UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20545

JUL 17 1975

Docket No. 50-238

Port Review No. 66

Maritime Administration  
ATTN: Mr. D. L. Crook, Director  
N. S. Savannah Program  
Post Office Box 1600  
Galveston, TEXAS 77550

**Comments:**

The United States Department of Commerce, Maritime Administration, by letter dated July 11, 1975 has requested review and approval of its revised Port Operating Plan for Baltimore, Maryland (designated MASTS-103). This request has been considered pursuant to the Technical Specification of Facility License No. NS-1 for the N. S. Savannah.

On the basis of our previous review and approval of MASTS-102 "Port Entry and Berthing Plan for Savannah, Georgia" and the consistency of MASTS-103 with that document, we have concluded that the N. S. Savannah can be operated as proposed in and near Baltimore, Maryland, without undue risk to the health and safety of the public.

Accordingly, Port Review No. 66, is hereby issued. If modifications to the Port Operating Plan for Baltimore, Maryland, as approved herein, are contemplated for subsequent reentry to the port of Baltimore, a new port operating plan should be submitted for review.

Sincerely,

George Lear, Chief  
Operating Reactors Branch 23  
Division of Reactor Licensing
