Docket No. 50-346

Toledo Edison Company
ATTN: Mr. Richard P. Crouse
Vice President
Nuclear
Edison Plaza
300 Madison Avenue
Toledo, OH 43652

Gentlemen:

Thank you for your letter dated February 25, 1983, which included a copy of Toledo Edison's Objectives and Guidelines for the Davis-Besse Nuclear Power Station 1983 Annual Exercise. Regarding the Toledo Edison Company objectives, we expect that an actual site assembly with accountability will occur, rather than a simulation. Also, we recommend that an actual demonstration of collecting and analyzing at least one post accident sample (containment air or primary coolant) be added to the exercise objectives. Other post accident sampling during the exercise could be simulated.

If you have any questions, please contact Tom Ploski of my staff at 312/932-2529.

Sincerely,

C. J. Paperiello, Chief
Emergency Preparedness and
Radiological Safety Programs
