Gentlemen:

Subject: Inspection Number 82-01

This is the Testing Company's written response to the routine safety inspection conducted by Miss J. McGinnes and Mr. R. Ladun on August 18, 1982 of NRC License Number 37-15445-02 and resultant findings.

Pursuant to instructions contained in Appendix A Notice of Violation the following corrective steps have been taken:

A new radiation monitoring alarm device with appropriate switches, visual and audible warnings has been ordered and will be installed within thirty (30) days of receipt. This will be in addition to the present system of electrical, key activated, audible and visual alarms which are in place but have to be hand activated by the radiographer.

In addition, the burned out light bulb on the device at the lower area cell was replaced with a new one. We anticipate the date of full compliance to be December 1, 1982.

Sincerely,

UNITED STATES TESTING CO., INC.
