SUBJECT: NRC INSPECTION REPORT 50-361/94-15; 50-362/94-15

This refers to the inspection conducted by Messrs. C. Myers, M. Runyan, and Ms. P. Goldberg of this office on April 25-29, 1994. The inspection included a review of activities authorized for your San Onofre Nuclear Generating Station, Units 2 and 3, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. The inspection was conducted to evaluate the effectiveness of your activities to assure the operability and reliability of motor-operated valves in safety-related systems and to meet your commitments to Generic Letter 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance," and to followup on your actions in response to previous inspection findings and enforcement actions. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented on page 1, in the enclosed report.

Your motor-operated valve program was found to have been implemented in a manner consistent with your commitments to Generic Letter 89-10. Your test activities were generally effective in establishing assurance of design basis capability for those motor-operated valves which were sampled during the inspection.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

Thomas P. Gwynn, Director
Division of Reactor Safety
