Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555

Subject: Quad Cities Station Unit 1  
Supplement to Proposed  
Technical Specifications to  
DPR-29  
NRC Docket No. 50-254

Reference (a): T. J. Rausch letter to H. R. Denton  
dated August 19, 1982.

Dear Mr. Denton:

In Reference (a), Commonwealth Edison proposed to amend the Appendix A, Technical Specifications, to Facility Operating License DPR-29 to support the review of future Quad Cities Unit 1 reloads in accordance with 10 CFR 50.59. The purpose of this transmittal is to correct two minor typographical errors in Reference (a) and to provide revised MAPLHGR versus exposure limits for Barrier Lead Test Assembly (LTA) fuel.

Revised pages 1.2/2.2-1 and 3.3/4.3-5 are provided in Attachment 1 to this letter. The first page title has been revised to read 1.2/2.2 instead of 1.2/2.1. The second page has been corrected to read 4.3.C.3 instead of 4.3.C.5 for the new scram insertion time surveillance.

Also contained in Attachment 1 is revised Figure 3.5-1 (Sheet 1 of 4). This figure has been changed to provide extended MAPLHGR vs. exposure curves for Barrier LTAs. The results of General Electric ECCS analyses supporting this revision are provided in Attachment 2. This change has received On-Site and Off-Site review and approval.

Please direct any questions you may have concerning this matter to this office. The required 10 CFR 170 fees were provided previously in Reference (a).

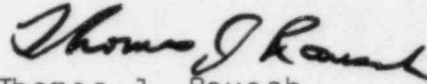

H. R. Denton
