Re: Reply to a Notice of Violation

Gentlemen;

As per your request in your correspondence dated 5/25/94, the following is AT Laboratories, Inc. written statement regarding the violations received from the NRC:

ATL did engage in licensed activities within the state of Oklahoma, a non-agreement state, without submitting the required documents or otherwise notifying the NRC. However, the correct procedure was not intentionally violated. This violation was due, in part, to a lack of understanding and/or knowledge of the NRC regulations as well as a communication break down between the field office and the RSO within our main office.

However, ATL has changed our procedures to insure that this violation does not occur in the future. A moisture/density gauge will not be shipped to a non-agreement state until the necessary reciprocity arrangements have been entered into with the NRC. In addition, ATL has filed for a permanent license with the NRC in order to be able to perform the necessary testing and transport the required gauges in those areas which require an NRC license. Full compliance has been achieved at this time.

Rec'd w/let # 8539
for \$500.00.
