SUBJECT: DOCKET NO. 50-333
LICENSEE EVENT REPORT: LER-91-010-01:

Emergency Diesel Generators Potentially inoperable due
to Fire Protection Deficiencies

Dear Sir:

This supplementary report is submitted in accordance with 10CFR50.73(a)(2)(ii) and (v). This is a final report which describes the root cause for the reported deficiencies and provides final analysis results for 19 ventilation fire dampers which were rendered potentially inoperable because of inadequate installation or maintenance. Analysis is also provided for emergency diesel operability concerns due to intentional long term closure of four carbon dioxide actuated fire dampers in the ventilation systems for the emergency diesel generator switchgear rooms.

Questions concerning this report may be addressed to Mr. Donald Simpson at (315) 349-6361.

Very truly yours,

HARRY P. SALMON, JR.
