Attn: Document Control Desk  
Washington, DC 20555

Dear Sir:

Subject: Oyster Creek Nuclear Generating Station  
Docket No. 50-219  
Generic Letter 88-14 Status

The purpose of this letter is to provide the NRC, as requested, the status of GPUN's Generic letter 88-14 implementation.

As the NRC was made aware by our letter dated March 9, 1992, a program to ensure operability of safety related air operated valves was developed and implemented during the previous two outages.

Preventative Maintenance tasks have been written for containment isolation valves. A portion of these valves will be tested during the upcoming 15R outage. This is in accordance with our schedule for testing safety related air operated valves with accumulators/check valves.

If you should have any questions or require further information, please contact Brenda DeMerchant, Oyster Creek Licensing Engineer at (609) 971-4642.

Very truly yours,

John J. Barton  
Vice President & Director  
Oyster Creek
