EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10) [0] [2] On March 20, 1983, with the Plant in Mode 5, a Reactor Building purge was [0] [3] initiated. The associated radiation monitor, RM-A4, was secured on March 21, 1983 [0] [4] during the operation for approximately five (5) minutes, which left the purge [0] [5] unmonitored for that time. There was no adverse consequence as a spectroscopic [0] [6] analysis of the RM-A4 particulate filter revealed no detectable radioactivity [0] [7] other than natural background levels from natural radon daughters.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27) [1] [0] Particulate accumulation on the filter caused a higher than normal radioactivity [1] [1] level reading. The RM-A4 pump and detector were secured for a filter change out. [1] [2] RM-A4 was returned to service within approximately five (5) minutes. A station [1] [3] memorandum was issued to increase personnel awareness levels in the required [1] [4] operability of RM-A4 during purging operations.
