

DCD

SEP 17 1982

APPLICANT: Washington Public Power Supply System (WPPSS)
 FACILITY: WPPSS Nuclear Project, Unit 3 (WNP-3)
 SUBJECT: MEETING SUMMARY

On August 31, 1982 through September 2, 1982, the NRC Caseload Forecast Panel (CFP) visited the WNP-3 site to obtain information that would be used as a basis for assessing the reasonableness of the applicant's projected fuel load date. The resulting assessment is to be used as input into the development of the schedule for reviewing the recently docketed OL application. Enclosures 1 and 2 are a copy of the meeting notice and the attendance roster.

The meeting proceeded according to the agenda with the exception of one change that provided for the plant tour being conducted the first day instead of the second day.

Enclosure 3 is a handout prepared by the applicant in response to the list of agenda items attached to the meeting notice. This document provided the basis for discussions with applicant representatives during the second day of the visit.

The plant tour was completed and an exit briefing was held on the third day. The CFP indicated that a preliminary review of Enclosure 3, observations made during the tour, and comments by the NRC Senior Resident Inspector indicate that the applicants scheduled fuel load date (December, 1985) is sufficiently reasonable for the staff to use as input into the development of the review schedule. The meeting adjourned at 1:30 PM on September 2, 1982.
