Commissioner Remick's Comments on SECY-94-090

I approve the staff's recommendation in SECY-94-090 to institutionalize the continuing program for regulatory improvement according to the terms of the charter included in the paper.

I would also encourage the staff to make every effort to continue to pursue proactively other MTS issues in addition to responding to petitions for rulemaking and proposals for revisions to generic documents. Also, I would encourage the staff to continue to reassess existing NRC regulatory requirements and practices as best it can with available resources.

I am very pleased with the staff's extensive efforts on this matter and express my continuing strong support for continuation of the programs.
