Docket No. 50-366

HL-4619

U.S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington, D.C. 20555

Edwin I. Hatch Nuclear Plant - Unit 2  
Withdrawal of Schedule Change for Actions  
in Response to Generic Letter 89-10

Gentlemen:

By letter dated October 19, 1994, Georgia Power Company informed the Nuclear Regulatory Commission (NRC) staff of a potential schedule change associated with testing of motor operated valves in the Unit 2 main steam isolation valve leakage control system (MSIVLCS). By letter dated March 17, 1994, Unit 2 Technical Specifications amendment number 132 was issued which allowed for removal of the MSIVLCS. This amendment was implemented and the MSIVLCS was physically removed during the Spring 1994 Unit 2 refueling outage.

Consequently, no further NRC action is necessary in response to our letter of October 19, 1993, since the valves in question are no longer installed in the plant.

Please contact this office if you have any questions.

Sincerely,

J. T. Beckham, Jr.
