EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 | While shutdown for refueling LPSI pump 1B breaker was being "slow closed"
 03 | for an alignment check when the closing latch pin broke. This rendered
 04 | the breaker incapable of closing. St. Lucie Unit 1 has approximately 50
 05 | breakers of this type and in over 7 years of operation this is the first
 06 | failure of this type. There was no adverse effect on the health or
 07 | safety of the public.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 | The breaker involved in this event was a Westinghouse Porcel-line air
 11 | circuit breaker model 50DHP250. The pins from two identical breakers on
 12 | the same bus were removed and ultrasonically and dyepenetrant tested with
 13 | no indication of degradation. Because of the absence of previous failures
 14 | and the above test results, this event is considered a random failure.
