types of environmental samples (including soil) and by sharing that information with state and local health officials</p>	<p><b>NOT DEMONSTRATED</b></p>
<p><b>24. <u>PASS SAMPLING AND ANALYSIS</u></b></p> <p>Demonstrate the capability to collect and analyze a Post Accident Coolant or Containment Air Sample under simulated emergency conditions while limiting radiological exposure to within required exposure limits.</p> <p>Demonstrate the capability to analyze the PASS samples for noble gases, radioiodine, cesium, nonvolatile isotopes, hydrogen, chlorides, and boron.</p> <p>Demonstrate the capability to make results of these analyses available to appropriate technical emergency staff within three hours of sampling.</p>	<p><b>NOT DEMONSTRATED</b></p>

**CY 1994 Annual Exercise**

FIVE YEAR PLAN ELEMENTS / OBJECTIVES	APPLICABLE FACILITIES
<p><b>25. <u>DISPATCH AND COORDINATION OF CORRECTIVE ACTION TEAMS</u></b></p> <p>Demonstrate the capability to initiate and perform actions promptly following the decision to conduct an operation in coordination with the control room and to be briefed on potential hazards.</p> <p>Demonstrate the capability to provide teams with adequate radiological exposure control measures and communications.</p> <p><b>*NRC Area For Improvement from Exercise Inspection 50-213/93-02</b></p> <p>Demonstrate the OSC ability prioritize resources and work repair evolutions simultaneously.</p> <p>Demonstrate the ability of the Controller Organization to provide to the players only earned information.</p>	<p><b>CR TSC EOF *OSC ERT</b></p> <p><b>*ERT Controller Organization</b></p>
<p><b>26. <u>RECOVERY AND REENTRY</u></b></p> <p>Demonstrate the ability to initiate plans for reentry and recovery and describe the means by which decisions to relax protective measures (e.g., allow reentry into a previously evacuated area) are reached.</p>	<p><b>Not Demonstrated</b></p>

Applicable Facilities Key	
CR - Control Room (Affected Unit)	EOF - Emergency Operations Facility
TSC - Technical Support Center	OSC - Operational Support Center
RMT - Radiological Monitoring Teams	ERT - Emergency Reentry/Rescue Teams
SEC - CAS, SAS, Security Force	CEOC - Corporate Emergency Operations Center

**B. Timeline/Scenario**

**B**

**TIMELINE and  
EXERCISE CONTROLLER GUIDE**

B.1.0 Timeline

1994 Emergency Response Exercise Scenario Time Line

TIME

0700	Players and Controllers arrive at the Simulator
0730	Event 1, Exercise Start
0745	Event 2, Loss of Annunciators
0800	Event 3, (Alert Charlie 1)
0900	EOF and Emergency Organizations are staffed up
0915	Event 4, Small RCS leak begins
0920	Event 5, Annunciator power can be restored after this time.
0930	Plant may start controlled shutdown
0955	Event 6, RCS leak increases, Reactor Trip and SI
1000	Event 7, Loss of power (station blackout), offsite line break, offsite line trip, "B"EDG fails (SAE Charlie 2)
1015	Event 8, Large Break LOCA, MOV 31 breaker failure
1030	Return of power- tripped offsite line 1772 reset
1040	Event 9, Injection flow / refill begins, CET's > 1200 degrees peak
1045	Event 10, Radiation release outside CTMT
1115	(GE "ALPHA" )
1135	MOV31 breaker repaired
1145	Event 11, Fire main to CTMT is restored
1200	Event 12, Radiation release diminished
1300	Event 13, Exercise terminated

## CY 1994 Annual Exercise

### B.2.0 Scenario

#### B.2.1 Initial Conditions

The following conditions are provided to the control room operators during the pre-shift brief.

- "A" Emergency Diesel Generator is Out of Service due to piston replacement in the 8th hour of a 72 hour Tech Spec Action Statement (awaiting parts to be delivered in 24 hours)
- Unit is operating at 100% power.
- The fuel is at the middle of core life (MDL).

#### B.2.2 Pre-Conditions

The following conditions will remain unknown to the operators until the control room operating crew determines the specific fault or condition.

- The "B" Emergency Diesel Generator will fail upon initiation of Safety Injection.
- MOV 31 breaker fails to open when called upon for CTMT spray.

#### B.2.3 Scenario Summary

[ - ] Key event initiation time.

[ ≈ ] Approximate time event is expected to occur.

#### B.2.4 Event and Simulator Code Guide

CLOCK TIME	EVENT DESCRIPTION	SIMULATOR CODES/ACTIONS
- 0700 Initial Conditions	Exercise controllers and players arrive at the simulator and control room annex.	
- 0720	Shift turnover and board walk-down.	
- 0730 <b>EVENT 1</b>	Exercise start. 100% Rx Power, MDL core conditions 450 ppm Boron, Equilibrium Xe Bank "B" Rods at 300 Steps	Simulator to run. Reset IC - 14 !DA-EGRO9 - Start disable "A" EDG MALF-EGRO6B - Start Failure "B" EDG (Unknown to Operators)
- 0745 <b>EVENT 2</b>	Loss of Annunciator Power to all Primary and Secondary Annunciators *AOP 3.2-49	Manually open DC ckt A10 & B10 MCB (rear)
- 0800 <b>EVENT 3</b>	<b>ALERT Posture Code Charlie 1</b> Classification made and Notification begins	
- 0800	The Duty Officer responds to the control room.	
≈ 0830	The DSEO responds to Emergency Operations Facility (EOF).	
≈ 0845-0900	The EOF and the Emergency Organization are staffed.  Once the Emergency Organization assesses plant conditions, efforts are initiated to regain the Annunciators.	
≈ 0915 <b>EVENT 4</b>	A small RCS leak begins < 4 gpm  *AOP 3.2-31	RC07 - 2% severity  R11,R12, & R32 into Alarm

## CY 1994 Annual Exercise

CLOCK TIME	EVENT DESCRIPTION	SIMULATOR CODES/ACTIONS
≈ 0920 <b>EVENT 5</b>	Repair can be made to Annunciator breaker and annunciator power can be restored when players have earned it.  *Controller Call Sim Booth with this report prior to player given message	Restore Annunciator power when called by repair controller.
≈ 0930	Down power in response to plant shutdown required by Tech Spec. (3/4.4.6.2b), Greater than 1 gpm unidentified leakage  *NOP 2.2-1	Plant Downpower at approx. 2.5 MWe/min.
- 0955 <b>EVENT 6</b>	RCS leak increase in size > 200 gpm PZR level and Press drop rapidly, Resulting in Rx Trip and Safety Injection actuated  *E-0	RC06 - 30% severity ramped in over 360sec.
- 1000 <b>EVENT 7</b>	Loss of power. ( A local fishermans truck swerves off road to prevent hitting a deer and knocks out 1 incoming off-site AC (1206) line the other offsite (1772) line also trips off the line at that time. Also when the "B" EDG is started it breaks its fuel rack control rod. This causes a station blackout.)  *ECA -0.0	ED01A - Loss of Off-Site AC ED01B  EGR06B - Start failure "B" EDG comes in  <b>SAE Charlie 2 Declared</b>
≈ 1010	Operators Locally Control Aux. Feed Water to all S/G's and various other Secondary Plant manipulations.	IDA - F'VR 18,19,20,21 IDA - F'JR 28,29 IDA - FWR 07,08,01 IDA - SWR 08 IDA - SGR 11,12,13,14 IDA - CVR 56,57,58,59 IDA - CCR 15
≈ 1015	Operators Locally Dump Steam From intact S/G's	IDA - MSR 11,12,13,14 IDA - MSR 43,44
- 1030 <b>EVENT 8</b>	Large Break LOCA occurs at point of previous leak causes complete depressurization of RCS	RC01D - 100% severity
- 1030	CONVEX resets 1772 offsite AC line and power returns.	Remove ED01B IDA - EDR 28,29
- 1040 <b>EVENT 9</b>	Operators lineup electrical plant and start HPSI, LPSI and Car Fans to begin refill. CET's > 1200 peak  *ECA - 0.2	
- 1045 <b>EVENT 10</b>	Radiation Release outside CTMT begins.	Malfunction - RM01K and RM01L at 34% over 360 sec. RM01G - 37% RM01A&B at 100%

## CY 1994 Annual Exercise

CLOCK TIME	EVENT DESCRIPTION	SIMULATOR CODES/ACTIONS
- 1100 - 1115	General Emergency Posture Code ALPHA is declared.	
- 1135	MOV 31 Breaker Repaired  *Controller Call Sim Booth with this report prior to player given message	
- 1145 <b>EVENT 11</b>	If Required Firemain can be restored to CTMT Spray to reduce CTMT Press to approx. 0 psig at 12:00	CH05 B&C 4% - 0.0psig 10% - 7.5psig 25% - 26.3psig CH05 A - Sets MCB indicator per above
≈ 1200 <b>EVENT 12</b>	CTMT Press is equalized , Radiological released diminished.	CH05 A,B,C to 0.0psig
- 1300 <b>EVENT 13</b>	The Exercise is terminated.	FREEZE

C

SCENARIO  
NARRATIVE

The exercise begins at 0700 on May 14, 1994 with all conditions external to the plant as they appear except the weather. The weather is predetermined to be a normal spring day with wind temperature and other conditions as described in Section F.6, Meteorological Data. The plant operating crew reports to the Simulator Control Room at 0700 and is provided the following brief. The plant is operating at 100% power at middle core life (MOL). The major equipment out of service is the "A" Emergency Diesel Generator. This places the plant in a Tech Spec Action Statement requiring a fix to be performed within 72 hours or a plant Shutdown is in order. Parts will arrive on site in approximately 24 hours. All notifications have been made (Convex, NUSCO Duty Officer, Station Director).

At 0730, (EVENT 1) the scenario starts, on shift simulator control room players and on-site on shift players begin play.

At about 0745 (EVENT 2) loss of all Annunciators becomes known to operators. The operators will proceed to AOP 3.2 - 49 then to EPIP 1.5 - 1 for classification determination. At 08:00 (EVENT 3) the Shift Supervisor (SS) and the Duty Officer (DO) declare an ALERT Posture Code Charlie 1 due to "Observed loss of most or all pri and sec annunciators for > 15 min." They will have the Staff Assistant (SSSA) notify via the notification system all appropriate members of the Emergency Response Organization (ERO) this will start ERO members to begin to respond to their Emergency Response Facilities (ERF). From 08:00 till 09:00 the ERF's will be manning up. also during this time Plant staff will be trying to identify the extent of the loss of annunciators and have staff monitor critical plant parameters closely. At approximately 09:00 the Enclosed Operating Facility (EOF) and the rest of the Emergency Organizations should be fully manned. At 09:15 (EVENT 4) a small RCS leak begins < 4 gpm Operators will enter AOP 3.2 - 31. At 09:20 (EVENT 5) repair team may complete repair on the annunciator power supply breaker and reenergizes the annunciators. By 09:30 the plant staff should commence a downpower (NDP 2.2 - 1) in response to plant shutdown required by Tech Spec. (3/4.4.6.2b), greater than 1 gpm unidentified leakage. Shutdown should be controlled at 2.5 MWe/min. At 09:55 (EVENT 6) the RCS leak increases in size to > 200 gpm. Pressurizer level and Pressure drop rapidly this will result in the operators manually Tripping the Reactor and initiating Safety Injection. The control room operators will enter EO reactor trip and safety injection procedure.

At about 10:00 (EVENT 7) A local fisherman while returning from a morning of fishing driving past the switchyard on top of the hill swerves off road to prevent from hitting a deer and knocks out the 1206 incoming AC line, the 1772 line also trips off the line at this time. This in conjunction with the "B" EDG mechanical failure results in a total loss of onsite and offsite power (Station Blackout ECA 0.0). By 10:15 the Director Site Emergency Operations (DSEO) should classify the EVENT as a Site Area Emergency, posture code Charlie-Two. The classification is based on "Loss of all offsite power and all onsite power capability for > 15 min." They should then have the Shift Supervisor Staff Assistant (SSSA) make the appropriate notification to all on and off-site emergency response personnel via the Emergency Notification and Response System (ENRS).

During ECA 0.0 the Control room operators will have the Nuclear Systems Operators (NSO) locally control Aux. Feedwater and Steam dumps. Also secure non priority electrical equipment if required.

At 10:30 (EVENT 8) A large break LOCA occurs at point of previous leak and causes a complete depressurization of the RCS. Also at 10:30 CONVEX resets the 1772 offsite AC line and power on that line is now available.

At 10:40 (EVENT 9) Operators have lined up electrical plant so as to start injection flow.  
Core Exit Thermal Couplers (CET) are > 1200 deg. F peak.

At 10:45 (EVENT 10) A heating steam line from the Primary Auxiliary Building (PAB) to Containment breaks inside containment and leaks into the West Pipe Trench outside containment causing a release path outside containment.

Between 11:00 - 11:15 the Director of Station Emergency Organization (DSEO) declares a General Emergency posture code ALPHA. This classification is based on "loss of three barriers with forecasted integrated offsite dose of > 1 rem TEDE."

At 11:35 maintenance repair team repairs or replaces MOV 31 breaker.

At 11:45 (EVENT 11) the operators open MOV 31 and provide firemain to Containment Spray. this allows for the reduction of Containment Pressure.

At 12:00 (EVENT 12) Containment Pressure is equalized and the Radiological Release is diminished.

At 1300 (EVENT 13) If it is determined by the on and offsite Controlling/Evaluating Organizations that all appropriate objectives have been demonstrated then the exercise onsite and offsite may be terminated.

## 1994 CONNECTICUT YANKEE EXERCISE

Success Path Table

Activity	Probable Start to Completion Times	Probable Repair/ERT Personnel	Corrective Action Allowed	Scenario Activity
1. EG2 "A" Emergency Diesel Generator.	0700-End	Maintenance	NO	Evaluation Only in "A"EDG Room talk through with controller
2. Annunciator Failure	0745 to >0920 (FREE PLAY)	CRO/Electrician	Yes	Player to Identify location and then proceed to Swgr Room and simulate repair activities with mock up
3. RCS Leak	0915-END	NONE	NO	In Containment
4. EG2 "B" Emergency Diesel Generator.	Upon SI actuation to >1100 (FREE PLAY)	NSO/Mechanic	YES	Evaluation and Repair in the "B" EDG Room talk through with controller.
5. Loss of offsite power	1000 - 1030	CONVEX Control Cell	YES	Messages from Sim Booth Operator to stimulate Play
6. Monitor CET's Locally	Upon loss of power 1000 -1030	1 NSO/ I&C Specialist	YES	Players respond to Swgr Room to simulate taking local readings
7. MOV 31 Breaker	Upon LOCA - 1135	Repair Team	YES	Players respond to Swgr Room/ MCC5 and simulate repair activities with mock up

## 1994 CONNECTICUT YANKEE EXERCISE

### Sub-Scenarios

The following Sub-Scenarios are provided to further describe actions taken in response to specific events.

#### Primary to Secondary leakage

Postulated small amount of Primary to Secondary leakage in the #4 S/G well below any Tech Spec Limit.

#### RCS small leak, big leak and large break LOCA

Postulated stress hairline fracture causes small then a major RCS piping failure.

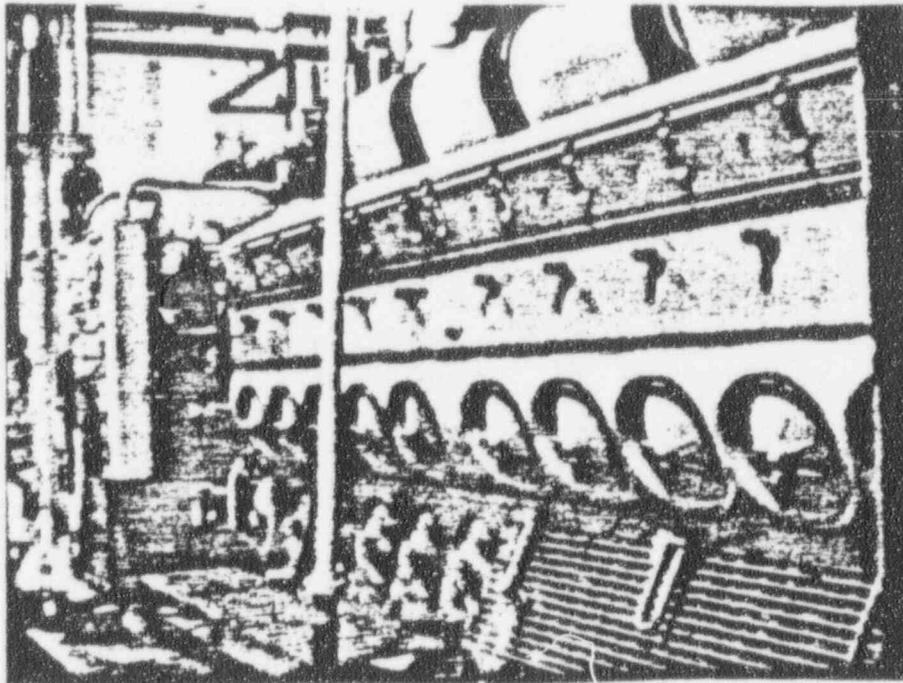

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
09:15	SS/CRO	Small RCS leak occurs <4gpm leakage.	The control room operations crew will enter and follow AOP 3.2-31.	The Simulator Booth operator activates this malfunction. The simulator will provide all necessary indications to the control room operating crew.
09:55	SS/CRO	RCS leak increases in size > 200gpm.	The control room operations crew will enter and follow	The Simulator Booth operator activates this malfunction. The simulator will provide all necessary indications to the control room operating crew.
10:30	SS/CRO	Large Break LOCA of RCS piping.	The control room operations crew will enter and follow	The Simulator Booth operator activates this malfunction. The simulator will provide all necessary indications to the control room operating crew.

## 1994 CONNECTICUT YANKEE EXERCISE

### EG2 "A" Emergency Diesel Generator

"A" Emergency Diesel Generator Out of Service for piston replacement. It is in the 8th hour of a 72 hour Tech Spec Action Statement. Part to be Delivered in approximately 24 hours.

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
07:30	SS/CRO	Repair of the 2A Emergency Diesel generator will not be allowed in the confines of this drill.	Annunciators: J1-2-2, Diesel Gen. 2A not ready for auto-start. J1-3-3, Diesel Gen. ACB auto-trip. 2A EDG is torn apart repair time >24hrs.	This repairs on hold until new pistons arrive on site. The Simulator Booth operator activates this malfunction. The simulator will provide all necessary indications to the operating crew.

## 1994 CONNECTICUT YANKEE EXERCISE

Sub-Scenario:

**Annunciator Failure**

CONTROLLER NOTES: Report all plant operations and equipment recoveries to the Simulator Booth Operator.

Provide to the player underlined information contained in the "Response/Cue" column only when earned.

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
≈07:45	CRO	Annunciators: J1-2-2, Diesel Gen. 2A not ready for auto-start. J1-3-3, Diesel Gen. ACB auto-trip Annunciator lights go out.	The control room operators go to back of Main Control Board and investigate.	The Simulator Booth operator manually causes the Annunciators to fail.
≈07:47	CRO		The control room operations crew acknowledges no alarm annunciators.	
≈08:00	SS/DO/SSSA	Classify Event and Notify Organization	Send ENRS message	
≈08:15	SS	Needs Electricians to investigate loss of Annunciators.	Call in Electricians	
≈09:00 to 09:20	SS/OSC	Dispatches repair team to investigate Loss of Annunciators.	"A" side = Annunciator can Failure "B" side = Annunciator Breaker failure.	Report to the Simulator Booth operator when all repairs have been completed.
≈09:20 (FREE PLAY NOT TO BE COMPLETED PRIOR TO 09:20)	Repair Team	Reports repairs to the Annunciators are complete.	Annunciators returned to service	The Simulator Booth operator manually causes the Annunciators to work.

**1994 CONNECTICUT YANKEE EXERCISE**

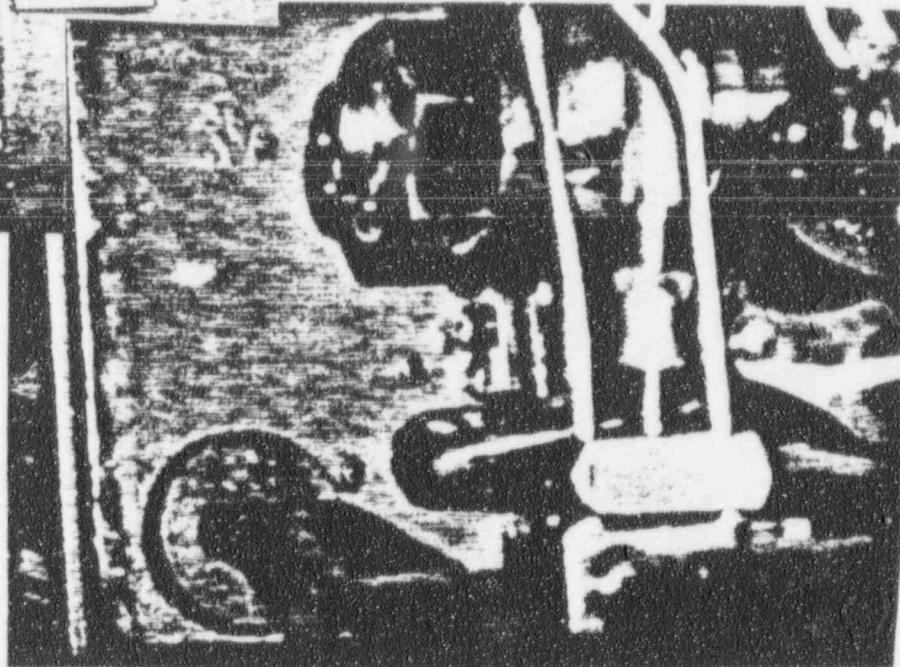

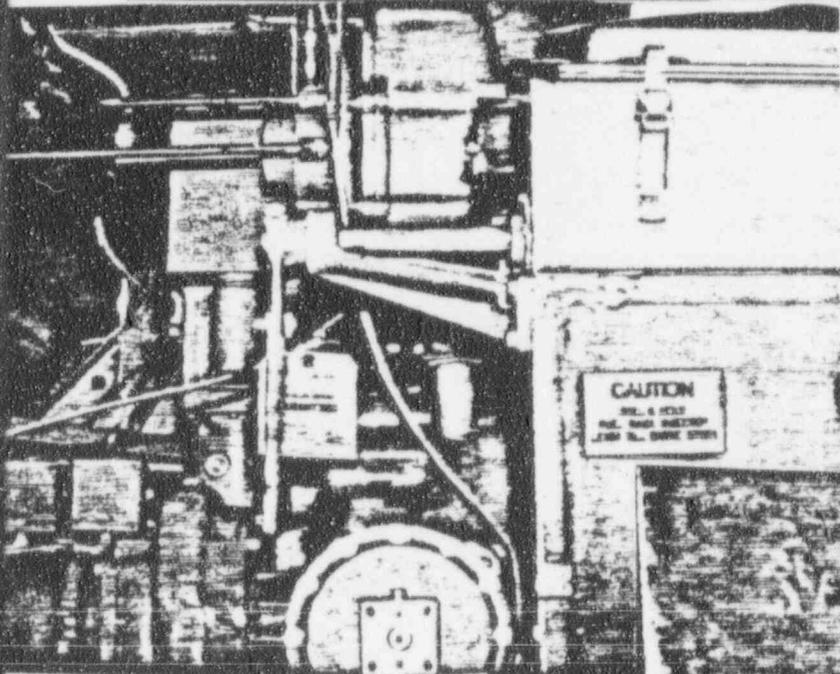

**EG2 'B' Emergency Diesel Generator Failure**

All appears normal at start of exercise. EG2B fails to come up to speed upon Safety Injection (SI). The fuel rack control rod is sheared in two just where it penetrates the inside the valve cover area.

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
≈09:55	CRO	2B Emergency Diesel Generator not running.	The control room operations send NSO to investigate.	The Simulator Booth operator inserts a malfunction to cause the 2B Emergency Diesel Generator to fail to start.
≈09:55	CRO	Alarm annunciator J1-2-7, Diesel Gen. 2B not ready for Auto-start, actuates.	The control room operations crew acknowledges the alarm.	
≈10:00	CRO	Directs NSO to the 2B EDG to investigate.	NSO acknowledges.	
≈10:02	NSO	Proceeds to the 2B EDG room and investigates.	The EDG is not running	
≈10:00 to >11:00	OSC	Dispatches repair team to investigate and repair the 2B EDG.	The 2B Emergency Diesel Generator fuel rack control rod broke.	
≈10:20	Repair Team	Initiates tagout and repairs to the 2B EDG.	Hangs tags, obtains a replacement fuel rack control rod and repair.	

## 1994 CONNECTICUT YANKEE EXERCISE

>11:00	Repair Team	Reports repairs to the 2B EDG are complete.	OSC/CRO acknowledges.	Report to the Simulator Booth operator when all repairs have been completed.
>11:00	CRO	2B EDG is started and loaded if necessary.	Simulator provides all appropriate indications.	

**NOTE:** Pictures are for reference only. They do not reflect scenario conditions. Controllers will provide that information.

## 1994 CONNECTICUT YANKEE EXERCISE

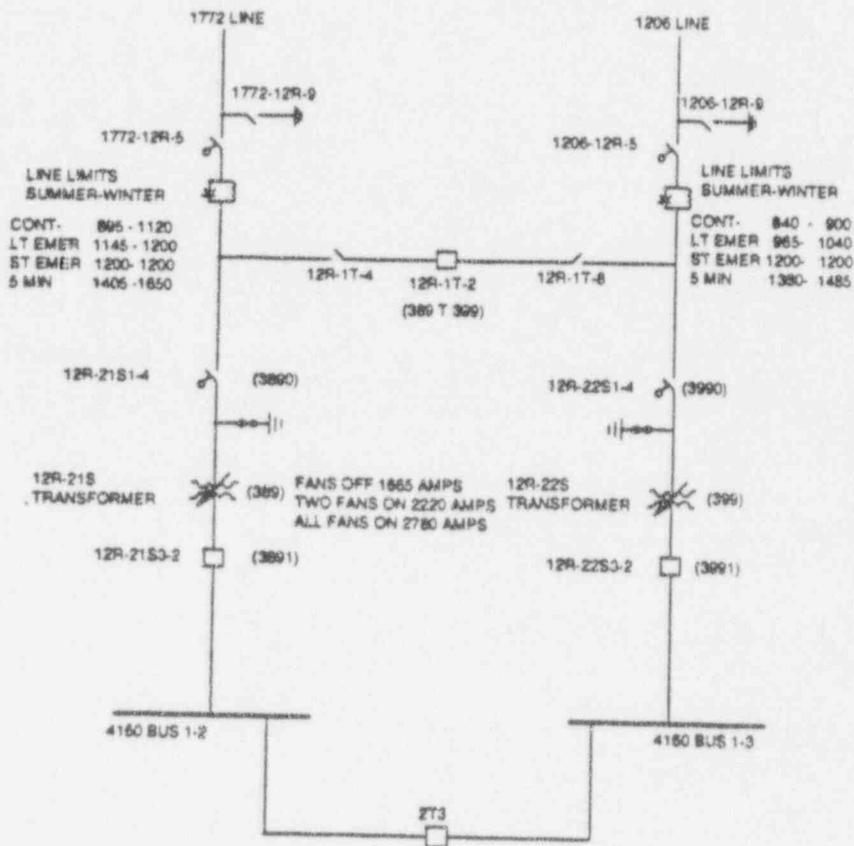

### Loss of all Off-Site AC

All offsite AC is lost when a fisherman inadvertently swerves off the road and crashes into the 1206 incoming line this in turn causes the 1772 incoming line to trip off the line. The fisherman is not hurt in the accident. CONVEX must send a local crew out to determine the extent of damage.

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
-10:00	SS/CRO	Loss of offsite power.	Control room operations crew follows EOP in response to the Loss of Offsite Power.	Offsite Power is lost due to a motor vehicle knocking down the 1206 line and the 1772 also trips but is undamaged this causes the power loss. The Simulator Booth operator inserts a malfunction to cause a station blackout.
10:05	CONVEX	Investigates cause.	Acknowledges loss of the 1206 and the 1772 lines	
≈10:20	CONVEX	Reports status of the 1206 and the 1772 lines	Reports back to Control Room that local crew is at power lines and reports that 1206 line broken but 1772 line appears O.K.	Operators relay Offsite power status to EOF.
10:30	CONVEX	Returns power to 1772 line	Reports to Control Room that the 1772 line is re-energized.	Operators begin restoring power to plant.

1994 CONNECTICUT YANKEE EXERCISE

CY 115 KV SYSTEM

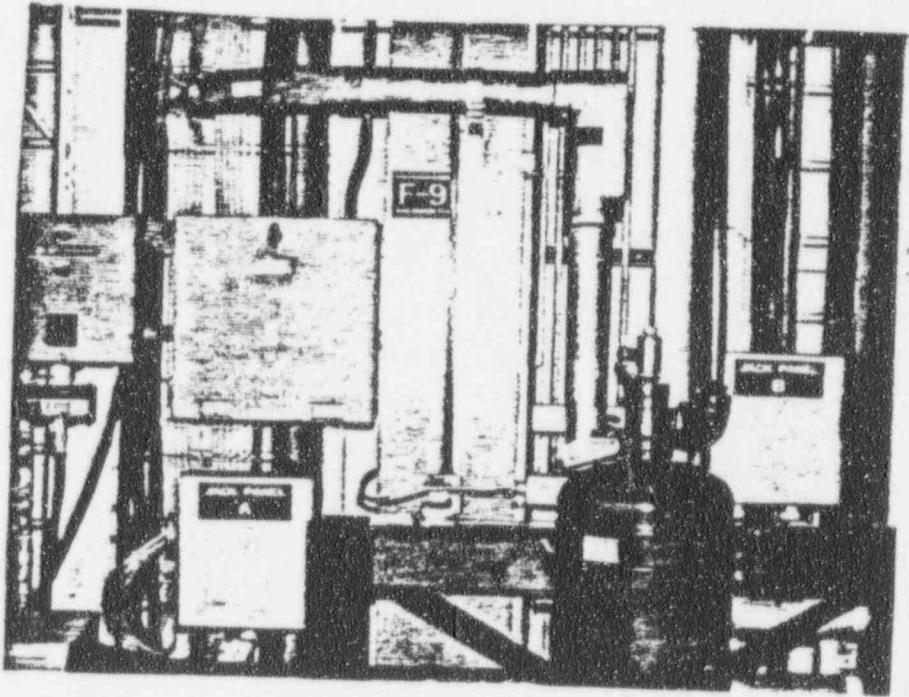

NOTE: Pictures are for reference only. They do not reflect scenario conditions. Controllers will provide that information

## 1994 CONNECTICUT YANKEE EXERCISE

---

### Loss of all Off-Site AC

During the blackout Core Exit Thermocouple readings are not available in the control room but operations may send person to the "A" switchgear to manually take the readings.

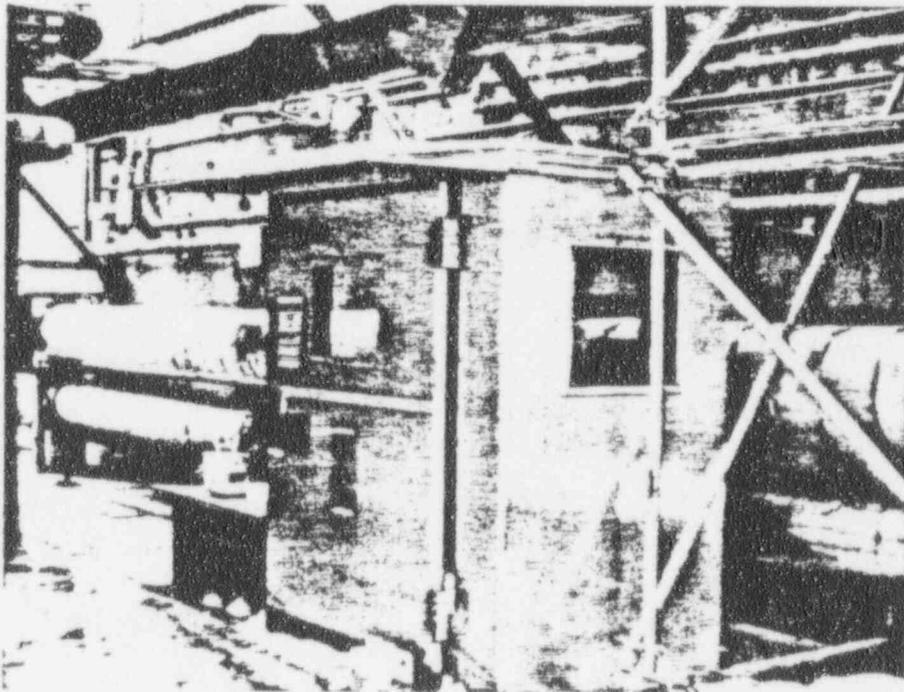

NOTE: Pictures are for reference only. They do not reflect scenario conditions. Controllers will provide that information

## 1994 CONNECTICUT YANKEE EXERCISE

---

### Radiation Release Path

A service steam line from the Primary Auxiliary Building fails inside Containment and causes a weakened pipe cap on the same line in the West Pipe Trench to fail.

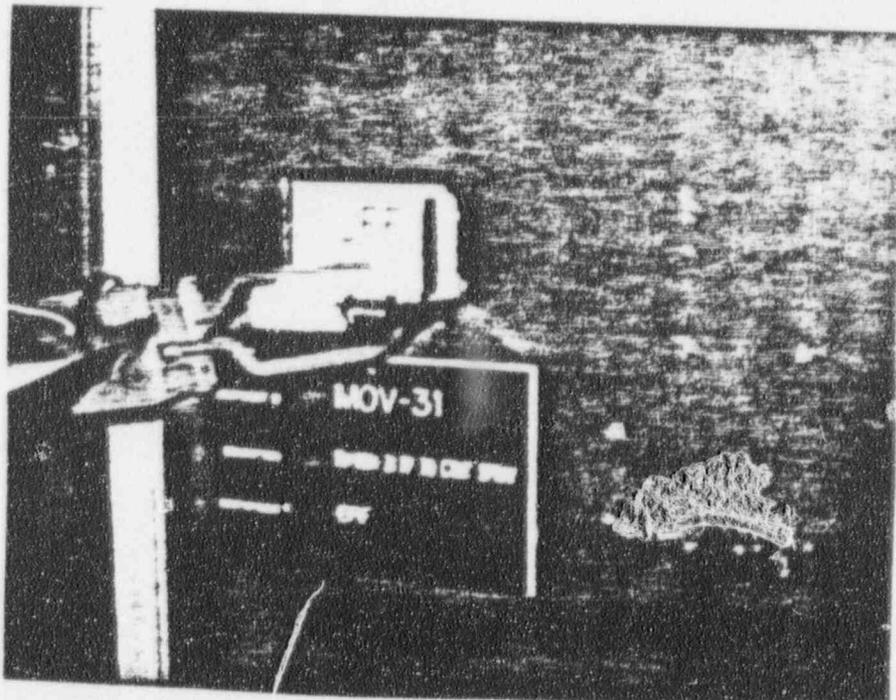

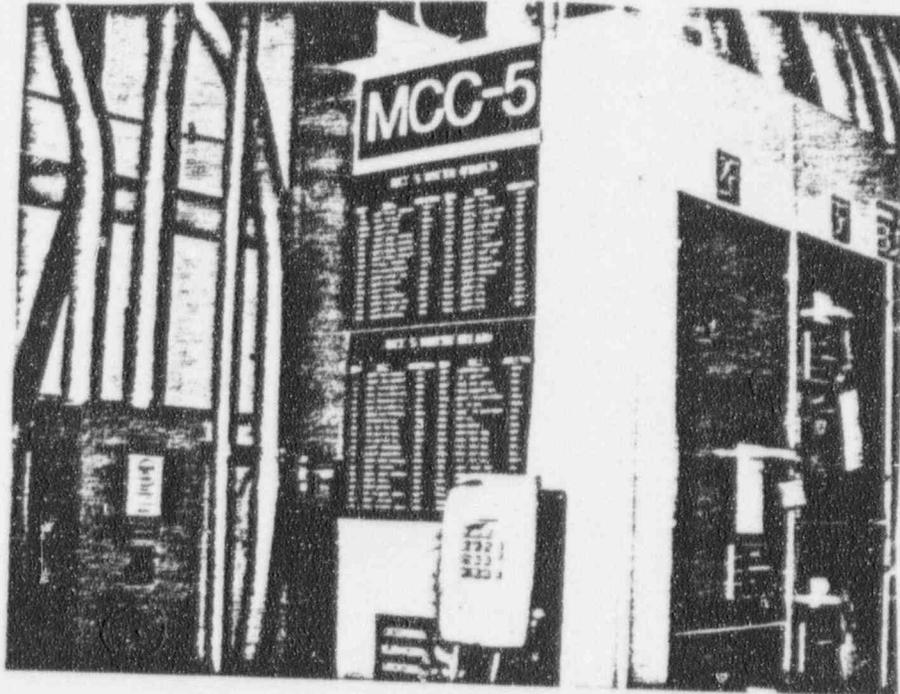

**NOTE:** Pictures are for reference only. They do not reflect scenario conditions. Controller will provide that information.

**1994 CONNECTICUT YANKEE EXERCISE**

**MOV 31 failure**

MOV 31 Firemain to Containment Spray valve breaker fails whenever Control Room Operators try to operate it. Do to the location of the valve (East Pipe Trench) right next to the release point the priority will be to repair or replace the damaged breaker rather than locally operate the valve manually

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
≈10:30	CRO	When Control Room Operators try and use MOV - 31 will not indicate open		The Simulator Booth operator inserts a malfunction to cause MOV31 to fail to open.
≈10:35	NSO	Directs NSO to MCC 5 to investigate MOV 31 breaker status.	NSO acknowledges.	
≈10:40	NSO	Proceeds to the Switchgear room and investigates.		
≈10:42	NSO	Investigates "B"EDG		
≈10:45	NSO	Reports problem with MOV 31.	Recipient acknowledges.	
≈11:00	NSO/Repair Team	Investigates cause of loss of MOV31 breaker.		
≈11:35	NSO/Repair Team	Repair/replace MOV 31 Breaker.		Report to the Simulator Booth operator when all repairs have been completed.
≈11:35	NSO	Report back MOV 31 breaker is repaired and ready to go.	OSC/CRO acknowledges.	
≈11:45	CRO	Opens MOV 31 and Starts Spray of CTMT.	MOV 31 Breaker available to operate	Simulator provides all appropriate indications.

NOTE: Pictures are for reference only. They do not reflect scenario conditions. Controllers will provide that information

1994 CONNECTICUT YANKEE EXERCISE

Sub-Scenario:

Nuclear System Operator(s) Activities

CONTROLLER NOTES:

Report all variant operations and equipment recoveries to the Simulator Booth Operator.

Provide to the player underlined information contained in the "Response/Cue" column only when earned.

Time/Date	Position/Player	Activity	Response/Cue	Controller Information ONLY
≈09:56	CRO	Directs NSO to the 2B EDG to investigate.	NSO acknowledges.	
≈09:57	NSO	Proceeds to the 2B EDG room and investigates.		
≈09:56	NSO	Investigates "B"EDG		
≈10:00	NSO	Reports the 2B EDG is shutdown.	Recipient acknowledges.	
≈10:05	NSO/I&C Tech.	Initiates reading of CET temperatures locally at the input to the ICCS.	Reports CET temperatures as cued	Coordinate all CET temperature provided (cued) to the player(s) with the Simulator Booth Operator.
≈10:05	NSO/Repair Team	Investigates cause of loss of offsite power.		Recovery time will exceed the duration of the exercise.
≈10:15	NSO	Isolate RCP seals as directed by the CRO.	<u>The RCP seals are isolated.</u>	Report all valves operated to the Simulator Booth Operator.
≈10:15	NSO	Throttle Feedwater locally as directed by the CRO.  DUMP STEAM	<u>Feed water is being throttled.</u>  <u>LINE UP TO DUMP STEAM IS SET.</u>	Coordinate all feedwater throttling manipulations with the Simulator Booth operator.
≈10:15	NSO	Secure various electrical loads as directed by the CRO.	<u>Electrical loads are secured.</u>	Report all loads secured to the Simulator Booth operator.
